## **Chapter 1**

# Sequencer64

Author(s) Chris Ahlstrom 2016-10-23

#### 1.1 Introduction

Sequencer64 is a major cleanup, refactoring, and documentation of the Seq24 live-play MIDI sequencer.

The current document, generated by Doxygen, describes the functions, classes, modules, and other entities used in this project.

Also read the ROADMAP, README, and contrib/bugs\_to\_investigate files to understand the genesis of this project and the things that still need to be done with Sequencer64.

Also, we have pretty deeply documented *Seq24* and *Sequencer64* with PDF files that can be generated by git-cloning the following projects, installing a number of tools related to PDF and LaTeX, and running "make":

- https://github.com/ahlstromcj/seq24-doc.git
- https://github.com/ahlstromcj/sequencer64-doc.git

These project also have prebuilt PDFs should one not want to bother building them.

In the present document, we've left out a some side-code to cut down on the size of the document. Still, the resulting PDF is over 1000 pages long.

Some useful references:

2 Sequencer64

## Chapter 2

# MIDI File Parsing in Sequencer64

Author(s) Chris Ahlstrom 2016-02-13

#### 2.1 Introduction

This section describes the parsing of a MIDI file (and a few other topics). We wanted to add the reading of SMF 0 files to *Sequencer64*. We started with the main format that is supported, SMF 1. Once we understood that we, we figured out how to split a SMF 0 tracks correctly.

We split the midifile::parse() function into two sections. The first section analyzes the header of the MIDI. Then, based on whether the file is SMF 1 (the normal case) or SMF 0, either the parse\_smf\_1() function of or the parse—smf\_0() function is called. The parse\_smf\_0() function creates one sequence object per channel present in the SMF 0 file, plus the original track. The last pattern slot (sequence 16) will contain the original track data, and the rest will contain common data and then channel data for each channel. After the parsing is done, all the tracks (including the original track) will be added to the performance. The user then has the option of deleting the original track, which will be the last track.

## 2.2 SMF 1 Parsing

This section describes the parsing of the header chunk, MThd, and the track chunk, MTrk.

The midifile::parse() function starts by opening the MIDI file, getting its file-size, pre-allocating the data vector to that size, reading all of the characters into that vector, and then closing the file.

#### 2.2.1 MIDI File Header, MThd

The data of the header is read:

```
Header ID: "MThd" read_long() 4 bytes
MThd length: 6 read_long() 4 bytes
Format: 0, 1, 2 read_short() 2 bytes
No. of track: 1 or more read_short() 2 bytes
PPQN: 192 read_short() 2 bytes
```

The header ID and it's length are always the same values. The formats that Sequencer64 supports are 0 or 1. SMF 0 has only one track, while SMF 1 can support an arbitary number of tracks. The last value in the header is the PPQN value, which specifies the "pulses per quarter note", which is the basic time-resolution of events in the MIDI file. Common values are 96 or 192, but higher values are also common. Sequencer64 and its precursor, Seq24, default to 192.

#### 2.2.2 MIDI Track, MTrk

Sequencer64 next reads the tracks specified in the file. Each track is assumed to cover a different MIDI channel, but always the same MIDI buss. (The MIDI buss is not a data item in standard MIDI files, but it is a special data item in Seq24/Sequencer64 MIDI files.) Each track is tagged by a standard chunk marker, "MTrk". Other markers are possible, and are to be ignored, if nothing else. Here are the values read at the beginning of a track:

```
Track ID: "MTrk" read_long() 4 bytes
Track length: varies read_long() 4 bytes
```

The track length is the number of bytes that need to be read in order to get all of the data in the track.

Next, a new sequence object is created, with the PPQN value passed to its constructor. The sequence then is hooked to the master MIDI buss object. The "RunningTime" accumulator is set to 0 for that track.

Next, the parse() function loops through the rest of the track, reading data and logging it to the sequence. Let's go through the loop, which is the meat of the processing.

TODO: An empty event is created before track processing, and re-used for every track and event. This seems dangerous. We moved the event constructor two levels of nesting deeper, and it seems to work fine.

**Delta time**. The amount time that passes from one event to the next is the *delta time*. For some events, the time doesn't matter, and is set to 0. This values is a *variable length value*, also known as a "VLV" or a "varinum". It provides a way of encoding arbitrarily large values, a byte at a time. For now, just note that a varinum is 1 or more bytes, and MIDI provides a way to tell when the varinum is complete.

```
Delta time: varies read_varinum() 1 or more bytes
```

#### 2.2.2.1 Channel Events

**Status**. The byte after the delta time is examined by masking it against 0x80 to check the high bit. If not set, it is a "running status", it is replaced with the "last status", which is 0 at first.

```
Status byte: varies read_byte() 1 byte
```

If the high bit is set, it is a status, and is passed to the setter  $event::set\_status()$ .

The "RunningTime" accumulator is incremented by the delta-time. The current time is adjusted as per the PPQN ratio, if needed, and passed to the setter  $event::set\_timestamp()$ .

Now what does the status mean? First, the channel part of the status is masked out using the 0xF0 mask.

If it is a 2-data-byte event (note on, note off, aftertouch, control-change, or pitch-wheel), then the two data bytes are read:

```
Data byte 0: varies read_byte() 1 byte
Data byte 1: varies read_byte() 1 byte
```

If the status is a note-on event, with data[1] = 0, then it is converted to a note-off event, a fix for the output quirks of some MIDI devices, and the status of the event is amended to EVENT\_NOTE\_OFF.

If it is a 1-data-btye event (program change or channel pressure), then only data byte 0 is read.

Then the one or two data bytes are added to the event by overloads of event::set\_data(), the event is added to the current sequence by sequence::add\_event(), and the MIDI channel of the sequence is set by sequence::set\_midi\_channel().

Note that this is the point where parsing could detect a change in channel, and select a new sequence to support that channel, and add the events to that sequence, if the file were SMF 0.

Also note that the channel of the sequence is set every a new channel event/status is read. This should be done once, and then simply warned about if a non-matching channel occurs.

Lastly, note that it might be better to do the sequence function calls at the end of processing the event.

2.2 SMF 1 Parsing 5

#### 2.2.2.2 Meta Events

If the event status masks off to 0xF0 (0xF0 to 0xFF), then it is a meta event. If the status is 0xFF, it is called a "Sequencer-specific", or "SeqSpec" event. For this kind of event, then a type byte and the length of the event are read.

```
Meta type: varies read_byte() 1 byte
Meta length: varies read_varinum() 1 or more bytes
```

If the type of the SeqSpec (0xFF) meta event is 0x7F, parsing checks to see if it is one of the Seq24 "proprietary" events. These events are tagged with various values that mask off to 0x24240000. The parser reads the tag:

```
Prop tag: 0x242400nn read_long() 4 bytes
```

These tags provide a way to save and recover Seq24/Sequencer64 properties from the MIDI file: MIDI buss, MIDI channel, time signature, sequence triggers, and (new), the key, scale, and background sequence to use with the track/sequence. Any leftover data for the tagged event is let go. Unknown tags ate skipped.

If the type of the SeqSpec (0xFF) meta event is 0x2F, then it is the End-of-Track marker. The current time is set using  $sequence::set\_length()$  and then  $sequence::zero\_markers()$  is called, and parsing is done for that track.

If the type of the SeqSpec (0xFF) meta event is 0x03, then it is the sequence name. The "length" number of bytes are read, and loaded by  $sequence::set\_name()$ .

If the type of the SeqSpec (0xFF) meta event is 0x00, then it is the sequence number, which is read:

```
Seq number: varies read_short() 2 bytes
```

Note that the sequence number might be modified latter to account for the current screenset in force for a file import operation.

Anything other SeqSpec type is simply skipped by reading the "length" number of bytes.

To summarize the process, here are the relevant event and sequence setter calls typically made while parsing a MIDI track:

```
1. perform::add_sequence()
   (a) sequence::sequence()
   (b) sequence::set_master_midi_bus())
   (c) sequence::add_event()
        i. event::event()
        ii. event::set_status()
        iii. event::set_timestamp()
        iv. event::set_data()
   (d) sequence::set_midi_channel()
        (e) sequence::set_length()
        (f) sequence::set_name()
        (g) sequence::set_midi_bus()
2. xxxxx::yyyy()
```

### 2.2.3 Meta Events Summary

Here, we summarize the MIDI meta events for your edification.

```
1. FF 00 02 ssss: Sequence Number.
```

- 2. FF 01 len text: Text Event.
- 3. FF 02 len text: Copyright Notice.
- 4. FF 03 len text: Sequence/Track Name.
- 5. FF 04 len text: Instrument Name.
- 6. FF 05 len text: Lyric.
- 7. FF 06 len text: Marker.
- 8. FF 07 len text: Cue Point.
- 9. FF 08 len text: Patch/program Name.
- 10. FF 09 len text: Device Name.
- 11. FF 0A through 0F len text: Other kinds of text events.
- 12. FF 20 01 cc: MIDI channel (obsolete, used by Cakewalk)
- 13. FF 21 01 pp: MIDI port (obsolete, used by Cakewalk)
- 14. FF 2F 00: End of Track.
- 15. FF 51 03 tttttt: Set Tempo, us/qn.
- 16. FF 54 05 hr mn se fr ff: SMPTE Offset.
- 17. FF 58 04 nn dd cc bb: Time Signature.
- 18. FF 59 02 sf mi: Key Signature.
- 19. FF 7F len data: Sequencer-Specific.

The next sections describe the events that Sequencer tries to handle. These are

- Sequence Number (0x00)
- Track Name (0x03)
- End-of-Track (0x2F)
- Set Tempo (0x51) (Sequencer64 only)
- Time Signature (0x58) (Sequencer64 only)
- Sequencer-Specific (0x7F)
- System Exclusive (0xF0) Sort of handled, functionality incomplete..

#### 2.2.3.1 Sequence Number (0x00)

```
FF 00 02 ss ss
```

This optional event must occur at the beginning of a track, before any non-zero delta-times, and before any transmittable MIDI events. It specifies the number of a sequence.

2.2 SMF 1 Parsing 7

#### 2.2.3.2 Track/Sequence Name (0x03)

```
FF 03 len text
```

If in a format 0 track, or the first track in a format 1 file, the name of the sequence. Otherwise, the name of the track.

#### 2.2.3.3 End of Track (0x2F)

```
FF 2F 00
```

This event is not optional. It is included so that an exact ending point may be specified for the track, so that it has an exact length, which is necessary for tracks which are looped or concatenated.

#### 2.2.3.4 Set Tempo Event (0x51)

The MIDI Set Tempo meta event sets the tempo of a MIDI sequence in terms of the microseconds per quarter note. This is a meta message, so this event is never sent over MIDI ports to a MIDI device.

After the delta time, this event consists of six bytes of data:

```
FF 51 03 tt tt tt
```

#### Example:

```
FF 51 03 07 A1 20
```

- 1. 0xFF is the status byte that indicates this is a Meta event.
- 2. 0x51 the meta event type that signifies this is a Set Tempo event.
- 3. 0x03 is the length of the event, always 3 bytes.
- 4. The remaining three bytes carry the number of microseconds per quarter note. For example, the three bytes above form the hexadecimal value 0x07A120 (500000 decimal), which means that there are 500,000 microseconds per quarter note.

Since there are 60,000,000 microseconds per minute, the event above translates to: set the tempo to 60,000,000 / 500,000 = 120 quarter notes per minute (120 beats per minute). This is a 24-bit binary value, so each byte covers the full range of 0x00 to 0xFF.

This event normally appears in the first track. If not, the default tempo is 120 beats per minute. This event is important if the MIDI time division is specified in "pulses per quarter note", which does not itself define the length of the quarter note. The length of the quarter note is then determined by the Set Tempo meta event.

Representing tempos as time per beat instead of beat per time allows absolutely exact DWORD-term synchronization with a time-based sync protocol such as SMPTE time code or MIDI time code. This amount of accuracy provided by this tempo resolution allows a four-minute piece at 120 beats per minute to be accurate within 500 usec at the end of the piece.

We have now added the Tempo meta event (and the Time Signature meta event) to the track, which allows other sequencers to obtain these values from a Sequencer64 MIDI file. Here are the original headers for a normal MIDI file and its legacy (Seq24) conversion, as shown by the midicvt application:

```
hymne.asc
                                        hymne-ppqn-384.asc
MThd 1 4 96
                                        MThd 1 4 384
                                        MTrk
0 Meta SeqName "Vangelis: Hymne"
                                        0 SeqNr 0
0 TimeSig 4/4 24 8
                                        0 Meta SeqName "Vangelis: Hymne"
                                       0 SeqSpec 24 24 00 08 (no triggers)
0 SeqSpec 24 24 00 01 00 (MIDI buss 0)
0 Tempo 750000
0 Meta TrkEnd
                                        0 SeqSpec 24 24 00 06 04 04 (beats, width)
TrkEnd
                                        0 SeqSpec 24 24 00 02 00 (MIDI ch. 0)
                                        96 Meta TrkEnd
                                        TrkEnd
```

Here is the header data that result from the new conversion, which is used if the "legacy" option is not in force:

```
MThd 1 4 192
MTrk
0 SeqNr 0
0 Meta SeqName "Vangelis: Hymne"
0 TimeSig 4/4 24 8
0 Tempo 750000
0 SeqSpec 24 24 00 08
0 SeqSpec 24 24 00 01 00
0 SeqSpec 24 24 00 06 04 04
0 SeqSpec 24 24 00 02 00
48 Meta TrkEnd
TrkEnd
```

#### 2.2.3.5 Time Signature Event (0x58)

After the delta time, this event consists of seven bytes of data:

```
FF 58 04 nn dd cc bb
```

The time signature is expressed as four numbers. nn and dd represent the numerator and denominator of the time signature as it would be notated. The numerator counts the number of beats in a measure (beats per measure or beats per bar). The denominator is a negative power of two: 2 represents a quarter-note, 3 represents an eighthnote, etc. The denominator specifies the unit of the beat (e.g. 4 or 8). In Seq24/Sequencer64, this value is also called the "beat width".

The CC parameter expresses the number of MIDI clocks (or "ticks", or "pulses") in a metronome click. The standard MIDI clock ticks 24 times per quarter note, so a value of 6 would mean the metronome clicks every 1/8th note. A CC value of 6 would mean that the metronome clicks once every 1/8th of a note (quaver). This MIDI clock is different from the clock (PPQN) that determines the start time and duration of the notes.

The bb parameter expresses the number of notated 32nd-notes in a MIDI quarter note (24 MIDI Clocks). The usual value for this parameter is 8, though some sequencers allow the user to specify that what MIDI thinks of as a quarter note, should be notated as something else. For example, a value of 16 means that the music plays two quarter notes for each quarter note metered out by the MIDI clock, so that the music plays at double speed.

#### Examples:

```
FF 58 04 04 02 18 08
```

- 1. 0xFF is the status byte that indicates this is a Meta event.
- 2. 0x58 the meta event type that signifies this is a Time Signature event.

2.2 SMF 1 Parsing 9

- 3. 0x04 is the length of the event, always 4 bytes.
- 4. 0x04 is the numerator of the time signature, and ranges from 0x00 to 0xFF.
- 5. 0x02 is the log base 2 of the denominator, and is the power to which 2 must be raised to get the denominator. Here, the denominator is 2 to 0x02, or 4, so the time signature is 4/4.
- 6. 0x18 is the metronome pulse in terms of the number of MIDI clock ticks per click. Assuming 24 MIDI clocks per quarter note, the value here (0x18 = 24) indidicates that the metronome will tick every 24/24 quarter note. If the value of the sixth byte were 0x30 = 48, the metronome clicks every two quarter notes, i.e. every half-note.
- 7. 0x08 defines the number of 32nd notes per beat. This byte is usually 8 as there is usually one quarter note per beat, and one quarter note contains eight 32nd notes.

A time signature of 6/8, with a metronome click every 3rd 1/8 note, would be encoded:

```
FF 58 04 06 03 24 08
```

Remember, a 1/4 note is 24 MIDI Clocks, therefore a bar of 6/8 is 72 MIDI Clocks. Hence 3 1/8 notes is 36 (=0x24) MIDI Clocks.

There should generally be a Time Signature Meta event at the beginning of a track (at time = 0), otherwise a default 4/4 time signature will be assumed. Thereafter they can be used to effect an immediate time signature change at any point within a track.

For a format 1 MIDI file, Time Signature Meta events should only occur within the first MTrk chunk.

If a time signature event is not present in a MIDI sequence, 4/4 signature is assumed.

In Sequencer64, the c\_timesig SeqSpec event is given priority. The conventional time signature is used only if the c\_timesig SeqSpec is not present in the file. NEEDS TO BE TESTED.

```
2.2.3.6 SysEx Event (0xF0)
```

If the meta event status value is 0xF0, it is called a "System-exclusive", or "SysEx" event.

```
F0 len data F7
```

Sequencer64 has some code in place to store these messages, but the data is currently not actually stored or used. Although there is some infrastructure to support storing the SysEx event within a sequence, the SysEx information is simply skipped. Sequencer64 warns if the terminating 0xF7 SysEx terminator is not found at the expected length. Also, some malformed SysEx events have been encountered, and those are detected and skipped as well.

#### 2.2.3.7 Sequencer Specific (0x7F)

This data, also known as SeqSpec data, provides a way to encode information that a specific sequencer application needs, while marking it so that other sequences can safely ignore the information.

```
FF 7F len data
```

In *Seq24* and *Sequencer64*, the data portion starts with four bytes that indicate the kind of data for a particular SeqSpec event:

In Seq24, these events are placed at the end of the song, but are not marked as SeqSpec data. Most MIDI applications handle this situation fine, but some (e.g. midicvt) do not. Therefore, Sequencer64 makes sure to wrap each data item in the 0xFF 0x7F wrapper.

Also, the last three items above (key, scale, and background sequence) can also be stored (by *Sequencer64*) with a particular sequence/track, as well as at the end of the song. Not sure if this bit of extra flexibility is useful, but it is there.

#### 2.2.3.8 Non-Specific End of Sequence

Any other statuses are deemed unsupportable in Sequencer64, and abort parsing with an error.

If the —bus option is in force, sequence::set\_midi\_bus() is called to override the buss number (if any) stored with the sequence.

Finally,  $perform::add\_sequence()$  adds the sequence to the encoded tune.

## 2.3 SMF 0 Parsing

After parsing SMF 1 track data, we end up with a number of sequences, each on a different MIDI channel. With SMF 0, data for all channels is present in a single track. Sequencer64 will read SMF 0 data, but we really need to be able to have one MIDI channel per track. So we need to take the data from the sequence and use it to make more sequences.

```
sequence::add_event().
sequence::set_midi_channel().
sequence::set_length().
sequence::set_midi_bus().
perform::add_sequence().
```

This code basically works. For now, please look at the source code for more details. Also, the reading of SMF 0 MIDI files is described in the *sequencer64-doc* project on GitHub.

2.4 Running Status

## 2.4 Running Status

When we apply the midicvt application to a file saved by Sequencer64, we can end up with a successful ASCII conversion that ends with an error message:

```
$ midicvt hymne-seq64.midi -o hymne-seq64.asc
? Error at MIDI file offset 12155 [0x2f7b]
Error: Garbage at end 'readtrack(): unexpected running status'
```

Is this a problem in midicvt or Sequencer4? Let's learn about running status.

Running status is a way to speed up the sending of MIDI bytes to a synthesizer or sequencer by taking advantage of redundancy where possible. For example, if we're sending a consecutive group of Note On and Note Off messages to a particular channel, we can save some time by not sending the channel status byte after the first time. Here's an example with Note On on channel 1:

```
0x90 3C 7F
0x90 40 7F
0x90 43 F3
```

Since no change in status occurs after the first of these three events, we can drop the subsequent status bytes:

```
0x90 3C 7F
40 7F
43 F3
```

The 0x90 byte is saved in a "running status buffer" (RSB), and is filled in by the receiving device.

Here is the sequence of events for operating with running status.

- 1. Clear the RSB buffer (RSB = 0) to start.
- 2. If a **Voice Category Status** (VCS) byte is received, then set RSB = VCS. VCS bytes range from 0x80 to 0xEF. This is binary 1000000 to 11100000.
- 3. If a data byte is received (data bytes range from 0x00 to 0x7F, binary 0000000 to 0111111; that is, bit 7 is always 0 in a data byte):
  - (a) If RSB != 0, first insert the RSB into the incoming data stream, then insert the data byte.
  - (b) If RSB == 0, then just insert the data byte into the incoming data stream.
- 4. Clear the RSB buffer (RSB = 0) when a System Common Message (SCM) status byte is received. SCM bytes range from 0xF0 to 0xF7.
- 5. The message after an SCM must begin with a status byte. That is a byte with bit 7 set.
- 6. Do no special action when a Realtime Category Message (RCM) byte is received. RCM bytes range from 0xF8 to 0xFF.

Note that some events, such as Tempo, assume that its bytes are all data bytes.

## **Chapter 3**

# JACK, Live, and Song Modes in Sequencer64

Author(s) Chris Ahlstrom 2016-08-18

#### 3.1 Introduction

This section describes the interactions between JACK settings and the Live/Song Mode settings, with an eye to describing the proper behavior of Sequencer64 with JACK settings, how the Live/Song modes are supposed to work, and what bugs or issues remain in Sequencer64's JACK handling.

I'm not sure why Doxygen is applying the "code" font so often here. Weird, annoying.

#### 3.2 JACK Functions

Please study the following URL and note these important points:

http://jackaudio.org/files/docs/html/transport-design.html

- The timebase master continuously updates position information, beats, timecode, etc. There is at most one
  master active at a time. If no client is registered as timebase master, frame numbers will be the only position
  information available.
- The timebase master registers a callback that updates position information while transport is rolling. Its output affects the following process cycle. This function is called immediately after the process callback in the same thread whenever the transport is rolling, or when any client has set a new position in the previous cycle.
- Clients that don't declare a sync callback are assumed ready immediately, anytime the transport wants to start. If a client doesn't require slow-sync processing, it can set its sync callback to NULL.
- The transport state is always valid; initially it is JackTransportStopped.
- When someone calls <code>jack\_transport\_start()</code>, the engine resets the poll bits and changes to a new state, <code>JackTransportStarting</code>.
- · When all slow-sync clients are ready, the state changes to JackTransportRolling.

Does Sequencer64 need a latency callback?

http://jackaudio.org/files/docs/html/group\_\_ClientCallbacks.html

(We need to see why most of the following is in a monospaced font. Is there a new Doxygen feature?)

Here are summaries of the JACK functions used in the jack\_assistant module:

### 3.2.1 jack\_client\_open()

```
Open a client session with a JACK server. More complex and powerful than <tt>jack_client_new()</tt>.

Clients choose which of several servers to connect, and how to start the server automatically, if not already running. There is also an option for JACK to generate a unique client name.

const char * client_name, jack_options_t options, jack_status_t * status,
```

client\_name of at most jack\_client\_name\_size() characters. The name scope is local to each server. Unless forbidden by the JackUseExactName option, the server will modify this name to create a unique variant, if needed.

options formed by OR-ing together JackOptions bits. Only the JackOpenOptions bits are allowed.

status (if non-NULL) an address for JACK to return information from the open operation. This status word is formed by OR-ing together the relevant JackStatus bits.

Optional parameters: depending on corresponding [options bits] additional parameters may follow status (in this order).

[JackServerName] (char \*) server\_name selects from among several possible concurrent server instances. Server names are unique to each user. If unspecified, use "default" unless \$JACK\_DEFAULT\_SERVER is defined in the process environment.

#### Returns:

Opaque client handle if successful. If this is NULL, the open operation failed, and \*status includes JackFailure, and the caller is not a JACK client.

#### 3.2.2 jack\_on\_shutdown()

Registers a function to call when the JACK server shuts down the client thread. It must be an asynchonrous POSIX signal handler: only async-safe functions, executed from another thread. A typical function might set a flag or write to a pipe so that the rest of the application knows that the JACK client thread has shut down. Clients do not need to call this function. It only helps clients understand what is going on. It should be called before <tt>jack\_client\_activate()</tt>.

## 3.2.3 jack\_set\_sync\_callback()

Register/unregister as a slow-sync client; it can't respond immediately to transport position changes. The callback is run at the first opportunity after registration: if the client is active, this is the next process cycle, otherwise it is the first cycle after <tt>jack\_activate()</tt>. After that, it runs as per JackSyncCallback rules. Clients that don't set this callback are assumed ready immediately any time the transport wants to start.

3.2 JACK Functions 15

#### 3.2.4 jack\_set\_process\_callback()

Tells the JACK server to call the callback whenever there is work. The function must be suitable for real-time execution, it cannot call functions that might block for a long time: malloc(), free(), printf(), pthread\_mutex\_lock(), sleep(), wait(), poll(), select(), pthread\_join(), pthread\_cond\_wait(), etc. In the current class, this function is a do-nothing function.

#### 3.2.5 jack set session callback()

Tells the JACK server to call the callback when a session event is delivered. Setting more than one session callback per process is probably a design error. For a multiclient application, it's more sensible to create a JACK client with only one session callback.

## 3.2.6 jack\_activate()

Tells the JACK server that the application is ready to start processing.

#### 3.2.7 jack release timebase()

**TODO** 

#### 3.2.8 jack client close()

TODO

## 3.2.9 jack\_transport\_start()

Starts the JACK transport rolling. Any client can make this request at any time. It takes effect no sooner than the next process cycle, perhaps later if there are slow-sync clients. This function is realtime-safe. No return code.

#### 3.2.10 jack\_transport\_stop()

## 3.2.11 jack\_transport\_locate()

Repositions the transport to a new frame number. May be called at any time by any client. The new position takes effect in two process cycles. If there are slow-sync clients and the transport is already rolling, it will enter the JackTransportStarting state and begin invoking their sync\_callbacks until ready. This function is realtime-safe.

#### 3.2.12 jack\_transport\_reposition()

```
Request a new transport position. May be called at any time by any client. The new position takes effect in two process cycles. If there are slow-sync clients and the transport is already rolling, it will enter the JackTransportStarting state and begin invoking their sync_callbacks until ready. This function is realtime-safe. This call, made in the position() function, is currently disabled.
```

#### 3.2.13 jack transport query()

Query the current transport state and position. This function is realtime-safe, and can be called from any thread. If called from the process thread, pos corresponds to the first frame of the current cycle and the state returned is valid for the entire cycle.

The first parameter is the client, which is a pointer to the JACK client structure.

The second parameter is a pointer to structure for returning current transport position; pos->valid will show which fields contain valid data. If pos is NULL, do not return position information.

This function returns the current transport state.

## 3.3 Modes Operation

#### 3.3.1 No JACK, Live Mode

In ~/.config/sequencer64/sequencer64.rc, set:

- jack\_transport = 0
- jack\_master = 0
- jack master cond = 0
- song\_start\_mode = 0

By changing the start mode to 0 (false), Sequencer64 is put into Live Mode. With this setting, control of the muting and unmuting of patterns resides in the main window (the patterns window). One can start the playback in the performance (song) window, but it will not affect which patterns play, at all.

Note that this option is part of the File / Options / JACK/LASH configuration page.

#### 3.3.2 No JACK, Song Mode

In  $\sim$ /.config/sequencer64/sequencer64.rc, set:

- jack\_transport = 0
- jack master = 0
- jack\_master\_cond = 0
- song\_start\_mode = 1

By changing the start mode to 1 (true), Sequencer64 is put into Song Mode.

With this setting, control of the muting and unmuting of patterns resides in the song window (the performance window). The patterns shown in the pattern slots of the main window turn on and off whenever the progress bar is in the pattern as drawn in the perforance window.

Note that this option is part of the File / Options / JACK/LASH configuration page.

3.4 Breakage 17

#### 3.3.3 JACK Transport

In ~/.config/sequencer64/sequencer64.rc, set:

- jack\_transport = 1
- jack\_master = 0
- jack master cond = 0
- song\_start\_mode = 0 or 1 (see previous section)

The current behavior is that gjackctl and sequencer64 playback/progress seem to be independent of each other.

The workaround seems to be to set seq24/sequencer64 as JACK Master, or if another application (e.g. Qtractor) is JACK Master.

#### OLD BEHAVIOR:

```
Start qjackctl, verify that it sets up correctly, then click it's
"play" button to start the transport rolling. Run sequencer64, load a
file. Then note that starting playback (whether in the main window or
in the performance window) is ineffective, but resets the time counter
in qjackctl. Why? With JACK sync enabled by the macro:

[JACK transport slave]
    jack sync(): zero frame rate [single report]!?

[JackTransportRolling]
```

[JackTransportStarting] (every time space bar pressed)

END OF OLD BEHAVIOR.

## 3.4 Breakage

Old message about seq24 being broken:

[Start playback]

 $\verb|http://lists.linuxaudio.org/pipermail/linux-audio-user/2010-November/073848. \leftarrow \verb|html||$ 

```
i dont see the transport synchronisation working with a jackl svn version. you are still using only a sync callback.

and you are relying on the transport to go through the JackTransportStarting state.

this issue should be fixed.
iirc we came to the conclusion, that seq24 is broken, and we will not revert the changes in jack, which break it.

the quick and dirty fix on your side, would be to register an empty process_callback.

but the issue still remains. seq24 is NOT a slow sync client. but it registers a sync_callback.
and it even takes a lock in the sync callback.

the patch for jack-session support didnt get merged either.
```

## Another one (no need for a URL):

I use seq24 for the majority of my projects but it isn't ideal (I should point out that I never finish anything). I don't like seq24's pianoroll editor, the way you do CC envelopes isn't ideal, it uses alsa-midi, there's unnecessary complexity in switching from pattern-trigger mode to song mode, and its insistence on being transport master while not even being able to adjust tempo when live is annoying

## Chapter 4

# **User Testing of Sequencer64 with Yoshimi**

Author(s) Chris Ahlstrom 2016-03-04

#### 4.1 Introduction

This section describes user testing of Sequencer64 using Yoshimi. It will expand as we work our way through all the many use-cases that can be achieved with Sequencer64 and Yoshimi.

Please note that the most advanced and recent testing can be found currently in the document contrib/notes/jack-testing txt. We will eventually merge the final tests here... someday.

## 4.2 Smoke Test

Every so often we run Sequencer64 with a software synthesizer to make sure we haven't broken any functionality via our major refactoring efforts. We call it a "smoke test". We fire up the two application, and see if anything smokes.

This smoke test sets up Yoshimi with a very simple ALSA setup, and no instruments are loaded. Instead, only the "Simple Sound" is used on all channels. We've been doing this test with Yoshimi 1.3.6. The current Debian Sid ("testing") version of Yoshimi is 1.3.6-2, pulled from SourceForge. It seems to have issues, so we've been cloning and pulling the code from:

```
https://github.com/Yoshimi/yoshimi.git
```

After getting the application build and installed, the next step is to run it, using ALSA for MIDI and for audio:

```
$ yoshimi -a -A &
```

Next, fix up the configuration files for Sequencer64,  $\sim$ /.config/sequencer64/sequencer64.rc and  $\sim$ /.config/sequencer64/sequencer64.usr.

First hide sequencer64.usr somewhere, or delete it, as it will determine what MIDI devices are available, and we don't want that (yet). Second, make sure that sequencer64.rc makes the following setting:

```
[manual-alsa-ports]
# Set to 1 if you want sequencer64 to create its own ALSA ports and
# not connect to other clients
0  # number of manual ALSA ports
```

Next, run the newly-built version of Sequencer64. If desired, use the –bus option described below to force the buss number to the buss you need, as shown in the second version of the command:

```
$ sequencer64/sequencer64 &
$ sequencer64/sequencer64 --bus 5 &
```

In File / Options / MIDI Clock, observe the MIDI inputs made available by your system. Our system shows:

```
[0] 14:0 (Midi Through Port-0)

[1] 128:0 (TiMidity port 0)

[2] 128:0 (TiMidity port 1)

[3] 128:0 (TiMidity port 2)

[4] 128:0 (TiMidity port 3)

[5] 129:0 (input)
```

For some reason (a bug in Yoshimi?), input "[5]" doesn't indicate that it is Yoshimi, but it is. Take note of that input number... that is the MIDI buss number that is needed to drive Yoshimi.

Also make sure that of the clock settings for those busses are "Off".

The next instruction still works, but it is easier to simply pass the option -bus 5 to Sequencer64 when starting it up.

Now open the file sequencer64/contrib/midi/b4uacuse-GM-format.midi in Sequencer64. For all of the patterns (slots) that have lots of data in them, right click on the pattern and select *Midi Bus / [5] 129:0 (input)* and the desired channel number. (Doesn't matter much, just use up the lower channel numbers first).

Back in Yoshimi, select each Part corresponding to the channels you selected. Make sure *Enabled* is checked for each desired channel.

Back in Sequencer64, click on each pattern you want to hear, which highlights them in black. Now click the play button (green triangle). The song should play, with each part using the "Simple Sound". Not too bad for a bunch of sine waves, eh?

Now we can test the application more fully. Note that the instructions here are very light. Detailed instructions on the usage of Sequencer64 can be found in the following project, which contains a PDF file and the LaTeX code used to build it:

```
https://github.com/ahlstromcj/sequencer64-doc.git
```

Although it applies to an earlier version of the project, it still mostly holds true for Sequencer64.

## 4.3 Tests in the Patterns Window

The Patterns window is the inside portion of the main window, supported by the mainwid class. it contains a grid of boxes or slots, with each slot potentially containing a pattern, sequence, or track. Empty tracks (i.e. tracks that contain no events, like title-only tracks) are highlighted in yellow.

This window supports only a single variant of mouse-handling.

#### 4.3.1 Button Clicks on a Pattern

A left-click on a pattern slot should cause the following to happen:

- 1. The pattern will be highlighted (white on a black background). This won't occur until the button is released.
- 2. During playback, the pattern will emit MIDI events and play its sequence.
- 3. If the pattern is dragged to another slot, whether playing is in progress or not, releasing the button in the destination slot will move the pattern to that slot.

A right-click on a pattern slot should cause the following to happen:

- 1. If the pattern is empty, then a pop-up menu to make a New pattern, paste a pattern, or make other selections will appear.
- 2. If the pattern is active, then a pop-up menu to Edit the pattern or make other selections will appear.
- 3. A second right-click, just off the menu, will dismiss the menu.

### 4.3.2 Patterns Window Key Shortcuts

First, note the selection of the File / Options / Keyboard / Show keys option. The tests here should work whether or not it is selected. The only difference is if the keys are shown.

We got a segfault during this test, when we weren't being systematic about it.

### 4.3.3 The Sequencer64 User File

To be discussed.

# 4.4 Tests Using Valgrind

Valgrind is a very useful tool for unearthing memory issues and other issues in an application, especially when one has the source code and can build the code with debugging information.

One runs the application from the command line, preceding its command line with valgrind and some of its options.

### 4.4.1 Valgrind Suppressions

One problem with valgrind is that it also uncovers errors in system libraries that one has no control over. These errors clutter the output, so we suppress them using a valgrind "suppressions" file. Here's how to create one:

```
$ valgrind --gen-suppressions=yes --log-file=val.supp ./Sequencer64/sequencer64
$ valgrind --gen-suppressions=all --log-file=val.supp ./Sequencer64/sequencer64
```

As the program runs, one is asked to print a suppression. If the error is due to a system or third-party library, answer "Y return", and then copy-and-paste the suppression to a file, giving it a name. For example, we provide a file contrib/seq64.supp containing suppressions of errors that annoy us. There are way too many "errors" in ALSA, GTK+, gtkmm, glibc, and more.

The second command collects all the suppressions. Passing the val.supp file through sed makes it immediately usable:

```
$ sed -i -e /^==/g val.supp
```

Running valgrind like this then shows mostly the errors we care about:

```
$ valgrind --suppressions=val.supp ./Sequencer64/sequencer64
```

We've added some other suppression files to the contrib directory. Too much! For example:

```
https://github.com/dtrebbien/GNOME.supp
```

However, overall this process is very painful, and we're going to eventually do all the valgrind work on the unit-test project for Sequencer64:

```
https://github.com/ahlstromcj/seq64-tests
```

## 4.4.2 Full Valgrind Leak-Checking

Here's how to capture errors, while suppressing the system errors and while generating a log file:

```
$ valgrind --suppressions=contrib/seq64.supp --leak-check=full \
    --track-origins=yes --log-file=valgrind.log --show-leak-kinds=all \
    ./Sequencer64/sequencer64
```

The errors can be also be re-routed to a log-file via the "2> valgrind.log" shell redirection.

Another idea is to precede the valgrind command with the following construct:

```
$ G_SLICE=debug-blocks valgrind ...
```

G\_SLICE=debug-blocks will turn off gtk's advanced memory management to allow valgrind to show correct results. This results in an amazing plethora or invalid read and invalid write errors in GNOME-related libraries. Sheesh!

And don't forget about Valgrind's "massif" memory-tracking tool! (More to come!)

#### 4.4.2.1 Leak-Checking Basic Operation

For the first pass, just run Sequencer64, then immediately exit. Then scan the log file to see if any "errors" can be pinpointed to the application and library code.

Don't forget to run the same scenario without valgrind, in a console window, to see if any of our own debug/problem output occurs.

In any case, leakage tagged as "still reachable" isn't as bad as leakage tagged as "definitely lost" or "indirectly lost".

But good luck finding a Sequencer64 bug buried in the chaff of 3rd-party valgrind reports, even with some suppressions enabled. Apparently a lot of them have to do with data structures that are intended to last the full life of the application.

One can make the search a little easier by searching for the "seq64" namespace in the valgrind log.

# 4.5 Specific Fault Debugging

This section goes through specific debugging cases we encountered. They should be part of the regular testing of Sequencer64.

## 4.6 Snipping of a MIDI file.

In order to have a test file for the *seq64-tests* project, we loaded up the b4uacuse-GM-format.midi file, removed all but four of the tracks, and saved it as b4uacuse-snipped.midi. Loading this file into Sequencer64 caused the following:

```
$ ./Sequencer64/sequencer64
[Reading user configuration /home/ahlstrom/.config/sequencer64/sequencer64.usr]
[Reading rc configuration /home/ahlstrom/.config/sequencer64/sequencer64.rc]
get_sequence(): m_seqs[4] not null
Segmentation fault
```

First step, fire up a debugger and see what happened. We use cgdb, a text-based front-end for gdb with a "vi" feel.

```
$ cgdb ./Sequencer64/sequencer64
```

Just hit "r", do File / Open, navigate to b4uacuse-snipped.midi, select it, and watch what happens.

The "bt" (backtrace) command shows a pretty large stack, 52 items. Page up to the top of the stack, and select frame 1 ("fr 1"). This shows a mutex at a very low address, 0x650! Frame 2 shows we are in the automutex constructor, calling lock() on that same badly-located mutex. Frame 3 is in sequence::event\_count(), same bad mutex, and the m\_events member is at address 0x0. Obviously, we're dealing with an unallocated sequence.

Frame 4 is in mainwid::draw\_sequence\_on\_pixmap(), just after we've retrieved the next sequence via perform ::get\_sequence(4). But that would be the fifth sequence (the sequence numbers start at 0), and we snipped all but 4 from the file before we saved it.

So, one thing we need to do is *check* the value returned by get\_sequence() before we try to use it. The other thing to do is figure out how we got to the fifth sequence, and fix that code as well. Using the command "p perf().  $\leftarrow$  sequence\_count()", we verify that there are indeed only 4 sequences allocated.

Frame 5 is in mainwid::draw\_sequences\_on\_pixmap(). That function tries to load all sequences on the current screen-set, from 0 to 31, without checking to see how many their actually are. Inefficient and dangerous.

Frame 6 is in mainwid::reset(). We could pass perf().sequence\_count() here for checking, or get it in mainwid ::draw\_sequences\_on\_pixmap().

Before we fix this issue, we need to load a file that works, to see why it does not fail for most files. We will put a breakpoint at the top mainwid::draw\_sequences\_on\_pixmap().

We hit the breakpoint before even loading a file, with a sequence\_count() of 0. The call to valid\_sequence(0) passes the test. We may want to make valid\_sequence() take the sequence\_count() into account. But the call to perf().is\_active(0) prevents anything bad from happening at startup time.

Once we load a good file, the sequence\_count() is 14 in mainwid::draw\_sequences\_on\_pixmap(). We turn on the display of "offset" using the command "display offset", and "c" (for "continue") until offset = 14, which means we are beyond that last sequence. That bad access is prevented by perf().is active(14).

So the fundamental problem is that perf().is\_active(4) is not protecting the access when we load the "bad file". We need to find and fix that issue before papering over the problem with better access checks.

Start again, putting a breakpoint in the call to "new sequence(m\_ppqn)" in midifile. This call sets up some members and clears the list of 256 playing notes. Add another breakpoint at "a\_perf.add\_sequence()" to see what's happening there.

What we find is that the first two tracks have proper sequence numbers as read from the MIDI file, 0 and 1. But the third one preserves the number from the old file, 4. We have a disjunction between the track number and the sequence number, a conceptual problem. We can leave it as is, and beef up the error-checking, or replace the sequence number with the track number when loading the file. What to do?

- Make sure that the is-active flag for all sequences is "false", that the pointers are always null, and make sure to test both of these items (depending on context) before doing anything with the sequence.
- Convert the sequence number to the track number upon saving the MIDI file, or upon reading the MIDI file, and use that number when adding the sequence to the perform object. This might affect some seq24/sequencer64 functionality, however. It's big move.

We need information on reading and importing.

First, if we look at a file that we created long ago by importing b4uacuse.mid, b4uacuse-GM-format.  $\leftarrow$  midi, it has its fourteen sequence numbers identical to their track numbers. No problem.

Second, if we just read b4uacuse.mid, a non-seq24-created MIDI file, we see that each of its tracks have no sequence number – they are all zero. The perform::add\_sequence() simple iterates from the beginning of m\_seqs[] until it finds an inactive m\_seqs[i], and uses that element to hold the sequence pointer.

But now it also segfaults! Let's fix all the non-checked get\_sequence() calls right away, it is too big an issue to ignore.

In the end, we have to be aware that a screen-set can have blank (null) slots interspersed amongst the active slots.

# **Speed Issue of Sequencer64**

Author(s) Chris Ahlstrom 2016-11-05

#### 5.1 Introduction

This section describes some speed issues of Sequencer64. Early on in our reboot of *seq24*, we noticed that some of our larger files took a noticeable time to load. It was only a few seconds, but seemed like a long time for such small files.

Then we noticed that the MIDI container implementation used the std::list container, and also that it called std::list::sort() after each event was added to the container.

Our first thought was to replace the std::list with an std::multimap. Insertions into this container are made in the appropriate location (rather than at the end), and so are automatically sorted. We kept the old code around, but enabled the new multimap code via the SEQ64\_USE\_EVENT\_MAP macro. This decreased the time of loading.

(It also exposed a small number of bugs that users of Sequencer64 discovered and fixed.)

At the back of our minds was the possibility that the longer time needed to increment a multimap iterator versus a list iterator would prove to limit the amount of data that could be played back. Once we finally created a large file, b4uacuse-stress.midi, a 1.5 Mb file, we experienced the limitations of that iterator during playback. On our main development laptop, a near-gaming Intel i7 machine, there were minor artifacts in playback. On our old single-core laptop with 32-bit Debian installed, the sequence would not play, and would continually and visibly refresh the main window display.

So then we re-enabled the old seq24 list implementation, and found that the time needed to load b4uacuse-stress.midi was over 6 minutes on our near-gamer laptop and 13 minutes on the single-core laptop.

So, we had to find a way to get the fast loading speed of the std::multimap and the faster speed of the std::list iterator. The obvious way was to go back to the std::list container and stop sorting the container after every insert, when loading the file.

This worked, but had some side-effects that had to be fixed. We found that the sequence::verify\_and\_cink function required that the container be sorted first, and so we had to find the places where that function was called, and make sure that the sorting had occurred.

Anyway, the current configuration for the usage of std::multimap versus std::list and the sorting of the MIDI container after every event insertion versus after all the events are loaded are deterimined only in libseq64/include/seq64\_features.h:

```
#undef SEQ64_USE_EVENT_MAP
#undef SEQ64_PRESORT_EVENT_CONTAINER
#ifdef SEQ64_USE_EVENT_MAP
#undef SEQ64_PRESORT_EVENT_CONTAINER
#endif
```

Currently, the default is, as shown above, to not use the event multimap, and to not presort events. This makes loading fast, and playback able to handle more sequences. One can also try to use the multimap, or use the list with pre-sorting, if bugs appear when building the application with the default setting. However, we really want to get the post-sorted list implementation to work, to get fast loading speed and higher throughput at the same time.

The other options are available as a fallback in case one gets struck by bugs in the default, and can afford slower loads or less throughput.

# Licenses

Library This application and its libraries, sub-applications, and documents.

Author(s) Chris Ahlstrom 2015-09-10

## 6.1 License Terms for the This Project.

Wherever the tag \$XPC\_SUITE\_GPL\_LICENSE\$ appears, or wherever reference to the GPL licensing scheme (any version) is mentioned, substitute the appropriate license text, depending on whether the project is a library, application, documentation, or server software. We're not going to include paragraphs of licensing information in every module; you are responsible for coming here to read the licensing information.

These licenses apply to each sub-project and file artifact in the project with which this license description was packaged.

Wherever the term **XPC** is encountered in this project, it refers to my projects, which go beyond the package that contains this document.

# 6.2 XPC Application License

The **XPC** application license is either the **GNU GPLv2**. or the **GNU GPLv3**. Generally, projects that originate with me use the latter language, while projects I have extended may specify the former license.

At the present time, no XPC project uses the "Affero" license.

## 6.6 XPC License Summary

Include one of these licenses in your Doxygen documentation with one of the following Doxygen tags specified above:

```
\ref gpl_license_subproject
\ref gpl_license_application
\ref gpl_license_library
\ref gpl_license_documentation
\ref gpl_license_affero
```

For more information on navigating GNU licensing, see this page:

```
http://www.gnu.org/licenses/
```

Copies of these licenses (and some logos) are provided in the licenses directory of the main project (or you can search for them at *gnu.org*).

30 Licenses

# **Todo List**

#### File calculations.cpp

There are additional user-interface and MIDI scaling variables in the perfroll module that we need to move here.

#### File perfnames.cpp

When bringing up this dialog, and starting play from it, some extra horizontal lines are drawn for some of the sequences. This happens even in seq24, so this is long standing behavior. Is it useful, and how? Where is it done? In perfroll?

#### Global seq64::editable events::save events ()

Consider what to do about the sequence::m is modified flag.

### Global seq64::eventedit::handle\_save ()

Could also support writing the events to a new sequence, for added flexibility.

### Global seq64::mainwid::timeout ()

We should use this callback to display the current time in the playback.

# Global seq64::mainwnd::mainwnd (perform &p, bool allowperf2=true, int ppqn=SEQ64\_USE\_DEFAULT\_← PPQN)

Offload most of the work into an initialization function like options does; make the perform parameter a reference; valgrind flags m\_tooltips as lost data, but if we try to manage it ourselves, many more leaks occur.

#### Global seq64::mainwnd::on\_key\_release\_event (GdkEventKey \*ev)

Test this functionality in old and new application.

# Global seq64::perfedit::perfedit (perform &p, bool second\_perfedit=false, int ppqn=SEQ64\_USE\_DEFAU← LT\_PPQN)

Offload most of the work into an initialization function like options does.

#### Global seq64::perform::add\_sequence (sequence \*seq, int perf)

Shouldn't we wrap around the sequence list if we can't find an empty sequence slot after prefnum?

This function needs some deeper analysis against the original, in my opinion.

### Global seq64::perform::m\_seqs [c\_max\_sequence]

First, make the sequence array a vector, and second, put allof these flags into a structure and access those members indirectly.

#### Global seq64::perform::pop\_trigger\_undo()

Look at seq32/src/perform.cpp and the perform :: push\_trigger\_undo(track) function, which has a track parameter that has a -1 values the supports all tracks. It requires two new vectors (one for undo, one for redo), two new flags (likewise). We've put this code in place, no longer macroed out, now permanent.

#### Global seq64::perform::set\_left\_tick (midipulse tick, bool setstart=true)

The perform::m\_one\_measure member is currently hardwired to PPQN \* 4.

32 Todo List

#### Global seq64::perfroll::set\_ppqn (int ppqn)

Resolve the issue of c\_perf\_scale\_x versus m\_perf\_scale\_x in perfroll.

#### Global seq64::perftime::set\_ppqn (int ppqn)

We need make the 4 constant variable per the number of beats (quarter-notes) per bar, and also at least make 16 (4x4) a meaningful manifest constant.

#### Global seq64::pulses to string (midipulse p)

Still needs to be unit tested.

#### Global seq64::pulses\_to\_timestring (midipulse p, const midi\_timing &timinginfo)

Still needs to be unit tested.

#### Global seq64::seqdata::on\_scroll\_event (GdkEventScroll \*ev)

DOCUMENT the sequata scrolling behavior in the documentation projects.

#### Global seq64::seqedit::get\_measures ()

Create a sequence::set units() function or a sequence::get measures() function to forward to.

# Global seq64::seqedit::seqedit (perform &perf, sequence &seq, int pos, int ppqn=SEQ64\_USE\_DEFAULT → PPQN)

Offload most of the work into an initialization function like options does.

#### Global seq64::seqedit::set\_beat\_width (int bw)

Check if verification is needed at this point.

#### Global seq64::seqedit::set beats per bar (int bpm)

Check if verification is needed at this point.

#### Global seq64::seqedit::set\_measures (int lim)

Check if verification is needed at this point.

#### Global seq64::segmenu::m modified

We need to make sure that the perform object is in control of the modification flag.

### Global seq64::seqmenu::seq\_copy ()

Can be offloaded to a perform member function that accepts a sequence clipboard non-const reference parameter.

#### Global seq64::segmenu::seg cut ()

A lot of seq\_cut() can be offloaded to a (new) perform member function that takes a sequence clipboard non-const reference parameter.

### Global seq64::seqmenu::seq\_paste ()

All of seq\_paste() can be offloaded to a (new) perform member function with a const clipboard reference parameter.

#### Global seq64::seqtime::update\_pixmap ()

Sizing needs to be controlled by font parameters. Instead of 19 or 20, estimate the width of 3 letters. Instead of 9 pixels down, use the height of the seqtime and the height of a character.

#### Global seq64::sequence::get\_minmax\_note\_events (int &lowest, int &highest)

For efficency, we should calculate this only when the event set changes, and save the results and return them if good.

#### Global seq64::sequence::stream event (event &ev)

When we feel like debugging, we will replace the global is-playing call with the parent perform's is-running call.

# Global seq64::triggers::next (midipulse \*tick\_on, midipulse \*tick\_off, bool \*selected, midipulse \*tick\_← offset)

It would be a bit simpler to simply return a trigger object, wouldn't it?

# **Deprecated List**

Global seq64::clock\_tick\_duration\_bogus (int bpm, int ppqn)

This is a somewhat bogus calculation used only for "statistical" output in the old perform module. Name changed to reflect this unfortunate fact. Use <a href="mailto:pulse\_length\_us()">pulse\_length\_us()</a> instead.

Global seq64::sequence::get\_name () const

34 Deprecated List

seq64::seqmenu       65         seq64::mainwid       32         seq64::perfnames       45         seq64::perform       46         seq64::performcallback       53         seq64::mainwnd       34         seq64::rc_settings       56         seq64::rect       58         seq64::gui_drawingarea_gtk2::rect       58         seq64::seq24SeqEventInput       58         seq64::sequence       69         seq64::rigger       76         seq64::user_instrument       78         seq64::user_instrument_t       78         seq64::user_midi_bus       78         seq64::user_settings       79         Window       59         seq64::gui_window_gtk2       24
seq64::seqmenu       655         seq64::mainwid       321         seq64::perfnames       450         seq64::perform       460         seq64::performcallback       533         seq64::mainwnd       34         seq64::rc_settings       560         seq64::rect       58         seq64::gui_drawingarea_gtk2::rect       58         seq64::Seq24SeqEventInput       58         seq64::sequence       69         seq64::rigger       76         seq64::user_instrument       78         seq64::user_instrument_t       78         seq64::user_midi_bus       78         seq64::user_midi_bus_t       79         seq64::user_settings       79         Window       seq64::gui_window_gtk2       24         seq64::eyentedit       16
seq64::seqmenu       65         seq64::mainwid       32         seq64::perfnames       45         seq64::perform       46         seq64::performcallback       53         seq64::mainwnd       34         seq64::rc_settings       56         seq64::rect       58         seq64::gui_drawingarea_gtk2::rect       58         seq64::Seq24SeqEventInput       58         seq64::sequence       69         seq64::trigger       76         seq64::user_instrument       78         seq64::user_instrument_t       78         seq64::user_midi_bus       78         seq64::user_midi_bus_t       78         seq64::user_settings       79         Window       seq64::user_settings       79         Window       seq64::user_window_gtk2       24         seq64::user_indid_indow_gtk2       24         seq64::user_window_gtk2       24

# **Data Structure Index**

# 11.1 Data Structures

Here are the data structures with brief descriptions:

seq64::AbstractPerfInput	
Provides an abstract base class to provide the minimal interface for the various "perf input"	
classes	103
seq64::automutex	
Provides a mutex that locks automatically when created, and unlocks when destroyed	106
seq64::click	
Encapsulates any possible mouse click	108
seq64::condition_var	
A mutex works best in conjunction with a condition variable	112
seq64::configfile	
This class is the abstract base class for optionsfile and userfile	114
seq64::editable_event	
Provides for the management of MIDI editable events	117
seq64::editable_events	
Provides for the management of an ordered collection MIDI editable events	130
seq64::event	
Provides events for management of MIDI events	138
seq64::event_list::event_key	
Provides a key value for an event map	156
seq64::event_list	
Receptable for MIDI events	158
seq64::eventedit	
This class supports an Event Editor that is used to tweak the details of events and get a better	
idea of the mix of events in a sequence	169
seq64::eventslots	40
This class implements the left-side list of events in the pattern event-edit window	184
seq64::font	
This class provides a wrapper for rendering fonts that are encoded as a 16 x 16 pixmap file in XPM format	201
XPM format	201
	200
Implements the performance input of that certain fruity sequencer that people seem to like	206
seq64::FruitySeqEventInput  This structure implements the interaction methods for the "fruity" mode of operation	210
rnis structure implements the interaction methods for the fruity mode of operation seq64::FruitySeqRollInput	210
	213
Implements the truity mouse interaction paradigm for the seqroll	410

40 Data Structure Index

seq64::gui_assistant	
This class provides an interface for some of the GUI support needed in Sequencer64	216
seq64::gui_assistant_gtk2  This class provides an interface for some of the Gtk/Gdk/Glib support needed in Sequencer64	218
seq64::gui_drawingarea_gtk2	
Implements the basic drawing areas of the application	220
Implements a stock palette of Gdk::Color elements	238
seq64::gui_window_gtk2	
This class supports a basic interface for Gtk::Window-derived objects seq64::jack_assistant	248
This class provides the performance mode JACK support	252
seq64::jack_scratchpad  Provide a temporary structure for passing data and results between a perform and jack_assistant	
object	272
seq64::jack_status_pair_t	
Provides an internal type to make it easier to display a specific and accurate human-readable message when a JACK operation fails	274
seq64::keybindentry	075
Class for management of application key-bindings	275
This class supports the performance mode	278
seq64::keys_perform_gtk2	
This class supports the performance mode	305
seq64::keys_perform_transfer  Provides a data-transfer structure to make it easier to fill in a keys_perform object's members using sscanf()	307
seq64::keystroke	307
Encapsulates any practical keystroke	310
seq64::lash This class supports LASII encretions if compiled with LASII support (i.e.	015
This class supports LASH operations, if compiled with LASH support (i.e seq64::lfownd	315
One LFO window class	318
seq64::maintime	
This class provides the drawing of the progress bar at the top of the main window, along with two "pills" that move in time with the beat and measure	322
seq64::mainwid	
This class implements the piano roll area of the application seq64::mainwnd	328
This class implements the functionality of the main window of the application, except for the	
Patterns Panel functionality, which is implemented in the mainwid class	341
seq64::mastermidibus  The class that "supervises" all of the midibus objects?	358
seq64::midi_container	000
• –	372
seq64::midi_control	
This class (formerly a struct) contains the control information for sequences that make up a live	
set	379
seq64::midi_list	000
·	383
seq64::midi_measures  Provides a data structure to hold the numeric equivalent of the measures string "measures↔	
:beats:divisions" ("m:b:d")	387
seq64::midi_splitter  This class handles the parsing and writing of MIDI files	389
rnis class handles the parsing and writing of MIDI files	309
We anticipate the need to have a small structure holding the parameters needed to calculate	
	393

11.1 Data Structures 41

seq64::midi_vector	
This class is the std::vector implementation of the midi_container	397
seq64::midibus Provides a class for handling the MIDI buss on Linux	400
seq64::midifile	
This class handles the parsing and writing of MIDI files	408
·	428
Simple wrapper for the pthread_mutex_t type used as a recursive mutex seq64::editable_event::name_value_t	420
Provides a type that contains the pair of values needed for the various lookup maps that are	
needed to manage editable events	429
This class supports a full tabbed options dialog	430
	700
seq64::optionsfile	405
	435
seq64::perfedit	
This class supports a Performance Editor that is used to arrange the patterns/sequences defined	
in the patterns panel	439
seq64::perfnames	
This class implements the left-side keyboard in the patterns window	456
	+50
seq64::perform	
This class supports the performance mode	464
seq64::performcallback	
Provides for notification of events	535
seq64::perfroll	
This class implements the performance roll user interface	536
seq64::perftime	
This class implements drawing the piano time at the top of the "performance window" (the "song	
editor")	555
seq64::rc_settings	
This class contains the options formerly named "global_xxxxxxx"	564
seq64::rect	
A small helper class representing a rectangle	581
seq64::gui_drawingarea_gtk2::rect	
A small helper structure representing a rectangle	582
	302
seq64::Seq24PerfInput	
Implements the default (Seq24) performance input characteristics of this application	583
seq64::Seq24SeqEventInput	
This structure implement the normal interaction methods for Seq24	586
seq64::seqdata	
	588
seq64::seqedit	
	EOC
,	599
seq64::seqevent	
Implements the piano event drawing area	629
seq64::seqkeys	
This class implements the left side piano of the pattern/sequence editor	643
seq64::seqmenu	
	653
- · · · · · · · · · · · · · · · · · · ·	000
seq64::seqroll	00
Implements the piano roll section of the pattern editor	664
seq64::seqtime	
This class implements the piano time, whatever that is	693
seq64::sequence	
Firstly a receptable for a single track of MIDI data read from a MIDI file or edited into a pattern	698
seq64::trigger	
	763
This sides from a single trigger for a sequence object	7 00

42 Data Structure Index

seq64::triggers	
Receptable the triggers that can be used with a sequence object	767
seq64::user_instrument	
Provides data about the MIDI instruments, readable from the "user" configuration file	783
seq64::user_instrument_t	
This structure corresponds to [user-instrument-N] definitions in the $\sim$ /.seq24usr	
or∼/.config/sequencer64/sequencer64.usr file	787
seq64::user_midi_bus	
Provides data about the MIDI busses, readable from the "user" configuration file	788
seq64::user_midi_bus_t	
This structure corresponds to [user-midi-bus-0] definitions in the $\sim$ /.seq24usr	
("user") file ( $\sim$ /.config/sequencer64/sequencer64.usr in the latest version of the	
application)	792
seq64::user_settings	
Holds the current values of sequence settings and settings that can modify the number of se-	
quences and the configuration of the user-interface	792
seq64::userfile	
Supports the user's $\sim$ /.config/sequencer64/sequencer64.usr and $\sim$ /.seq24us	sr
configuration file	822

# **Namespace Documentation**

## 12.1 Gtk Namespace Reference

# 12.2 seq64 Namespace Reference

Define this macro to use the new seq24 v.

### **Data Structures**

class AbstractPerfInput

Provides an abstract base class to provide the minimal interface for the various "perf input" classes.

· class automutex

Provides a mutex that locks automatically when created, and unlocks when destroyed.

· class click

Encapsulates any possible mouse click.

· class condition\_var

A mutex works best in conjunction with a condition variable.

· class configfile

This class is the abstract base class for optionsfile and userfile.

class editable\_event

Provides for the management of MIDI editable events.

class editable\_events

Provides for the management of an ordered collection MIDI editable events.

· class event

Provides events for management of MIDI events.

· class event\_list

The event\_list class is a receptable for MIDI events.

· class eventedit

This class supports an Event Editor that is used to tweak the details of events and get a better idea of the mix of events in a sequence.

· class eventslots

This class implements the left-side list of events in the pattern event-edit window.

class font

This class provides a wrapper for rendering fonts that are encoded as a 16 x 16 pixmap file in XPM format.

· class FruityPerfInput

Implements the performance input of that certain fruity sequencer that people seem to like.

struct FruitySeqEventInput

This structure implements the interaction methods for the "fruity" mode of operation.

class FruitySeqRollInput

Implements the fruity mouse interaction paradigm for the seqroll.

· class gui assistant

This class provides an interface for some of the GUI support needed in Sequencer64.

class gui\_assistant\_gtk2

This class provides an interface for some of the Gtk/Gdk/Glib support needed in Sequencer64.

• class gui\_drawingarea\_gtk2

Implements the basic drawing areas of the application.

· class gui\_palette\_gtk2

Implements a stock palette of Gdk::Color elements.

· class gui\_window\_gtk2

This class supports a basic interface for Gtk::Window-derived objects.

class jack\_assistant

This class provides the performance mode JACK support.

class jack\_scratchpad

Provide a temporary structure for passing data and results between a perform and jack\_assistant object.

· struct jack status pair t

Provides an internal type to make it easier to display a specific and accurate human-readable message when a JACK operation fails.

class keybindentry

Class for management of application key-bindings.

class keys\_perform

This class supports the performance mode.

class keys\_perform\_gtk2

This class supports the performance mode.

struct keys\_perform\_transfer

Provides a data-transfer structure to make it easier to fill in a keys perform object's members using sscanf().

· class keystroke

Encapsulates any practical keystroke.

class lash

This class supports LASH operations, if compiled with LASH support (i.e.

· class Ifownd

One LFO window class.

class maintime

This class provides the drawing of the progress bar at the top of the main window, along with two "pills" that move in time with the beat and measure.

· class mainwid

This class implements the piano roll area of the application.

· class mainwnd

This class implements the functionality of the main window of the application, except for the Patterns Panel functionality, which is implemented in the mainwid class.

· class mastermidibus

The class that "supervises" all of the midibus objects?

class midi\_container

This class is the abstract base class for a container of MIDI track information.

· class midi control

This class (formerly a struct) contains the control information for sequences that make up a live set.

· class midi\_list

This class is the std::list implementation of the midi\_container.

· class midi measures

Provides a data structure to hold the numeric equivalent of the measures string "measures:beats:divisions" ("m:b:d").

class midi\_splitter

This class handles the parsing and writing of MIDI files.

· class midi\_timing

We anticipate the need to have a small structure holding the parameters needed to calculate MIDI times within an arbitrary song.

· class midi\_vector

This class is the std::vector implementation of the midi\_container.

· class midibus

Provides a class for handling the MIDI buss on Linux.

· class midifile

This class handles the parsing and writing of MIDI files.

· class mutex

The mutex class provides a simple wrapper for the pthread\_mutex\_t type used as a recursive mutex.

· class options

This class supports a full tabbed options dialog.

· class optionsfile

Provides a file for reading and writing the application' main configuration file.

· class perfedit

This class supports a Performance Editor that is used to arrange the patterns/sequences defined in the patterns panel.

class perfnames

This class implements the left-side keyboard in the patterns window.

· class perform

This class supports the performance mode.

· struct performcallback

Provides for notification of events.

· class perfroll

This class implements the performance roll user interface.

· class perftime

This class implements drawing the piano time at the top of the "performance window" (the "song editor").

class rc\_settings

This class contains the options formerly named "global\_xxxxxx".

· class rect

A small helper class representing a rectangle.

class Seq24PerfInput

 ${\it Implements the default (Seq 24) performance input characteristics of this application.}$ 

struct Seq24SeqEventInput

This structure implement the normal interaction methods for Seq24.

· class seqdata

This class supports drawing piano-roll eventis on a window.

· class segedit

Implements the Pattern Editor, which has references to:

· class seqevent

Implements the piano event drawing area.

· class segkeys

This class implements the left side piano of the pattern/sequence editor.

class segmenu

This class handles the right-click menu of the sequence slots in the pattern window.

class segroll

Implements the piano roll section of the pattern editor.

· class segtime

This class implements the piano time, whatever that is.

· class sequence

The sequence class is firstly a receptable for a single track of MIDI data read from a MIDI file or edited into a pattern.

· class trigger

This class hold a single trigger for a sequence object.

· class triggers

The triggers class is a receptable the triggers that can be used with a sequence object.

· class user instrument

Provides data about the MIDI instruments, readable from the "user" configuration file.

struct user\_instrument\_t

This structure corresponds to [user-instrument-N] definitions in the  $\sim$  /.seq24usr or  $\sim$  /.config/sequencer64/sequencer file.

· class user midi bus

Provides data about the MIDI busses, readable from the "user" configuration file.

· struct user midi bus t

This structure corresponds to [user-midi-bus-0] definitions in the  $\sim$ /.seq24usr ("user") file ( $\sim$ /.config/sequencer64/sequencer64.usr in the latest version of the application).

· class user settings

Holds the current values of sequence settings and settings that can modify the number of sequences and the configuration of the user-interface.

· class userfile

Supports the user's  $\sim$  /.config/sequencer64/sequencer64.usr and  $\sim$  /.seq24usr configuration file.

#### **Typedefs**

· typedef unsigned char midibyte

Provides a fairly common type definition for a byte value.

· typedef unsigned char bussbyte

Distinguishes a buss/bus number from other MIDI bytes.

· typedef unsigned short midishort

Distinguishes a short value from the unsigned short values implicit in short-valued MIDI numbers.

typedef unsigned long midilong

Distinguishes a long value from the unsigned long values implicit in long-valued MIDI numbers.

· typedef long midipulse

Distinguishes a long value from the unsigned long values implicit in MIDI time measurements.

#### **Enumerations**

```
    enum wave_type_t {
        WAVE_NONE,
        WAVE_SINE,
        WAVE_SAWTOOTH,
        WAVE_REVERSE_SAWTOOTH,
        WAVE_TRIANGLE }
```

Provides a clear enumation of wave types supported by the wave function.

```
enum seq_modifier_t {
 SEQ64 NO MASK,
 SEQ64_SHIFT_MASK,
 SEQ64_LOCK_MASK,
 SEQ64_CONTROL_MASK,
 SEQ64 MOD1 MASK,
 SEQ64 MOD2 MASK,
 SEQ64 MOD3 MASK,
 SEQ64 MOD4 MASK,
 SEQ64_MOD5 MASK,
 SEQ64_BUTTON1_MASK,
 SEQ64_BUTTON2_MASK,
 SEQ64_BUTTON3_MASK,
 SEQ64 BUTTON4 MASK,
 SEQ64_BUTTON5_MASK,
 SEQ64_SUPER_MASK,
 SEQ64 HYPER MASK,
 SEQ64 META MASK,
 SEQ64_RELEASE_MASK,
 SEQ64_MASK_MAX }
     Types of modifiers, essentially copied from gtk-2.0/gdk/gdktypes.h.
• enum seq_event_type_t {
 SEQ64_NOTHING,
 SEQ64 DELETE,
 SEQ64 DESTROY.
 SEQ64_EXPOSE,
 SEQ64 MOTION NOTIFY,
 SEQ64 BUTTON PRESS,
 SEQ64_2BUTTON_PRESS,
 SEQ64_3BUTTON_PRESS,
 SEQ64 BUTTON RELEASE,
 SEQ64_KEY_PRESS,
 SEQ64_KEY_RELEASE,
 SEQ64 SCROLL,
 SEQ64 EVENT LAST }
    Event types copped from gtk-2.0/gdk/gdkevents.h for use with this application.

    enum seg scroll direction t {

 SEQ64_SCROLL_UP,
 SEQ64_SCROLL_DOWN,
 SEQ64_SCROLL_LEFT,
 SEQ64 SCROLL RIGHT }
     Types of scroll events, essentially copied from gtk-2.0/gdk/gdkevents.h.
• enum clock e {
 e_clock_off,
 e_clock_pos,
 e_clock_mod }
    A clock enumeration, as used in the File / Options / MIDI Clock dialog.

    enum interaction method t {

 e_seq24_interaction,
 e_fruity_interaction,
 e_number_of_interactions }
    Provides codes for the mouse-handling used by the application.
enum c_music_scales {
 c scale off,
 c scale major,
 c_scale_minor,
 c_scale_harmonic_minor,
```

```
c_scale_melodic_minor,
  c scale c whole tone,
  c_scale_blues,
  c_scale_major_pentatonic,
  c_scale_minor_pentatonic,
  c scale size }
     Corresponds to the small number of musical scales that the application can handle.
enum draw_type_t {
  DRAW FIN,
  DRAW_NORMAL_LINKED,
  DRAW_NOTE_ON,
  DRAW NOTE OFF }
     Provides a set of methods for drawing certain items.
• enum mouse action e {
  e_action_select,
  e_action_draw,
  e_action_grow }
     Mouse actions, for the Pattern Editor.
enum edit action t {
  c select all notes,
  c select all events,
  c_select_inverse_notes,
  c_select_inverse_events,
  c quantize notes,
  c_quantize_events,
  c_tighten_events,
  c tighten notes,
  c transpose notes,
  c reserved,
  c_transpose_h,
  c_expand_pattern,
  c compress pattern,
  c_select_even_notes,
  c_select_odd_notes,
  c_swing_notes }
     Actions.
```

#### **Functions**

std::string wave\_type\_name (wave\_type\_t wavetype)

Converts a wave type value to a string.

Extracts up to 4 numbers from a colon-delimited string.

std::string pulses\_to\_string (midipulse p)

Converts MIDI pulses (also known as ticks, clocks, or divisions) into a string.

• std::string pulses\_to\_measurestring (midipulse p, const midi\_timing &seqparms)

Converts a MIDI pulse/ticks/clock value into a string that represents "measures:beats:ticks" ("measures:beats⇔:division").

bool pulses\_to\_midi\_measures (midipulse p, const midi\_timing &seqparms, midi\_measures &measures)

Converts a MIDI pulse/ticks/clock value into a string that represents "measures:beats:ticks" ("measures:beats⇔:division").

• std::string pulses\_to\_timestring (midipulse p, int bpm, int ppqn)

Converts a MIDI pulse/ticks/clock value into a string that represents "hours:minutes:seconds.fraction".

• std::string pulses\_to\_timestring (midipulse p, const midi\_timing &timinginfo)

Converts a MIDI pulse/ticks/clock value into a string that represents "hours:minutes:seconds.fraction".

midipulse measurestring to pulses (const std::string &measures, const midi timing &segparms)

Converts a string that represents "measures:beats:division" to a MIDI pulse/ticks/clock value.

midipulse midi\_measures\_to\_pulses (const midi\_measures &measures, const midi\_timing &seqparms)

Converts a string that represents "measures:beats:division" to a MIDI pulse/ticks/clock value.

midipulse timestring to pulses (const std::string &timestring, int bpm, int ppqn)

Converts a string that represents "hours:minutes:seconds.fraction" into a MIDI pulse/ticks/clock value.

midipulse string\_to\_pulses (const std::string &s, const midi\_timing &mt)

Converts a time string to pulses.

midibyte string to midibyte (const std::string &s)

Converts a string to a MIDI byte.

std::string shorten\_file\_spec (const std::string &fpath, int leng)

Shortens a file-specification to make sure it is no longer than the provided length value.

bool string not void (const std::string &s)

Tests that a string is not empty and has non-space characters.

• bool string\_is\_void (const std::string &s)

Tests that a string is empty or has only white-space characters.

bool strings match (const std::string &target, const std::string &x)

Compares two strings for a form of semantic equality, for the purposes of editable\_event(), for example.

• int log2\_time\_sig\_value (int tsd)

Calculates the log-base-2 value of a number that is already a power of 2.

void tempo us to bytes (midibyte t[3], int tempo us)

Provide a way to convert a tempo value (microseconds per quarter note) into the three bytes needed as value in a Tempo meta event.

int zoom\_power\_of\_2 (int ppqn)

Calculates a suitable starting zoom value for the given PPQN value.

double beats\_per\_minute\_from\_tempo\_us (double tempous)

This function calculates the effective beats-per-minute based on the value of a Tempo meta-event.

double tempo\_us\_from\_beats\_per\_minute (double bpm)

This function is the inverse of beats\_per\_minute\_from\_tempo().

long tempo\_to\_us (int bpm)

Converts tempo (e.g.

• double pulse\_length\_us (int bpm, int ppqn)

Calculates pulse-length from the BPM (beats-per-minute) and PPQN (pulses-per-quarter-note) values.

double delta\_time\_us\_to\_ticks (unsigned long us, int bpm, int ppqn)

Converts delta time in microseconds to ticks.

• double ticks to delta time us (midipulse delta ticks, int bpm, int ppqn)

Converts the time in ticks ("clocks") to delta time in microseconds.

double clock\_tick\_duration\_bogus (int bpm, int ppqn)

Calculates the duration of a clock tick based on PPQN and BPM settings.

int clock\_ticks\_from\_ppqn (int ppqn)

A simple calculation to convert PPQN to MIDI clock ticks.

• double double\_ticks\_from\_ppqn (int ppqn)

A simple calculation to convert PPQN to MIDI clock ticks.

midipulse pulses\_per\_measure (int ppqn=SEQ64\_DEFAULT\_PPQN)

Calculates the pulses per measure.

• midipulse measures to ticks (int bpm, int ppqn, int bw, int measures=1)

Calculates the length of an integral number of measures, in ticks.

double wave func (double angle, wave type t wavetype)

Calculates a wave function for use as an LFO (low-frequency oscillator) for modifying data values in a sequence.

bool help\_check (int argc, char \*argv [])

Checks to see if the first option is a help or version argument, just so we can skip the "Reading configuration ..." messages.

• bool parse\_options\_files (perform &p, int argc, char \*argv [])

Provides the command-line option support, as well as some setup support, extracted from the main routine of Sequencer64.

int parse\_command\_line\_options (perform &p, int argc, char \*argv [])

Parses the command-line options on behalf of the application.

bool write options files (const perform &p)

Saves all options to the "rc" and "user" configuration files.

std::string build details ()

Generates a string describing the features of the build.

• std::string to string (const event &ev)

A free function to convert an event into an informative string, just enough to save some debugging time.

- bool file\_access (const std::string &targetfile, int mode)
- bool file\_exists (const std::string &filename)

Checks a file for existence.

bool file readable (const std::string &filename)

Checks a file for readability.

• bool file\_writable (const std::string &filename)

Checks a file for writability.

bool file accessible (const std::string &filename)

Checks a file for readability and writability.

bool file\_executable (const std::string &filename)

Checks a file for the ability to be executed.

bool file\_is\_directory (const std::string &filename)

Checks a file to see if it is a directory.

bool make\_directory (const std::string &pathname)

A function to ensure that the  $\sim$ /.config/sequencer64 directory exists.

• bool ppqn\_is\_valid (int ppqn)

Common code for handling PPQN settings.

int jack\_sync\_callback (jack\_transport\_state\_t state, jack\_position\_t \*pos, void \*arg)

Global functions for JACK support and JACK sessions.

void jack\_shutdown\_callback (void \*arg)

This callback is to shut down JACK by clearing the jack\_assistant :: m\_jack\_running flag.

void jack\_timebase\_callback (jack\_transport\_state\_t state, jack\_nframes\_t nframes, jack\_position\_t \*pos, int new pos, void \*arg)

The JACK timebase function defined here sets the JACK position structure.

- int jack\_process\_callback (jack\_nframes\_t nframes, void \*arg)
- long get\_current\_jack\_position (void \*arg)
- void jack session callback (jack session event t \*ev, void \*arg)

Set the m\_jsession\_ev (event) value of the perform object.

- bool invalid\_key (unsigned int key)
- std::string keyval\_name (unsigned int key)

Obtains the name of the key.

void keyval\_normalize (keys\_perform\_transfer &k)

For the case in which the "rc" file is missing or corrupt, this function makes sure that each control key has a reasonable value.

bool create\_lash\_driver (perform &p, int argc, char \*\*argv)

Creates and starts a lash object.

lash \* lash\_driver ()

Provides access to the lash object.

• void delete\_lash\_driver ()

Deletes the last object.

• bool is null midipulse (midipulse p)

Compares a midipulse value to SEQ64\_NULL\_MIDIPULSE.

void \* output\_thread\_func (void \*p)

Global functions defined in perform.cpp.

void \* input thread func (void \*myperf)

Set up the performance, and set the process to realtime privileges.

• rc\_settings & rc ()

Returns a reference to the global rc\_settings object.

• user settings & usr ()

Returns a reference to the global user\_settings object, for better encapsulation.

int choose ppqn (int ppqn)

Common code for handling PPQN settings.

• long min (long a, long b)

min() for long values.

static std::string make\_section\_name (const std::string &label, int value)

Provides a purely internal, ad hoc helper function to create numbered section names for the userfile class.

font & font render ()

The p\_font\_renderer pointer was once created in the main module, sequencer64.cpp.

• Gtk::Adjustment & adjustment\_dummy ()

Provides a way to provide a dummy Gtk::Adjustment object, but not create one until it is actually needed, so that the Glib/Gtk infrastructure is ready for it.

void update\_mainwid\_sequences ()

This global function in the seq64 namespace calls mainwid :: update\_sequences\_on\_window(), if the global mainwid object exists.

void update\_perfedit\_sequences ()

This global function in the seq64 namespace calls perfedit :: draw\_sequences(), if the global perfedit objects exist.

int FF\_RW\_timeout (void \*arg)

This global function in the seq64 namespace is passed to the gtk\_timeout\_add callback.

• static long clamp (long val, long low, long hi)

An internal function used by the FruitySeqRollInput class.

static long clamp (long val, long low, long hi)

An internal function used by the FruitySeqRollInput class.

#### **Variables**

• std::string c\_controller\_names [SEQ64\_MIDI\_COUNT\_MAX]

Provides the default names of MIDI controllers.

· const midibyte EVENT STATUS BIT

This highest bit of the status byte is always 1.

const midibyte EVENT\_ANY

Channel Voice Messages.

- · const midibyte EVENT NOTE OFF
- const midibyte EVENT NOTE ON
- const midibyte EVENT\_AFTERTOUCH
- const midibyte EVENT\_CONTROL\_CHANGE
- const midibyte EVENT\_PROGRAM\_CHANGE
- const midibyte EVENT\_CHANNEL\_PRESSURE
- const midibyte EVENT\_PITCH\_WHEEL
   const midibyte EVENT\_MIDL\_EVERY
- const midibyte EVENT\_MIDI\_SYSEX

#### System Messages.

- const midibyte EVENT\_MIDI\_QUARTER\_FRAME
- · const midibyte EVENT MIDI SONG POS
- const midibyte EVENT MIDI SONG SELECT
- · const midibyte EVENT MIDI SONG F4
- · const midibyte EVENT MIDI SONG F5
- const midibyte EVENT\_MIDI\_TUNE\_SELECT
- · const midibyte EVENT MIDI SYSEX END
- const midibyte EVENT MIDI SYSEX CONTINUE
- const midibyte EVENT MIDI CLOCK
- const midibyte EVENT\_MIDI\_SONG\_F9
- const midibyte EVENT\_MIDI\_START
- const midibyte EVENT MIDI CONTINUE
- const midibyte EVENT\_MIDI\_STOP
- · const midibyte EVENT MIDI SONG FD
- const midibyte EVENT MIDI ACTIVE SENS
- · const midibyte EVENT MIDI RESET
- · const midibyte EVENT MIDI META

0xFF is a MIDI "escape code" used in MIDI files to introduce a MIDI meta event.

const midibyte EVENT NULL CHANNEL

This value of 0xFF is Sequencer64's channel value that indicates that the event's m\_channel value is bogus.

const midibyte EVENT\_GET\_CHAN\_MASK

These file masks are used to obtain or to mask off the channel data from a status byte.

- const midibyte EVENT\_CLEAR\_CHAN\_MASK
- · const int EVENTS ALL

Variable from the "stazed" extras.

- const int EVENTS UNSELECTED
- · const int c midibus output size

Manifest global constants.

• const int c\_midibus\_input\_size

The c\_midibus\_input\_size value is passed, in mastermidibus, to snd\_seq\_set\_input\_buffer\_size().

· const int c\_midibus\_sysex\_chunk

Controls the amount a SysEx data sent at one time, in the midibus module.

const midilong c\_midibus

Provides tags used by the midifile class to control the reading and writing of the extra "proprietary" information stored in a Seq24 MIDI file.

· const midilong c midich

Track channel number.

· const midilong c\_midiclocks

Track clocking.

· const midilong c triggers

See c\_triggers\_new.

const midilong c\_notes

Song data.

· const midilong c\_timesig

Track time signature.

const midilong c\_bpmtag

Song beats/minute.

const midilong c\_triggers\_new

Track trigger data.

· const midilong c\_mutegroups

Song mute group data.

const midilong c\_midictrl

Song MIDI control.

const midilong c\_musickey

The track's key.

· const midilong c\_musicscale

The track's scale.

· const midilong c\_backsequence

Track background sequence.

const midilong c\_transpose

Track transpose value.

· const midilong c perf bp mes

Perfedit beats/measure.

const midilong c\_perf\_bw

Perfedit beat-width.

const int c\_midi\_track\_ctrl

Pseudo control values for associating MIDI events (I think) with automation of some of the controls in seq24.

- · const int c\_midi\_control\_bpm\_up
- const int c\_midi\_control\_bpm\_dn
- const int c\_midi\_control\_ss\_up
- · const int c midi control ss dn
- · const int c\_midi\_control\_mod\_replace
- · const int c midi control mod snapshot
- · const int c\_midi\_control\_mod\_queue
- · const int c\_midi\_control\_mod\_gmute
- const int c\_midi\_control\_mod\_glearn
- const int c\_midi\_control\_play\_ss
- const int c\_midi\_controls
- const bool c\_scales\_policy [c\_scale\_size][SEQ64\_OCTAVE\_SIZE]

Each value in the kind of scale is denoted by a true value in these arrays.

• const int c\_scales\_transpose\_up [c\_scale\_size][SEQ64\_OCTAVE\_SIZE]

Increment values needed to transpose each scale up so that it remains in the same key.

const int c\_scales\_transpose\_dn [c\_scale\_size][SEQ64\_OCTAVE\_SIZE]

Making these positive makes it easier to read, but the actual array contains negative values.

• const char c\_scales\_text [c\_scale\_size][20]

The names of the currently-supported scales.

const char c\_key\_text [SEQ64\_OCTAVE\_SIZE][4]

Provides the entries for the Key dropdown menu in the Pattern Editor window.

• const char c\_interval\_text [16][4]

Provides the entries for the Interval dropdown menu in the Pattern Editor window.

const char c\_chord\_text [8][6]

Provides the entries for the Chord dropdown menu in the Pattern Editor window.

· const int c chord number

Additional support data for the chord-generation feature from Stazed's seq32 project.

const char c\_chord\_table\_text [c\_chord\_number][12]

Additional support data for the chord-generation feature from Stazed's seg32 project.

const int c\_chord\_size

Provides the number of chord values in each chord's specification array.

const int c\_chord\_table [c\_chord\_number][c\_chord\_size]

Additional support data for the chord-generation feature from Stazed's seq32 project.

const int c\_max\_instruments

Provides the maximum number of instruments that can be defined in the  $\sim$ /.seq24usr or  $\sim$ /.config/sequencer64/sequencer6 file.

const int c\_max\_busses

Provides the maximum number of MIDI buss definitions supported in the "user" file.

static const std::string versiontext

Sets up the "hardwired" version text for Sequencer64.

static struct option long\_options []

A structure for command parsing that provides the long forms of command-line arguments, and associates them with their respective short form.

static const std::string s\_arg\_list

Provides a complete list of the short options, and is passed to getopt\_long().

static const char \*const s\_help\_1a

Provides help text.

static const char \*const s\_help\_1b

More help text.

• static const char \*const s\_help\_2

Still more help text.

static const char \*const s\_help\_3

Still more help text.

static const char \*const s\_help\_4

Still more help text.

static const std::string s\_build\_highlight\_empty

This section of variables provide static information about the options enabled or disabled during the build.

- · static const std::string s build lash support
- static const std::string s build jack support
- static const std::string s\_build\_jack\_session
- static const std::string s event editor
- static const std::string s\_build\_pause\_support
- static const std::string s\_build\_use\_event\_map
- static const std::string s\_build\_presort\_events
- static const std::string s\_build\_chord\_generator
- static const std::string s\_build\_edit\_highlight
- static const std::string s\_build\_timesig\_tempo
- · static const std::string s build midi vector
- static const std::string s\_build\_solid\_grid
- static const std::string s\_build\_follow\_progress
- static const std::string s\_statistics\_support
- static const std::string s\_strip\_empty\_mutes
- static const std::string s\_seq32\_jack\_support
- static const std::string s\_seq32\_transport
- static const std::string s seg32 transpose
- static const std::string s\_seq32\_menu\_buttons
- static const std::string s\_seq32\_lfo\_support
- struct charpair\_t s\_character\_mapping []

The array of mappings of the non-alphabetic characters.

static lash \* s\_global\_lash\_driver

The global pointer to the LASH driver instance.

· static const int c status replace

Purely internal constants used with the functions that implement MIDI control for the application.

static const int c\_status\_snapshot

This value signals the "snapshot" functionality.

• static const int c\_status\_queue

This value signals the "queue" functionality.

• static rc\_settings g\_rc\_settings

Provides the replacement for all of the other "global\_xxx" variables.

static user\_settings g\_user\_settings

Provides the replacement for all of the other settings in the "user" configuration file, plus some of the "constants" in the globals module.

· static const long s handlesize

An internal variable for handle size.

· static const int s\_jitter\_amount

An internal variable for user-jitter control.

static mainwid \* gs mainwid pointer

Holds a pointer to the single instance of mainwnd for the entire application, once it is created.

· const int c mainwid x

The width of the main pattern/sequence grid, in pixels.

- · const int c mainwid y
- static perfedit \* gs\_perfedit\_pointer\_0

Holds a pointer to the first instance of perfedit for the entire application, once it is created.

static perfedit \* gs perfedit pointer 1

Holds a pointer to the second instance of perfedit for the entire application, once it is created.

static const long s\_handlesize

An internal variable for handle size.

## 12.2.1 Detailed Description

Do not document a namespace; it breaks Doxygen.

Obsolete Now a permanent option.

0.9.3 delta-tick calculation code. This code doesn't quite work for generating the proper rate of MIDI clocks, and so have disabled that code until we can figure out what it is we're doing wrong. Do not enable it unless you are willing to test it.

Provides a new option to save the Time Signature and Tempo data that may be present in a MIDI file (in the first track) in the sequence object, and write them back to the MIDI file when saved again, in Sequencer64 format. The SeqSpec events that Seq24 and Sequencer64 save for these "events" are not readable by other MIDI applications, such as QTractor. By enabling this macro, other sequencers can read the correct time-signature and tempo values.

#define SEQ64\_HANDLE\_TIMESIG\_AND\_TEMPO

### 12.2.2 Typedef Documentation

### 12.2.2.1 midibyte

typedef unsigned char seq64::midibyte

This can be used for a MIDI buss/port number or for a MIDI channel number. See the SEQ64\_INVALID\_MIDIBYTE macro.

#### 12.2.2.2 bussbyte

typedef unsigned char seq64::bussbyte

#### 12.2.2.3 midishort

typedef unsigned short seq64::midishort

### 12.2.2.4 midilong

typedef unsigned long seq64::midilong

#### 12.2.2.5 midipulse

typedef long seq64::midipulse

HOWEVER, CURRENTLY, if you make this value unsigned, then perfroll won't show any notes in the sequence bars!!! Also, a number of manipulations of this type currently depend upon it being a signed value.

## 12.2.3 Enumeration Type Documentation

12.2.3.1 wave\_type\_t

enum seq64::wave\_type\_t

We still have to clarify these type values, though.

### **Enumerator**

WAVE_NONE	No waveform, never used.
WAVE_SINE	Sine wave modulation.
WAVE_SAWTOOTH	Saw-tooth (ramp) modulation.
WAVE_REVERSE_SAWTOOTH	Reverse saw-tooth (decay).
WAVE_TRIANGLE	No waveform, never used.

### 12.2.3.2 seq\_modifier\_t

enum seq64::seq\_modifier\_t

We have to tweak the names to avoid redeclaration errors and to "personalize" the values. We change "GDK" to "SEQ64".

Since we're getting events from, say Gtk-2.4, but using our (matching) values for comparison, use the CAST\_EQ UIVALENT() macro to compare them. Note that we might still end up having to a remapping (e.g. if trying to get the code to work with the Qt framework).

#### **Enumerator**

SEQ64_NO_MASK	
SEQ64_SHIFT_MASK	
SEQ64_LOCK_MASK	

## Enumerator

SEQ64_CONTROL_MASK	
SEQ64_MOD1_MASK	
SEQ64_MOD2_MASK	
SEQ64_MOD3_MASK	
SEQ64_MOD4_MASK	
SEQ64_MOD5_MASK	
SEQ64_BUTTON1_MASK	
SEQ64_BUTTON2_MASK	
SEQ64_BUTTON3_MASK	
SEQ64_BUTTON4_MASK	
SEQ64_BUTTON5_MASK	
SEQ64_SUPER_MASK	Bits 13 and 14 are used by XKB, bits 15 to 25 are unused. Bit 29 is used internally.
SEQ64_HYPER_MASK	
SEQ64_META_MASK	
SEQ64_RELEASE_MASK	
SEQ64_MASK_MAX	

## 12.2.3.3 seq\_event\_type\_t

# enum seq64::seq\_event\_type\_t

Only the values we need have been grabbed. We have to tweak the names to avoid redeclaration errors and to "personalize" the values. We change "GDK" to "SEQ64", but, for convenience (to hide errors? :-D), we keep the number the same.

Since we're getting events from, say Gtk-2.4, but using our (matching) values for comparison, use the CAST\_EQ UIVALENT() macro to compare them. Note that we might still end up having to a remapping (e.g. if trying to get the code to work with the Qt framework).

### Enumerator

SEQ64_NOTHING	
SEQ64_DELETE	
SEQ64_DESTROY	
SEQ64_EXPOSE	
SEQ64_MOTION_NOTIFY	
SEQ64_BUTTON_PRESS	
SEQ64_2BUTTON_PRESS	
SEQ64_3BUTTON_PRESS	
SEQ64_BUTTON_RELEASE	
SEQ64_KEY_PRESS	
SEQ64_KEY_RELEASE	
SEQ64_SCROLL	
SEQ64_EVENT_LAST	

12.2.3.4 seq\_scroll\_direction\_t

enum seq64::seq\_scroll\_direction\_t

We have to tweak the names to avoid redeclaration errors and to "personalize" the values. We change "SEQ64" to "SEQ64".

Since we're getting events from, say Gtk-2.4, but using our (matching) values for comparison, use the CAST\_EQ UIVALENT() macro to compare them. Note that we might still end up having to a remapping (e.g. if trying to get the code to work with the Qt framework).

## Enumerator

SEQ64_SCROLL_UP	
SEQ64_SCROLL_DOWN	
SEQ64_SCROLL_LEFT	
SEQ64_SCROLL_RIGHT	

12.2.3.5 clock\_e

enum seq64::clock\_e

This enumeration was also defined in midibus\_portmidi.h, but we put it into this common module to avoid duplication.

## Enumerator

e_clock_off	Corresponds to the "Off" selection in the MIDI Clock tab. With this setting, the MIDI Clock is disabled for the buss using this setting. Notes will still be sent that buss, of course. Some software synthesizer might require this setting in order to make a sound.
e_clock_pos	Corresponds to the "Pos" selection in the MIDI Clock tab. With this setting, MIDI Clock will be sent to this buss, and, if playback is starting beyond tick 0, then MIDI Song Position and MIDI Continue will also be sent on this buss.
e_clock_mod	Corresponds to the "Mod" selection in the MIDI Clock tab. With this setting, MIDI Clock and MIDI Start will be sent. But clocking won't begin until the Song Position has reached the start modulo (in 1/16th notes) that is specified.

12.2.3.6 interaction\_method\_t

enum seq64::interaction\_method\_t

Moved here from the globals.h module.

# Enumerator

e_seq24_interaction	Use the normal mouse interactions.
e_fruity_interaction	The "fruity" mouse interactions.
e_number_of_interactions	Keep this last a size value.

12.2.3.7 c\_music\_scales

```
enum seq64::c_music_scales
```

Scales can be shown in the piano roll as gray bars for reference purposes.

We've added three more scales; there are still a number of them that could be fruitfully added to the list of scales.

It would be good to offload this stuff into a new "scale" class.

## Enumerator

c_scale_off	
c_scale_major	
c_scale_minor	
c_scale_harmonic_minor	
c_scale_melodic_minor	
c_scale_c_whole_tone	
c_scale_blues	
c_scale_major_pentatonic	
c_scale_minor_pentatonic	
c_scale_size	

12.2.3.8 draw\_type\_t

```
enum seq64::draw_type_t
```

These values are used in the sequence, seqroll, perfroll, and mainwid classes.

## Enumerator

DRAW_FIN	Indicates that drawing is finished.
DRAW_NORMAL_LINKED	Used for drawing linked notes.
DRAW_NOTE_ON	For starting the drawing of a note.
DRAW_NOTE_OFF	For finishing the drawing of a note.

12.2.3.9 mouse\_action\_e

enum seq64::mouse\_action\_e

## Enumerator

e_action_select	
e_action_draw	
e_action_grow	

## 12.2.3.10 edit\_action\_t

```
enum seq64::edit_action_t
```

These variables represent actions that can be applied to a selection of notes. One idea would be to add a swing-quantize action. We will reserve the value here, for notes only; not yet used or part of the action menu.

## Enumerator

c_select_all_notes	
c_select_all_events	
c_select_inverse_notes	
c_select_inverse_events	
c_quantize_notes	
c_quantize_events	
c_tighten_events	
c_tighten_notes	
c_transpose_notes	
c_reserved	
c_transpose_h	
c_expand_pattern	
c_compress_pattern	
c_select_even_notes	
c_select_odd_notes	
c_swing_notes	

## 12.2.4 Function Documentation

## 12.2.4.1 wave\_type\_name()

These names are short because I cannot figure out how to get the window pad out to show the longer names.

# **Parameters**

wavetype	The wave-type value to be displayed.

## Returns

Returns a short description of the wave type.

## 12.2.4.2 extract\_timing\_numbers()

```
std::string & part_1,
std::string & part_2,
std::string & part_3,
std::string & fraction )
```

· measures : beats : divisions

- "213:4:920"

- "0:1:0"

· hours : minutes : seconds . fraction

- "2:04:12.14"

- "0:1:2"

## Warning

This is not the most efficient implementation you'll ever see. At some point we will tighten it up. This function is tested in the seq64-tests project, in the "calculations\_unit\_test" module.

## **Parameters**

	s	Provides the input time string, in measures or time format, to be processed.
out	part⇔	The destination reference for the first part of the time.
	_1	
out	part⇔	The destination reference for the second part of the time.
	_2	
out	part⇔	The destination reference for the third part of the time.
	_3	
out	fraction	The destination reference for the fractional part of the time.

# Returns

Returns true if a reasonable portion (3 numbers) was good for extraction. The fraction part will start with a period for easier conversion to fractional seconds.

## 12.2.4.3 pulses\_to\_string()

Todo Still needs to be unit tested.

## **Parameters**

p | The MIDI pulse/tick value to be converted.

Returns the string as an unsigned ASCII integer number.

## 12.2.4.4 pulses\_to\_measurestring()

#### **Parameters**

p	The number of MIDI pulses (clocks, divisions, ticks, you name it) to be converted. If the value is
	SEQ64_NULL_MIDIPULSE, it is converted to 0, because callers don't generally worry about such
	niceties, and the least we can do is convert illegal measure-strings (like "000:0:000") to a legal
	value.
seqparms	This small structure provides the beats/measure, beat-width, and PPQN that hold for the
	sequence involved in this calculation. These values are needed in the calculations.

## Returns

Returns the string, in measures notation, for the absolute pulses that mark this duration.

# 12.2.4.5 pulses\_to\_midi\_measures()

## **Parameters**

	р	Provides the MIDI pulses (as in "pulses per quarter note") that are to be converted to MIDI measures format.
	seqparms	This small structure provides the beats/measure (B), beat-width (W), and PPQN (P) that hold for the sequence involved in this calculation. The beats/minute (T for tempo) value is not needed.
out	measures	Provides the current MIDI song time structure to hold the results, which are the measures, beats, and divisions values for the time of interest. Note that the measures and beats are corrected to be re 1, not 0.

## Returns

Returns true if the calculations were able to be made. The P, B, and W values all need to be greater than 0.

## **12.2.4.6** pulses\_to\_timestring() [1/2]

If the fraction part is 0, then it is not shown. Examples:

```
- "0:0:0"

- "0:0:0.102333"

- "12:3:1"

- "12:3:1.000001"
```

#### **Parameters**

р	Provides the number of ticks, pulses, or divisions in the MIDI event time.
bpm	Provides the tempo of the song, in beats/minute.
ppqn	Provides the pulses-per-quarter-note of the song.

## Returns

Returns the time-string representation of the pulse (ticks) value.

const midi\_timing & timinginfo )

See the other pulses\_to\_timestring() overload.

Todo Still needs to be unit tested.

## **Parameters**

р	Provides the number of ticks, pulses, or divisions in the MIDI event time.
timinginfo	Provides the tempo of the song, in beats/minute, and the pulse-per-quarter-note of the song.

## Returns

Returns the return-value of the other pulses\_to\_timestring() function.

## 12.2.4.8 measurestring\_to\_pulses()

#### **Parameters**

measures	Provides the current MIDI song time in "measures:beats:divisions" format, where divisions are the MIDI pulses in "pulses-per-quarter-note".
seqparms	This small structure provides the beats/measure, beat-width, and PPQN that hold for the sequence involved in this calculation.

## Returns

Returns the absolute pulses that mark this duration. If the input string is empty, then 0 is returned.

## 12.2.4.9 midi\_measures\_to\_pulses()

p = 4 \* P \* m \* B / W p == pulse count (ticks or pulses) m == number of measures B == beats per measure (constant) P == pulses per quarter-note (constant) W == beat width in beats per measure (constant)

Note that the 0-pulse MIDI measure is "1:1:0", which means "at the beginning of the first beat of the first measure, no pulses'. It is not "0:0:0" as one might expect.

#### **Parameters**

measures	Provides the current MIDI song time structure holding the measures, beats, and divisions values
	for the time of interest.
seqparms	This small structure provides the beats/measure, beat-width, and PPQN that hold for the sequence involved in this calculation.

## Returns

Returns the absolute pulses that mark this duration. If the pulse-value cannot be calculated, then SEQ64 $_{\leftarrow}$  NULL\_MIDIPULSE is returned.

## 12.2.4.10 timestring\_to\_pulses()

timestring	The time value to be converted, which must be of the form "hh:mm:ss" or "hh:mm:ss.fraction".
bpm	The beats-per-minute tempo (e.g. 120) of the current MIDI song.
ppqn	The parts-per-quarter note precision (e.g. 192) of the current MIDI song.

Returns 0 if an error occurred or if the number actually translated to 0.

This conversion assumes that the fractional parts of the seconds is padded with zeroes on the left or right to 6 digits.

This conversion assumes that the fractional parts of the seconds is padded with zeroes on the left or right to 6 digits.

## 12.2.4.11 string\_to\_pulses()

First, the type of string is deduced by the characters in the string. If the string contains two colons and a decimal point, it is assumed to be a time-string ("hh:mm:ss.frac"); in addition ss will have to be less than 60.

If the string just contains two colons, then it is assumed to be a measure-string ("measures:beats:divisions").

If it has none of the above, it is assumed to be pulses. Testing is not rigorous.

#### **Parameters**

s	Provides the string to convert to pulses.
mt	Provides the structure needed to provide BPM and other values needed for some of the conversions done by this function.

# Returns

Returns the string as converted to MIDI pulses (or divisions, clocks, ticks, whatever you call it).

# 12.2.4.12 string\_to\_midibyte()

```
midibyte seq64::string_to_midibyte ( const std::string & s)
```

This function bypasses characters until it finds a digit (whether part of the number or a "0x" construct), and then converts it.

## **Parameters**

s Provides the string to convert to a MIDI byte.

#### Returns

Returns the MIDI byte value represented by the string.

## 12.2.4.13 shorten\_file\_spec()

This is done by removing character in the middle, if necessary, and replacing them with an ellipse.

This function operates by first trying to find the <code>/home directory</code>. If found, it strips off <code>/home/username and</code> replace it with the Linux  $\sim$  replacement for the \$HOME environment variable. This function assumes that the "username" portion *must* exist, and that there's no goofy stuff like double-slashes in the path.

#### **Parameters**

fpat	The file specification, including the full path to the file, and the name of the file.
leng	Provides the length to which to limit the string.

#### Returns

Returns the fpath parameter, possibly shortened to fit within the desired length.

### 12.2.4.14 string\_not\_void()

```
bool seq64::string_not_void ( {\tt const\ std::string\ \&\ s\ )}
```

Provides essentially the opposite test that <a href="mailto:string\_is\_void">string\_is\_void</a>() provides. The definition of white-space is provided by the std::isspace() function/macro.

### **Parameters**

s The string pointer to check for emptiness.

## Returns

Returns true if the pointer is valid, the string has a non-zero length, and is not just white-space.

## 12.2.4.15 string\_is\_void()

Meant to have essentially the opposite result of string\_not\_void(). The meaning of empty is special here, as it refers to a string being useless as a token:

```
    The string is of zero length.
    The string has only white-space characters in it, where the isspace() macro provides the definition of white-space.
```

#### **Parameters**

s The string pointer to check for emptiness.

## Returns

Returns true if the string has a zero length, or is only white-space.

## 12.2.4.16 strings\_match()

The strings\_match() function returns true if the comparison items are identical, without case-sensitivity in character content up to the length of the secondary string. This allows abbreviations to match. (And, in scanning routines, the first match is immediately accepted.)

## **Parameters**

target	The primary string in the comparison. This is the target string, the one we hope to match. It is assumed to be non-empty, and the result is false if it is empty.
X	The secondary string in the comparison. It must be no longer than the target string, or the match is
	false.

## Returns

Returns true if both strings are are identical in characters, up to the length of the secondary string, with the case of the characters being insignificant. Otherwise, false is returned.

# 12.2.4.17 log2\_time\_sig\_value()

Useful in converting a time signature's denominator to a Time Signature meta event's "dd" value.

## **Parameters**

tsd The time signature denominator, which must be a power of 2: 2, 4, 8, 16, or 32.

## Returns

Returns the power of 2 that achieves the tsd parameter value.

## 12.2.4.18 tempo\_us\_to\_bytes()

Recall the format of a Tempo event:

0 FF 51 03 t2 t1 t0 (tempo as number of microseconds per quarter note)

This code is the inverse of the lines of code around line 768 in midifile.cpp, which is basically ((t2 \* 256) + t1) \* 256 + t0 .

As a test case, note that the default tempo is 120 beats/minute, which is equivalent to ttttt=500000 (0x07A120).

#### **Parameters**

t	Provides a small array of 3 elements to hold each tempo byte.
tempo_us	Provides the temp value in microseconds per quarter note.

## 12.2.4.19 zoom\_power\_of\_2()

The default starting zoom is 2, but this value is suitable only for PPQN of 192 and below. Also, zoom currently works consistently only if it is a power of 2. For starters, we scale the zoom to the selected ppqn, and then shift it each way to get a suitable power of two.

## **Parameters**

ppqn	The ppqn of interest.

### Returns

Returns the power of 2 appropriate for the given PPQN value.

## 12.2.4.20 beats\_per\_minute\_from\_tempo\_us()

The tempo event's numeric value is given in 3 bytes, and is in units of microseconds-per-quarter-note (us/qn).

tempous	The value of the Tempo meta-event, in units of us/qn. If this value is 0, we'll get an arithmetic	
	exception.	

Returns the beats per minute. If the tempo value is too small, then this function will crash. :-D

## 12.2.4.21 tempo\_us\_from\_beats\_per\_minute()

## **Parameters**

bpm The value of beats-per-minute. If this value is 0, we'll get an arithmetic exception.

## Returns

Returns the tempo in qn/us. If the bpm value is too small, then this function will crash. :-D

## 12.2.4.22 tempo\_to\_us()

120 beats/minute) to microseconds.

# **Parameters**

bpm Provides the tempo in beats/minute.

## 12.2.4.23 pulse\_length\_us()

The formula for the pulse-length in seconds is:

bpm	Provides the beats-per-minute value. No sanity check is made. If this value is 0, we'll get an arithmetic exception.	
ppqn	pqn Provides the pulses-per-quarter-note value. No sanity check is made. If this value is 0, we'll get an	
	arithmetic exception.	

Returns the pulse length in microseconds. If either parameter is invalid, then this function will crash. :-D

#### 12.2.4.24 delta\_time\_us\_to\_ticks()

This function is the inverse of ticks\_to\_delta\_time\_us().

Please note that terms "ticks" and "pulses" are equivalent, and refer to the "pulses" in "pulses per quarter note".

```
beats pulses 1 minute 1 sec
P = 120 ----- * 192 ----- * T us * ------ * -----
minute beats 60 sec 1,000,000 us
```

Note that this formula assumes that a beat is a quarter note. If a beat is an eighth note, then the P value would be halved, because there would be only 96 pulses per beat. We will implement an additional function to account for the beat; the current function merely blesses some calculations made in the application.

#### **Parameters**

us	The number of microseconds in the delta time.
bpm	Provides the beats-per-minute value, otherwise known as the "tempo".
ppqn	Provides the pulses-per-quarter-note value, otherwise known as the "division".

## Returns

Returns the tick value.

## 12.2.4.25 ticks\_to\_delta\_time\_us()

The inverse of delta\_time\_us\_to\_ticks().

Please note that terms "ticks" and "pulses" are equivalent, and refer to the "pulses" in "pulses per quarter note".

Old:  $6000000.0 * double(delta\_ticks) / (double(bpm) * double(ppqn));$ 

delta_ticks	The number of ticks or "clocks".	
bpm	Provides the beats-per-minute value, otherwise known as the "tempo".	
ppqn	Provides the pulses-per-quarter-note value, otherwise known as the "division".	G

Returns the time value in microseconds.

## 12.2.4.26 clock\_tick\_duration\_bogus()

**Deprecated** This is a somewhat bogus calculation used only for "statistical" output in the old perform module. Name changed to reflect this unfortunate fact. Use <a href="mailto:pulse\_length\_us()">pulse\_length\_us()</a> instead.

```
60000000 ppqn
us = ------
MIDI_CLOCK_IN_PPQN * bpm * ppqn

MIDI_CLOCK_IN_PPQN is 24.
```

#### **Parameters**

bpm	Provides the beats-per-minute value. No sanity check is made. If this value is 0, we'll get an arithmetic exception.
ppqn	Provides the pulses-per-quarter-note value. No sanity check is made. If this value is 0, we'll get an arithmetic exception.

## Returns

Returns the clock tick duration in microseconds. If either parameter is invalid, this will crash. Who wants to waste time on value checks here? :-D

## 12.2.4.27 clock\_ticks\_from\_ppqn()

## **Parameters**

ppqn	The number of pulses per quarter note. For example, the default value for Seq24 is 192.
------	---

## Returns

The integer value of ppqn / 24 [MIDI\_CLOCK\_IN\_PPQN] is returned.

## 12.2.4.28 double\_ticks\_from\_ppqn()

The same as clock\_ticks\_from\_ppqn(), but returned as a double float.

### **Parameters**

```
ppqn The number of pulses per quarter note.
```

#### Returns

The double value of ppqn / 24 [SEQ64\_MIDI\_CLOCK\_IN\_PPQN]\_is returned.

#### 12.2.4.29 pulses\_per\_measure()

This calculation is extremely simple, and it provides an important constraint to pulse (ticks) calculations: the number of pulses in a measure is always 4 times the PPQN value, regardless of the time signature. The number pulses in a 7/8 measure is the the same as in a 4/4/ measure.

#### 12.2.4.30 measures\_to\_ticks()

This function is called in seqedit::apply\_length(), when the user selects a sequence length in measures. That function calculates the length in ticks. The number of pulses is given by the number of quarter notes times the pulses per quarter note. The number of quarter notes is given by the measures times the quarter notes per measure. The quarter notes per measure is given by the beats per measure times 4 divided by beat\_width beats. So:

bpm	The B value in the equation, beats/measure.	
ppqn	The P value in the equation, pulses/qn.	
bw	The W value in the equation, the denominator of the time signature. If this value is 0, we'll get an arithmetic exception (crash), so we just return 0 in this case.	
measures	neasures The M value in the equation. It defaults to 1, in case one desires a simple "ticks per measure"	
	number. Generated by Doxygen	

Returns the L value (ticks or pulses) as calculated via the given equation. If bw is 0, then 0 is returned.

## 12.2.4.31 wave\_func()

We extracted this function from mattias's Ifownd module, as it is more generally useful. The angle parameter is provided by the Ifownd object. It is calculated by

The speed ranges from 0 to 16; the ratio of tick/seqlength ranges from 0 to 1; BW (beat width) is generally 4; the phase ranges from 0 to 1.

#### **Parameters**

angle	Provides the radial angle to be applied. Units of radians, apparently.
wavetype	Provides the wave_type_t value to select the type of wave data-point to be generated.

# 12.2.4.32 help\_check()

Also check for the –legacy option. Finally, it also checks for the "?" option that people sometimes use as a guess to get help.

# **Parameters**

	argc	The number of command-line arguments.
ĺ	argv	The array of command-line argument pointers.

## Returns

Returns true only if -v, -V, -version, -h, -help, or "?" were encountered. If the legacy options occurred, then rc().legacy\_format(true) is called, as a side effect, because it will be needed before we parse the options.

## 12.2.4.33 parse\_options\_files()

```
bool seq64::parse_options_files ( perform \& p,
```

```
int argc,
char * argv[] )
```

It probably requires this call preceding: Gtk::Main kit(argc, argv), to strip any GTK+-specific parameters the knowledgeable user may have added. Usage:

```
Gtk::Main kit(argc, argv);
seq64::gui_assistant_gtk2 gui;
seq64::perform p(gui);
```

It also requires the caller to call rc().set\_defaults() and usr().set\_defaults(). The caller can then use the command-line to make any modifications to the setting that will be used here. The biggest example is the -r/-reveal-alsa-ports option, which determines if the MIDI buss definition strings are read from the 'user' configuration file.

Instead of the legacy Seq24 names, we use the new configuration file-names, located in the  $\sim$ /.config/sequencer64 directory. However, if they are not found, we no longer fall back to the legacy configuration file-names. If the – legacy option is in force, use only the legacy configuration file-name. The code also ensures the directory exists. CURRENTLY LINUX-SPECIFIC. See the rc\_settings class for how this works.

```
std::string cfg_dir = seq64::rc().home_config_directory();
if (cfg_dir.empty())
    return EXIT_FAILURE;
```

Change Note ca 2016-04-03 We were parsing the user-file first, but we now need to parse the rc-file first, to get the manual-alsa-ports option, so that we can avoid overriding the port names that the ALSA system provides, if the manual-alsa-option is false.

## **Parameters**

р	Provides the perform object that will be affected by the new parameters.	
argc	The number of command-line arguments.	
argv	The array of command-line argument pointers.	

## Returns

Returns true if the reading of both configuration files succeeded.

### 12.2.4.34 parse\_command\_line\_options()

Note that, since we call this function twice (once before the configuration files are parsed, and once after), we have to make sure that the global value optind is reset to 0 before calling this function. Note that the traditional reset value for optind is 1, but 0 is used in GNU code to trigger the internal initialization routine of get\_opt().

р	The performance object that implements some of the command-line options.	
argc	The number of command-line arguments.	
argv	The array of command-line argument pointers.	

Returns the value of optind if no help-related options were provided.

## 12.2.4.35 write\_options\_files()

This function gets any legacy global variables, on the theory that they might have been changed.

#### **Parameters**

p Provides the perform object that may provide new values for the parameters.

#### Returns

Returns true if both files were saved successfully. Otherwise returns false. But even if one write failed, the other might have succeeded.

## 12.2.4.36 build\_details()

```
std::string seq64::build_details ( )
```

## Returns

Returns an ordered, human-readable string enumerating the built-in features of this application.

# 12.2.4.37 to\_string()

Nothing fancy. If you want that, use the midicvt project.

### **Parameters**

```
ev The event to put on show.
```

## Returns

Returns the string representation of the event parameter.

## 12.2.4.38 file\_access()

## 12.2.4.39 file\_exists()

## **Parameters**

## Returns

Returns 'true' if the file exists.

## 12.2.4.40 file\_readable()

#### **Parameters**

filename	Provides the name of the file to be checked.
----------	--

## Returns

Returns 'true' if the file is readable.

# 12.2.4.41 file\_writable()

## **Parameters**

C'I	D 11 0 (0 (1 ) 1 )
Tilename	Provides the name of the file to be checked.

# Returns

Returns 'true' if the file is writable.

# 12.2.4.42 file\_accessible()

An even stronger test than file\_exists. At present, we see no need to distinguish read and write permissions. We assume the file is accessible only if the file has both permissions.

#### **Parameters**

filename	Provides the name of the file to be checked.	
----------	--	--

# Returns

Returns 'true' if the file is readable and writable.

## 12.2.4.43 file\_executable()

## **Parameters**

filename	Provides the name of the file to be checked.
----------	--

## Returns

Returns 'true' if the file exists.

## 12.2.4.44 file\_is\_directory()

This function is also used in the function of the same name in fileutilities.cpp.

#### **Parameters**

## Returns

Returns 'true' if the file is a directory.

# 12.2.4.45 make\_directory()

This function is actually a little more general than that, but it is not sufficiently general, in general.

Returns true if the path-name exists.

## 12.2.4.46 ppqn\_is\_valid()

Validates a PPQN value.

#### **Parameters**

ppq	n	Provides the PPQN value to be used.
-----	---	-------------------------------------

## Returns

Returns true if the ppqn parameter is between MINIMUM\_PPQN and MAXIMUM\_PPQN, or is set to SE $\leftarrow$  Q64\_USE\_DEFAULT\_PPQN (-1).

## 12.2.4.47 jack\_sync\_callback()

```
int seq64::jack_sync_callback (
          jack_transport_state_t state,
          jack_position_t * pos,
          void * arg )
```

This JACK synchronization callback informs the specified perform object of the current state and parameters of JACK.

The transport state will be:

JackTransportStopped when a new position is requested.
 JackTransportStarting when the transport is waiting to start.
 JackTransportRolling when the timeout has expired, and the position is now a moving target.

This is the slow-sync callback, which the stazed code replaces with jack\_process\_callback().

### **Parameters**

state	The JACK Transport state.	
pos	The JACK position value.	
arg	The pointer to the jack_assistant object. Currently not checked for nullity, nor dynamic-casted.	

## Returns

Returns 1 if the function works, and 0 if something was wrong.

## 12.2.4.48 jack\_shutdown\_callback()

```
void seq64::jack_shutdown_callback (
             void * arg )
```

#### **Parameters**

Points to the jack assistant in charge of JACK support for the perform object.

## 12.2.4.49 jack\_timebase\_callback()

```
void seq64::jack_timebase_callback (
             jack transport state t state,
             jack_nframes_t nframes,
             jack_position_t * pos,
             int new_pos,
             void * arg )
```

The original version of the function worked properly with Hydrogen, but not with Klick. The new code seems to work with both. More testing and clarification is needed. This new code was "discovered" in the source-code for the "SooperLooper" project:

```
http://essej.net/sooperlooper/
```

The first difference with the new code is that it handles the case where the JACK position is moved (new pos == true). If this is true, and the JackPositionBBT bit is off in pos->valid, then the new BBT value is set.

The seconds set of differences are in the "else" clause. In the new code, it is very simple: calculate the new tick value, back it off by the number of ticks in a beat, and perhaps go to the first beat of the next bar.

In the old code (complex!), the simple BBT adjustment is always made. This changes (perhaps) the beats per bar, beat\_type, etc. We need to make these settings use the actual global values for beats set for Sequencer64. Then, if transitioning from JackTransportStarting to JackTransportRolling (instead of checking new post), the BBT values (bar, beat, and tick) are finally adjusted. Here are the steps, with old and new steps noted:

```
-# Calculate the "delta" ticks based on the current frame, the
   ticks_per_beat, the beats_per_minute, and the frame_rate. The old
   code saves this in a local, the new code assigns it to pos->tick.
```

Old code: save this delta as a positive value.

Figure out the settings and modify bar, beat, tick, and bar\_start\_tick. The old and new code seem to have the same intent, but it seems like the new code is faster and also correct. Old code: Calculations are made by division and mod

operations. New code: Calculations are made by increments and decrements in a while loop.

## Stazed:

The call to jack\_timebase\_callback() to supply JACK with BBT, etc. would occasionally fail when the pos information had zero or some garbage in the pos.frame\_rate variable. This would occur when there was a rapid change of frame position by another client... i.e. qjackctl. From the JACK APT:

address of the position structure for the next cycle; pos->frame will be its frame number. If new\_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase\_callback's task is to update the extended information here.  $\tt "$ 

The "If TRUE" line seems to be the issue. It seems that gjackctl does not always set pos.frame\_rate so we get garbage and some strange BBT calculations that display in qjackctl. So we need to set it here and just use m\_jack\_frame\_rate for calculations instead of pos.frame\_rate.

#### **Parameters**

state	Indicates the current state of JACK transport.
nframes	The number of JACK frames in the current time period.
pos	Provides the position structure to be filled in, the address of the position structure for the next cycle; pos->frame will be its frame number. If new_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase_callback's task is to update the extended information here.
new_pos	TRUE (non-zero) for a newly requested pos, or for the first cycle after the timebase_callback is defined. This is usually 0 in Sequencer64 at present, and 1 if one, say, presses "rewind" in qjackctl.
arg	Provides the jack_assistant pointer, currently unchecked for nullity.

## 12.2.4.50 jack\_process\_callback()

```
int seq64::jack_process_callback (
          jack_nframes_t nframes,
          void * arg )
```

## 12.2.4.51 get\_current\_jack\_position()

```
long seq64::get_current_jack_position ( \mbox{void} \ * \ \mbox{\it arg} \ )
```

## 12.2.4.52 jack\_session\_callback()

```
void seq64::jack_session_callback (
          jack_session_event_t * ev,
          void * arg )
```

Glib is then used to connect in perform::jack\_session\_event(). However, the perform object's GUI-support interface is used instead of the following, so that the libseq64 library can be independent of a specific GUI framework:

```
Glib::signal_idle().
    connect(sigc::mem_fun(*jack, &jack_assistant::session_event));
```

# Parameters

ev	The JACK event to be set.
arg	The pointer to the jack_assistant object. Currently not checked for nullity.

## 12.2.4.53 invalid\_key()

```
bool seq64::invalid_key (
          unsigned int key ) [inline]
```

## 12.2.4.54 keyval\_name()

In gtkmm, this is done via the gdk\_keyval\_name() function. Here, in the base class, we just provide an easy-to-create string. Note that this is a free function, not a class member.

#### **Parameters**

key	Provides the key-number to be converted to a key name.
-----	--

#### Returns

Returns the key name as looked up by the GDK infrastructure. If the key is not found, then an empty string is returned.

# 12.2.4.55 keyval\_normalize()

Otherwise, random values, unchecked, can cause the application to crash.

Any field that is 0 or greater than 65536 is fixed. Not perfect, but better than allowing random values to be used.

## **Parameters**

k The structure to be validated and normalized.

## 12.2.4.56 create\_lash\_driver()

Initializes the lash driver (strips lash-specific command line arguments), then connects to the LASH daemon and polls events.

This function will always be called from the main routine, and called only once. Note that we don't need that darn SEQ64 LASH SUPPORT macro in client code anymore.

р	The perform object that needs to implement LASH support.
argc	The number of command-line arguments.
argv	The command-line arguments.

This function returns true if a lash object was created. This function will not create one if not configured to, if the command-line options did not specify the creation of the LASH driver, or if the LASH driver was already created.

## 12.2.4.57 lash\_driver()

```
lash * seq64::lash_driver ( )
```

## Returns

Returns the pointer to the LASH driver if it exists. Otherwise a null pointer is returned. The caller *must always check* the return value.

## 12.2.4.58 delete\_lash\_driver()

```
void seq64::delete_lash_driver ( )
```

This function will always be called from the main routine, once. The other lash-pointer functions will know if the pointer has been deleted.

## 12.2.4.59 is\_null\_midipulse()

By "null" in this case, we mean "unusable", not 0. Sigh, it's always something.

## 12.2.4.60 output\_thread\_func()

Set up the performance, set the process to realtime privileges, and then start the output function.

## **Parameters**

myperf Provides the perform object instance that is to be used. Its output\_func() is called. Currently, this parameter is not validated, for speed.

## Returns

Always returns nullptr.

## 12.2.4.61 input\_thread\_func()

## **Parameters**

myperf
--------

Provides the perform object instance that is to be used. Its output\_func() is called. Currently, this parameter is not validated, for speed.

## Returns

Always returns nullptr.

## 12.2.4.62 rc()

```
rc_settings & seq64::rc ( )
```

Why a function instead of direct variable access? Encapsulation. We are then free to change the way "global" settings are accessed, without changing client code.

## Returns

Returns the global object g\_rc\_settings.

## 12.2.4.63 usr()

```
user_settings & seq64::usr ( )
```

## Returns

Returns the global object g\_user\_settings.

# 12.2.4.64 choose\_ppqn()

Putting it here means we can reduce the reliance on the global ppqn.

ppan	Provides the PPQN value to be used.
PPGII	i i i o vide s tile i i i i i valde to be doed.

Returns the ppqn parameter, unless that parameter is SEQ64\_USE\_DEFAULT\_PPQN (-1), then usr().midi ← \_ppqn is returned.

#### 12.2.4.65 min()

```
long seq64::min (
          long a,
          long b) [inline]
```

#### **Parameters**

а	First operand.
b	Second operand.

#### Returns

Returns the minimum value of a and b.

## 12.2.4.66 make\_section\_name()

## **Parameters**

label	The base-name of the section.
value	The numeric value to append to the section name.

## Returns

Returns a string of the form "[basename-1]".

## 12.2.4.67 font\_render()

```
font& seq64::font_render ( ) [inline]
```

We've going to render this pointer obsolete, though, and use a smart factory function to ensure the existence of this pointer, and return a reference to the font object.

We wanted to make the font a const object, but mainwid::on\_realize() calls the font::init() function with its window object, and using const is impractical. We don't want to force every caller to deal with the overhead of passing even a null window pointer, either.

However, at some point we need some quarantee that the init() function is called before rendering a string. Right now, we guarantee it only by build order.

## Returns

Returns a reference to the object pointed to by sp\_font\_renderer.

## 12.2.4.68 adjustment\_dummy()

```
Gtk::Adjustment & seq64::adjustment_dummy ( )
```

This static object is used so we have an Adjustment to assign to the Adjustment members for classes that don't use them. Clumsy? We shall see.

Anyway, the parameters for this constructor are value, lower, upper, step-increment, and two more values.

## 12.2.4.69 update\_mainwid\_sequences()

```
void seq64::update_mainwid_sequences ( )
```

It is used by other objects that can modify the currently-edited sequence shown in the mainwid (main window).

## 12.2.4.70 update\_perfedit\_sequences()

```
void seq64::update_perfedit_sequences ( )
```

It is used by other objects (seqedit and eventedit) that can modify the currently-edited sequence shown in the perfedit (song window).

## 12.2.4.71 FF\_RW\_timeout()

```
int seq64::FF_RW_timeout ( \label{eq:condition} \mbox{void} \ * \ \mbox{\it arg} \ ) \quad \mbox{[inline]}
```

# Parameters

arg Provides a putative pointer to the perform object that actually implements the timeout functionality.

# Returns

Returns the value of the perform::FF\_RW\_timeout() call if seq32 transport support is enabled and the arg parameter is good, otherwise false is returned.

## **12.2.4.72** clamp() [1/2]

## 12.2.5 Variable Documentation

#### 12.2.5.1 c\_controller\_names

```
std::string seq64::c_controller_names
```

This array is used only by the seqedit class.

# 12.2.5.2 EVENT\_STATUS\_BIT

```
const midibyte seq64::EVENT_STATUS_BIT
```

### 12.2.5.3 **EVENT\_ANY**

```
const midibyte seq64::EVENT_ANY
```

The following MIDI events are channel messages. The comments represent the one or two data-bytes of the message.

Note that Channel Mode Messages use the same code as the Control Change, but uses reserved controller numbers ranging from 122 to 127.

The EVENT\_ANY (0x00) value may prove to be useful in allowing any event to be dealt with. Not sure yet, but the cost is minimal.

## 12.2.5.4 EVENT\_NOTE\_OFF

```
const midibyte seq64::EVENT_NOTE_OFF
```

# 12.2.5.5 EVENT\_NOTE\_ON

```
const midibyte seq64::EVENT_NOTE_ON
```

## 12.2.5.6 EVENT\_AFTERTOUCH

```
const midibyte seq64::EVENT_AFTERTOUCH
```

# 12.2.5.7 EVENT\_CONTROL\_CHANGE

```
const midibyte seq64::EVENT_CONTROL_CHANGE
```

## 12.2.5.8 EVENT\_PROGRAM\_CHANGE

```
const midibyte seq64::EVENT_PROGRAM_CHANGE
```

## 12.2.5.9 EVENT\_CHANNEL\_PRESSURE

```
const midibyte seq64::EVENT_CHANNEL_PRESSURE
```

## 12.2.5.10 EVENT\_PITCH\_WHEEL

```
const midibyte seq64::EVENT_PITCH_WHEEL
```

## 12.2.5.11 EVENT\_MIDI\_SYSEX

```
const midibyte seq64::EVENT_MIDI_SYSEX
```

The following MIDI events have no channel. We have included redundant constant variables for the SysEx Start and End bytes just to make it clear that they are part of this sequence of values, though usually treated separately.

Only the following constants are followed by some data bytes:

```
- EVENT_MIDI_SYSEX = 0xF0
- EVENT_MIDI_QUARTER_FRAME = 0xF1 // undefined?
- EVENT_MIDI_SONG_POS = 0xF2
- EVENT_MIDI_SONG_SELECT = 0xF3
```

A MIDI System Exclusive (SYSEX) message starts with F0, followed by the manufacturer ID (how many? bytes), a number of data bytes, and ended by an F7.

## 12.2.5.12 EVENT\_MIDI\_QUARTER\_FRAME

```
const midibyte seq64::EVENT_MIDI_QUARTER_FRAME
```

## 12.2.5.13 EVENT\_MIDI\_SONG\_POS

```
const midibyte seq64::EVENT_MIDI_SONG_POS
```

# 12.2.5.14 EVENT\_MIDI\_SONG\_SELECT

```
const midibyte seq64::EVENT_MIDI_SONG_SELECT
```

#### 12.2.5.15 EVENT MIDI SONG F4

```
const midibyte seq64::EVENT_MIDI_SONG_F4
```

## 12.2.5.16 EVENT\_MIDI\_SONG\_F5

```
const midibyte seq64::EVENT_MIDI_SONG_F5
```

# 12.2.5.17 EVENT\_MIDI\_TUNE\_SELECT

```
const midibyte seq64::EVENT_MIDI_TUNE_SELECT
```

## 12.2.5.18 EVENT\_MIDI\_SYSEX\_END

```
const midibyte seq64::EVENT_MIDI_SYSEX_END
```

## 12.2.5.19 EVENT\_MIDI\_SYSEX\_CONTINUE

```
const midibyte seq64::EVENT_MIDI_SYSEX_CONTINUE
```

## 12.2.5.20 EVENT\_MIDI\_CLOCK

```
const midibyte seq64::EVENT_MIDI_CLOCK
```

## 12.2.5.21 EVENT\_MIDI\_SONG\_F9

```
const midibyte seq64::EVENT_MIDI_SONG_F9
```

# 12.2.5.22 EVENT\_MIDI\_START

```
const midibyte seq64::EVENT_MIDI_START
```

## 12.2.5.23 EVENT\_MIDI\_CONTINUE

```
const midibyte seq64::EVENT_MIDI_CONTINUE
```

## 12.2.5.24 EVENT\_MIDI\_STOP

```
const midibyte seq64::EVENT_MIDI_STOP
```

## 12.2.5.25 EVENT MIDI\_SONG\_FD

```
const midibyte seq64::EVENT_MIDI_SONG_FD
```

# 12.2.5.26 EVENT\_MIDI\_ACTIVE\_SENS

```
const midibyte seq64::EVENT_MIDI_ACTIVE_SENS
```

## 12.2.5.27 EVENT\_MIDI\_RESET

```
const midibyte seq64::EVENT_MIDI_RESET
```

## 12.2.5.28 EVENT\_MIDI\_META

```
const midibyte seq64::EVENT_MIDI_META
```

## 12.2.5.29 EVENT\_NULL\_CHANNEL

```
const midibyte seq64::EVENT_NULL_CHANNEL
```

However, it also means that the channel is encoded in the m\_status byte itself. This is our work around to be able to hold a multi-channel SMF 0 track in a sequence. In a Sequencer64 SMF 0 track, every event has a channel. In a Sequencer64 SMF 1 track, the events do not have a channel. Instead, the channel is a global value of the sequence, and is stuffed into each event when the event is played or is written to a MIDI file.

## 12.2.5.30 EVENT\_GET\_CHAN\_MASK

```
const midibyte seq64::EVENT_GET_CHAN_MASK
```

## 12.2.5.31 EVENT\_CLEAR\_CHAN\_MASK

```
const midibyte seq64::EVENT_CLEAR_CHAN_MASK
```

## 12.2.5.32 EVENTS\_ALL

```
const int seq64::EVENTS_ALL
```

We reversed the parts of each token for consistency with the macros defined above.

### 12.2.5.33 EVENTS\_UNSELECTED

```
const int seq64::EVENTS_UNSELECTED
```

# 12.2.5.34 c\_midibus\_output\_size

```
const int seq64::c_midibus_output_size
```

These constants were also defined in midibus\_portmidi.h, but we made them common to both implementations here

The c\_midibus\_output\_size value is passed, in mastermidibus, to snd\_seq\_set\_output\_buffer\_size(). Not sure if the value needs to be so large.

## 12.2.5.35 c\_midibus\_input\_size

```
const int seq64::c_midibus_input_size
```

Not sure if the value needs to be so large.

#### 12.2.5.36 c midibus sysex chunk

```
const int seq64::c_midibus_sysex_chunk
```

#### 12.2.5.37 c midibus

```
const midilong seq64::c_midibus
```

Some of the information is stored with each track (and in the midi\_container-derived classes), and some is stored in the proprietary header.

Track (sequencer-specific) data:

```
c_midibus
c_midich
c_timesig
c_triggers (deprecated)
c_triggers_new
c_musickey (can be in footer, as well)
c_musicscale (ditto)
c_backsequence (ditto)
c_transpose
```

## Footer ("proprietary") data:

```
c_midictrl
c_midiclocks
c_notes
c_bpmtag (beats per minute)
c_mutegroups
c_perf_bp_mes (perfedit's beats-per-measure setting)
c_perf_bw (perfedit's beat-width setting)
```

Also see the PDF file in the following project for more information about the "proprietary" data:

https://github.com/ahlstromcj/sequencer64-doc.git

Note that the track data is read from the MIDI file, but not written directly to the MIDI file. Instead, it is stored in the MIDI container as sequences are edited to used these "sequencer-specific" features. Also note that c\_triggers has been replaced by c\_triggers\_new as the code that marks the triggers stored with a sequence.

As an extension, we can also grab the key, scale, and background sequence value selected in a sequence and write these values as track data, where they can be read in and applied to a specific sequence, when the sequence object is created. These values would not be stored in the legacy format.

Something like this could be done in the "user" configuration file, but then the key and scale would apply to all songs. We don't want that.

We could also add snap and note-length to the per-song defaults, but the "user" configuration file seems like a better place to store these preferences.

## Note

The new value c\_transpose value is from Stazed's seq32 project. The code to support this option is turned on via the build-configurable SEQ64\_STAZED\_TRANSPOSE macro, but here we reserved the value even if that option is not enabled by the user. There are additional values from Stazed/seq32, not yet used.Track buss number.

```
12.2.5.38 c_midich
const midilong seq64::c_midich
12.2.5.39 c_midiclocks
const midilong seq64::c_midiclocks
12.2.5.40 c_triggers
const midilong seq64::c_triggers
12.2.5.41 c_notes

const midilong seq64::c_perf_bw
12.2.5.53 c_midi_track_ctrl
const int seq64::c_midi_track_ctrl
The lowest value is c_{seqs_in_set} * 2 = 64.
I think the reason for that value is to perhaps handle two sets or something like that. Will figure it out later.
The controls are read in from the "rc" configuration files, and are written to the c_midictrl section of the "proprietary"
final track in a Seq24/Sequencer64 MIDI file.
12.2.5.54 c_midi_control_bpm_up

## 12.2.5.68 c\_scales\_text

```
const char seq64::c_scales_text[c_scale_size][20]
```

## 12.2.5.69 c\_key\_text

```
const char seq64::c_key_text[SEQ64_OCTAVE_SIZE][4]
```

## 12.2.5.70 c\_interval\_text

```
const char seq64::c_interval_text[16][4]
```

## 12.2.5.71 c\_chord\_text

```
const char seq64::c_chord_text[8][6]
```

However, we have not seen this menu in the GUI! Ah, it only appears if the user has selected a musical scale like Major or Minor.

## 12.2.5.72 c\_chord\_number

```
const int seq64::c_chord_number
```

The chord-number is a count of the number of entries in c\_chord\_table\_text. Will never change, luckily.

```
12.2.5.73 c_chord_table_text
```

```
const char seq64::c_chord_table_text[c_chord_number][12]
```

These chords appear in the sequence-editor chord-button dropdown menu. The longest string is 11 characters, and we add one for the null terminator. A good case for using std::string here. :-)

## 12.2.5.74 c\_chord\_size

```
const int seq64::c_chord_size
```

## 12.2.5.75 c\_chord\_table

```
const int seq64::c_chord_table[c_chord_number][c_chord_size]
```

These values indicate the note offsets needed for a particular kind of chord. 0 means no offset, and a -1 ends the list of note offsets for the chord.

## 12.2.5.76 c\_max\_instruments

```
const int seq64::c_max_instruments
```

With a value of 64, this is more of a sanity-check than a realistic number of instruments defined by a user.

## 12.2.5.77 c\_max\_busses

```
const int seq64::c_max_busses
```

## 12.2.5.78 versiontext

```
const std::string seq64::versiontext [static]
```

This value ultimately comes from the configure.ac script.

This was too redundant:

```
SEQ64_PACKAGE " " SEQ64_VERSION " (" SEQ64_GIT_VERSION ") " DATE "\n"
```

# 12.2.5.79 long\_options

```
struct option seq64::long_options[] [static]
```

Note the terminating null structure..

```
12.2.5.80 s_arg_list
```

```
const std::string seq64::s_arg_list [static]
```

The following string keeps track of the characters used so far. An 'x' means the character is used; an 'o' means it is used for the legacy spelling of the option, which uses underscores instead of hyphens. An 'a' indicates we could repurpose the key with minimal impact.

```
0123456789 @AaBbCcDdEeFfGgHhIiJjKkLlMmNnOoPpQqRrSsTtUuVvWwXxYyZz
        Previous arg-list, items missing! "ChVH:lRrb:q:Lni:jJmaAM:pPusSU:x:"

12.2.5.105 s_seq32_menu_buttons
const std::string seq64::s_seq32_menu_buttons [static]
const std::string seq64::s_seq32_lfo_support [static]
12.2.5.107 s_character_mapping
```

struct charpair\_t seq64::s\_character\_mapping[]

## 12.2.5.108 s\_global\_lash\_driver

```
lash* seq64::s_global_lash_driver [static]
```

It is actually hidden in this module now, so that a function can be used in its place.

Like the font renderer, This item was once created in the main module, sequencer64.cpp. Now we make it a safer, more fool-proof, function. However, unlike the font-render, which always exists, the LASH driver is conditional, and might not be wanted. Therefore, we cannot return a reference, because there's no such thing as a null reference in C++. We have to return a pointer.

Note how they specify different bit values, as it they could be masked together to signal multiple functions.

```
12.2.5.109 c_status_replace
```

This value signals the "replace" functionality.

const int seq64::c\_status\_replace [static]

```
12.2.5.110 c_status_snapshot
```

```
const int seq64::c_status_snapshot [static]
```

## 12.2.5.111 c\_status\_queue

```
const int seq64::c_status_queue [static]
```

## 12.2.5.112 g\_rc\_settings

```
rc_settings seq64::g_rc_settings [static]
```

# 12.2.5.113 g\_user\_settings

```
user_settings seq64::g_user_settings [static]
```

# **12.2.5.114** s\_handlesize [1/2]

```
const long seq64::s_handlesize [static]
```

# 12.2.5.115 s\_jitter\_amount

```
const int seq64::s_jitter_amount [static]
```

## 12.2.5.116 gs\_mainwid\_pointer

```
mainwid* seq64::gs_mainwid_pointer [static]
```

We have decided that passing along a mainwnd reference among a number of constructors is too much and actually harder to understand and more error prone. This value is set at the end of the mainwnd constructor, but only the first time that constructor is called.

```
12.2.5.117 c_mainwid_x

const int seq64::c_mainwid_x

Affected by the c_mainwid_border and c_mainwid_spacing values.

12.2.5.118 c_mainwid_y

const int seq64::c_mainwid_y

12.2.5.119 gs_perfedit_pointer_0

perfedit* seq64::gs_perfedit_pointer_0 [static]

12.2.5.120 gs_perfedit_pointer_1

perfedit* seq64::gs_perfedit_pointer_1 [static]

12.2.5.121 s_handlesize [2/2]

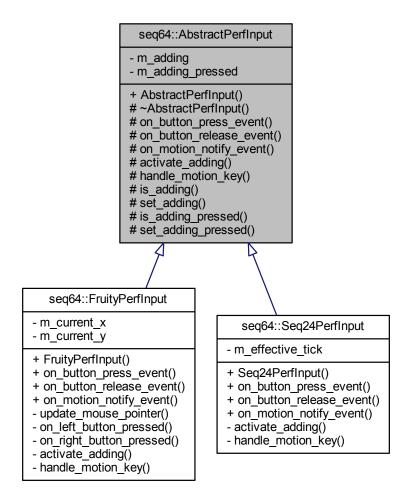

const long seq64::s_handlesize [static]
```

# **Chapter 13**

# **Data Structure Documentation**

# 13.1 seq64::AbstractPerfInput Class Reference

Provides an abstract base class to provide the minimal interface for the various "perf input" classes. Inheritance diagram for seq64::AbstractPerfInput:

## **Public Member Functions**

AbstractPerfInput ()

Default constructor.

## **Protected Member Functions**

virtual ∼AbstractPerfInput ()

Destructor, does nothing.

- virtual bool on\_button\_press\_event (GdkEventButton \*a\_ev, perfroll &roll)=0
- virtual bool on\_button\_release\_event (GdkEventButton \*a\_ev, perfroll &roll)=0
- virtual bool on\_motion\_notify\_event (GdkEventMotion \*a\_ev, perfroll &roll)=0
- virtual void activate\_adding (bool adding, perfroll &roll)=0
- virtual bool handle\_motion\_key (bool is\_left, perfroll &roll)=0
- bool is\_adding () const

'Getter' function for member m\_adding

void set\_adding (bool flag)

'Setter' function for member m\_adding

• bool is\_adding\_pressed () const

'Getter' function for member m\_adding\_pressed

void set\_adding\_pressed (bool flag)

'Setter' function for member m\_adding\_pressed

# **Private Attributes**

· bool m\_adding

Indicates we are in the middle of adding a sequence segment to the performance.

• bool m\_adding\_pressed

Indicates if the left mouse button is pressed while in adding mode.

## **Friends**

class perfroll

## 13.1.1 Constructor & Destructor Documentation

# 13.1.1.1 AbstractPerfInput()

```
seq64::AbstractPerfInput::AbstractPerfInput ( ) [inline]
```

bool seq64::AbstractPerfInput::m_adding [private]
```

## 13.1.4.2 m\_adding\_pressed

```
bool seq64::AbstractPerfInput::m_adding_pressed [private]
```

# 13.2 seq64::automutex Class Reference

Provides a mutex that locks automatically when created, and unlocks when destroyed.

# **Public Member Functions**

• automutex (mutex &my\_mutex)

Principal constructor gets a reference to a mutex parameter, and then locks the mutex.

∼automutex ()

The destructor unlocks the mutex.

# **Private Member Functions**

- automutex ()
- automutex (const automutex &)
- automutex & operator= (const automutex &)

# **Private Attributes**

mutex & m\_safety\_mutex

Provides the mutex reference to be used for locking.

# 13.2.1 Detailed Description

This has a couple of benefits. First, it is threadsafe in the face of exception handling. Secondly, it can be done with just one line of code.

## 13.2.2 Constructor & Destructor Documentation

## **Parameters**

*my\_mutex* The caller's mutex to be used for locking.

# 13.2.2.4 $\sim$ automutex()

```
seq64::automutex::\sim automutex ( ) [inline]
```

# 13.2.3 Member Function Documentation

## 13.2.3.1 operator=()

## 13.2.4 Field Documentation

## 13.2.4.1 m\_safety\_mutex

```
mutex& seq64::automutex::m_safety_mutex [private]
```

# 13.3 seq64::click Class Reference

Encapsulates any possible mouse click.

# **Public Member Functions**

• click ()

The constructor for class click.

click (int x, int y, int button=SEQ64\_CLICK\_BUTTON\_LEFT, bool press=true, seq\_modifier\_t modkey=SE
 — Q64\_NO\_MASK)

Principal constructor for class click.

• click (const click &rhs)

Provides a stock copy constructor.

• click & operator= (const click &rhs)

Provides a stock principal assignment operator.

• bool is\_press () const

'Getter' function for member m\_is\_press

• bool is\_left () const

'Getter' function for member  $m\_button$  to test for the left button.

• bool is\_middle () const

'Getter' function for member m\_button to test for the middle button.

bool is\_right () const

'Getter' function for member m\_button to test for the right button.

• int x () const

'Getter' function for member  $m\_x$ 

• int y () const

'Getter' function for member m\_y

• int button () const

'Getter' function for member m\_button

• seq\_modifier\_t modifier () const

'Getter' function for member m\_modifier

• bool mod\_control () const

'Getter' function for member m\_modifier tested for Ctrl key.

bool mod\_control\_shift () const

'Getter' function for member m modifier tested for Ctrl and Shift key.

• bool mod\_super () const

'Getter' function for member m\_modifier tested for Mod4/Super/Windows key.

# **Private Attributes**

• bool m\_is\_press

Determines if the click was a press or a release event.

• int m\_x

The x-coordinate of the click.

• int m\_y

The y-coordinate of the click.

• int m\_button

The button that was pressed or released.

• seq\_modifier\_t m\_modifier

The optional modifier value.

# 13.3.1 Detailed Description

Useful in passing more generic events to non-GUI classes.

# 13.3.2 Constructor & Destructor Documentation

```
13.3.2.1 click() [1/3] seq64::click::click ( )
```

Sets all members to false, zero, or the lowest good value.

```
13.3.2.2 click() [2/3]

seq64::click::click (
    int x,
    int y,
    int button = SEQ64_CLICK_BUTTON_LEFT,
    bool press = true,
    seq_modifier_t modkey = SEQ64_NO_MASK )
```

This function is the only way to set value for the click members (other than the copy constructor and principal assignment operator.

# Parameters

X	The putative x value of the button click.
У	The putative y value of the button click.
button	The value of the button that was clicked, set to 1, 2, or 3.
press	Set to true if the event was a button press, false if it was a button release.
modkey	Indicates which modifier key (such as Ctrl or Alt), if any, was pressed at the same time as the click
	action.

It is nice to be explicit about these kinds of functions, even if it gets tedious.

# **Parameters**

*rhs* Provies the source object to be copied.

## 13.3.3 Member Function Documentation

# 13.3.3.1 operator=()

It is nice to be explicit about these kinds of functions, even if it gets tedious.

## **Parameters**

rhs

Provies the source object to be assigned from. The assignment is not made if "this" has the same address as this parameter.

## Returns

Returns a reference to self for usage in a string of assignments.

```
13.3.3.2 is_press()
```

```
bool seq64::click::is_press ( ) const [inline]

13.3.3.3 is_left()

bool seq64::click::is_left ( ) const [inline]

13.3.3.4 is_middle()

bool seq64::click::is_middle ( ) const [inline]

13.3.3.5 is_right()
```

bool seq64::click::is\_right ( ) const [inline]

```
13.3.3.6 x()
int seq64::click::x ( ) const [inline]
13.3.3.7 y()
int seq64::click::y ( ) const [inline]
13.3.3.8 button()
int seq64::click::button ( ) const [inline]
13.3.3.9 modifier()
seq_modifier_t seq64::click::modifier ( ) const [inline]
13.3.3.10 mod_control()
bool seq64::click::mod_control ( ) const [inline]
13.3.3.11 mod_control_shift()
bool seq64::click::mod_control_shift ( ) const [inline]
13.3.3.12 mod_super()
bool seq64::click::mod_super ( ) const [inline]
13.3.4 Field Documentation
13.3.4.1 m_is_press
bool seq64::click::m_is_press [private]
13.3.4.2 m_x
int seq64::click::m_x [private]
0 is the left-most coordinate.
```

## 13.3.4.3 m\_y

```
int seq64::click::m_y [private]
```

0 is the top-most coordinate.

## 13.3.4.4 m\_button

```
int seq64::click::m_button [private]
```

Left is 1, mmiddle is 2, and right is 3. These numbers are defined via macros, and are Linux-specific and Gtk-specific.

# 13.3.4.5 m\_modifier

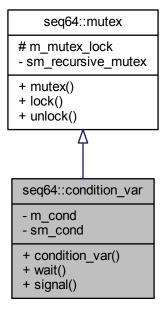

```
seq_modifier_t seq64::click::m_modifier [private]
```

Note that SEQ64\_NO\_MASK is our word for 0, meaning "no modifier".

# 13.4 seq64::condition\_var Class Reference

A mutex works best in conjunction with a condition variable.

Inheritance diagram for seq64::condition\_var:

# **Public Member Functions**

• condition\_var ()

Initialize the condition variable with the global variable.

• void wait ()

Waits for the condition variable.

• void signal ()

Signals the condition variable.

# **Private Attributes**

• pthread\_cond\_t m\_cond

Provides a class-specific condition variable.

# **Static Private Attributes**

static const pthread\_cond\_t sm\_cond
 Provides a "global" condition variable.

## **Additional Inherited Members**

# 13.4.1 Detailed Description

Therefore this class derives from the mutex class. A "has-a" relationship might be more logical than this "is-a" relationship.

## 13.4.2 Constructor & Destructor Documentation

```
13.4.2.1 condition_var()
seq64::condition_var::condition_var ( )
```

## 13.4.3 Member Function Documentation

```
13.4.3.1 wait()

void seq64::condition_var::wait ( )

13.4.3.2 signal()

void seq64::condition_var::signal ( )
```

# 13.4.4 Field Documentation

# 13.4.4.1 sm\_cond

```
const pthread_cond_t seq64::condition_var::sm_cond [static], [private]
```

Define the static condition variable used by all mutex locks.

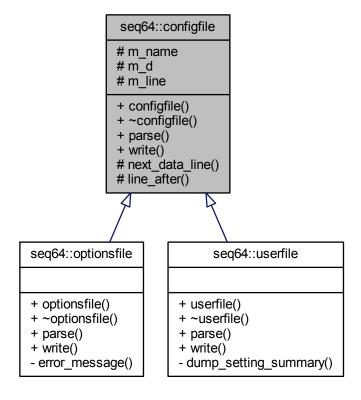

# 13.4.4.2 m\_cond

```
pthread_cond_t seq64::condition_var::m_cond [private]
```

# 13.5 seq64::configfile Class Reference

This class is the abstract base class for optionsfile and userfile.

Inheritance diagram for seq64::configfile:

## **Public Member Functions**

• configfile (const std::string &name)

Provides the string constructor for a configuration file.

virtual ∼configfile ()

A rote destructor needed for a base class.

- virtual bool parse (perform &perf)=0
- virtual bool write (const perform &perf)=0

## **Protected Member Functions**

bool next\_data\_line (std::ifstream &file)

Gets the next line of data from an input stream.

bool line\_after (std::ifstream &file, const std::string &tag)

This function gets a specific line of text, specified as a tag.

# **Protected Attributes**

· std::string m\_name

Provides the name of the configuration file.

• char \* m d

Points to an allocated buffer that holds the data for the configuration file.

char m\_line [SEQ64\_LINE\_MAX]

The current line of text being processed.

# 13.5.1 Constructor & Destructor Documentation

# 13.5.1.1 configfile()

## **Parameters**

name The name of the configuration file.

## 13.5.1.2 $\sim$ configfile()

```
\label{lem:configfile::} virtual \ seq64{::} configfile{::} \sim configfile \ (\ ) \quad [inline] \ , \ [virtual]
```

## 13.5.2 Member Function Documentation

## 13.5.2.1 next\_data\_line()

If the line starts with a number-sign, a space (!), or a null, it is skipped, to try the next line. This occurs until an EOF is encountered.

Member m\_line is a "global" return value.

## **Parameters**

file

Points to an input stream. We converted this item to a reference; pointers can be subject to problems. For example, what if someone passes a null pointer?

## Returns

Returns true if a presumed data line was found. False is returned if not found before an EOF or a section marker ("[") is found. This is a a new (ca 2016-02-14) feature of this function, to assist in adding new data to the file.

# 13.5.2.2 line\_after()

Then it gets the next non-blank line (i.e. data line) after that.

This function always starts from the beginning of the file. Therefore, it can handle reading Sequencer64 configuration files that have had their tagged sections arranged in a different order. This feature makes the configuration file a little more robust against errors.

## **Parameters**

file	Points to the input file stream.
tag	Provides a tag to be found. Lines are read until a match occurs with this tag. Normally, the tag is a
	section marker, such as "[user-interface]". Best to assume an exact match is needed.

## Returns

Returns true if the tag was found. Otherwise, false is returned.

# 13.5.2.3 parse()

Implemented in seq64::userfile, and seq64::optionsfile.

# 13.5.2.4 write()

Implemented in seq64::userfile, and seq64::optionsfile.

# 13.5.3 Field Documentation

13.5.3.1 m\_name

std::string seq64::configfile::m\_name [protected]

13.5.3.2 m\_d

char\* seq64::configfile::m\_d [protected]

13.5.3.3 m\_line

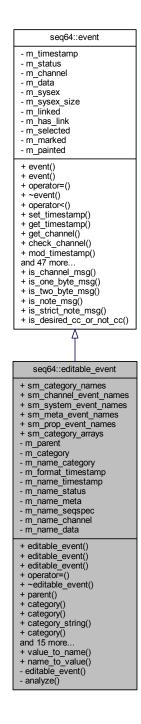

char seq64::configfile::m\_line[SEQ64\_LINE\_MAX] [protected]

This member receives an input line, and so needs to be a character buffer.

# 13.6 seq64::editable\_event Class Reference

Provides for the management of MIDI editable events.

Inheritance diagram for seq64::editable\_event:

# **Data Structures**

· struct name value t

Provides a type that contains the pair of values needed for the various lookup maps that are needed to manage editable events.

# **Public Types**

```
    enum category_t {
        category_name,
        category_channel_message,
        category_system_message,
        category_meta_event,
        category_prop_event }
```

These values determine the major kind of event, which determines what types of events are possible for this editable event object.

```
    enum timestamp_format_t {
        timestamp_measures,
        timestamp_time,
        timestamp_pulses }
```

Provides a code to indicate the desired timestamp format.

## **Public Member Functions**

· editable event (const editable events &parent)

This constructor simply initializes all of the class members.

editable\_event (const editable\_events &parent, const event &ev)

Event constructor.

• editable\_event (const editable\_event &rhs)

This copy constructor initializes most of the class members.

- editable\_event & operator= (const editable\_event &rhs)
- virtual ∼editable\_event ()

This destructor current is a rote virtual function override.

const editable\_events & parent () const

'Getter' function for member m parent

· category\_t category () const

'Getter' function for member m\_category

void category (category\_t c)

'Setter' function for member m category by value Also keeps the m name category member in synchrony.

· const std::string & category\_string () const

'Getter' function for member m\_category

void category (const std::string &cs)

'Setter' function for member m\_category by name Also keeps the m\_name\_category member in synchrony, but looks up the name, rather than using the name parameter, to avoid storing abbreviations.

• const std::string & timestamp\_string () const

'Getter' function for member m\_name\_timestamp

• midipulse timestamp () const

'Getter' function for member event::get\_timestamp() Implemented to allow a uniform naming convention that is not slavish to the get/set crowd [this ain't Java].

· void timestamp (midipulse ts)

'Setter' function for member event::set\_timestamp() Implemented to allow a uniform naming convention that is not slavish to the get/set crowd [this ain't Java].

void timestamp (const std::string &ts string)

'Setter' function for member event::set\_timestamp() [string version]

std::string time\_as\_pulses ()

Converts the current time-stamp to a string representation in units of pulses.

• std::string time as measures ()

Converts the current time-stamp to a string representation in units of measures, beats, and divisions.

std::string time\_as\_minutes ()

Converts the current time-stamp to a string representation in units of hours, minutes, seconds, and fraction.

void set\_status\_from\_string (const std::string &ts, const std::string &s, const std::string &sd0, const std::string &sd1)

Converts a string into an event status, along with timestamp and data bytes.

• std::string format\_timestamp ()

Formats the current timestamp member as a string.

• std::string stock\_event\_string ()

Converts the event into a string desribing the full event.

• std::string status\_string () const

'Getter' function for member m\_name\_status

• std::string meta\_string () const

'Getter' function for member m\_name\_meta

std::string seqspec\_string () const

'Getter' function for member m\_name\_seqspec

std::string channel\_string () const

'Getter' function for member m name channel

std::string data\_string () const

'Getter' function for member m\_name\_data

## **Static Public Member Functions**

static std::string value\_to\_name (midibyte value, category\_t cat)

Provides a static lookup function that returns the name, if any, associated with a midibyte value.

static unsigned short name\_to\_value (const std::string &name, category\_t cat)

Provides a static lookup function that returns the value, if any, associated with a name string.

# **Static Public Attributes**

static const name\_value\_t sm\_category\_names []

An array of event categories and their names.

static const name\_value\_t sm\_channel\_event\_names []

An array of MIDI channel events and their names.

static const name\_value\_t sm\_system\_event\_names []

An array of MIDI system events and their names.

static const name\_value\_t sm\_meta\_event\_names []

An array of Meta events and their names.

static const name\_value\_t sm\_prop\_event\_names[]

An array of Sequencer64-specific events and their names.

static const name\_value\_t \*const sm\_category\_arrays[]

Provides for fast access (no ifs) to the correct name array for the given category.

# **Private Member Functions**

- editable\_event ()
- void analyze ()

Analyzes an editable-event to make all the settings it needs.

## **Private Attributes**

· const editable\_events & m\_parent

Provides a reference to the container that holds this event.

category\_t m\_category

Indicates the overall category of this event, which will be category\_channel\_message, category\_system\_message, category\_meta\_event, and category\_prop\_event.

• std::string m\_name\_category

Holds the name of the event category for this event.

timestamp\_format\_t m\_format\_timestamp

Indicates the format to display the time-stamp.

std::string m name timestamp

Holds the string version of the MIDI pulses time-stamp.

std::string m name status

Holds the name of the status value for this event.

· std::string m name meta

Holds the name of the meta message, if applicable.

std::string m\_name\_seqspec

If we eventually implement the editing of the Seq24/Sequencer64 "proprietary" meta sequencer-specific events, the name of the SeqSpec will be stored here.

std::string m name channel

Holds the channel description, if applicable.

• std::string m\_name\_data

Holds the data description, if applicable.

# 13.6.1 Detailed Description

It makes the following members of an event modifiable using human-readable strings:

- m\_timestamp
- m\_status
- m\_channel
- m\_data[]

Eventually, it would be nice to be able to edit, or at least view, the SysEx events and the Meta events. Those two will require extensions to make events out of them (SysEx is partly supported).

To the concepts of event, the editable\_event class adds a category field and strings to represent all of these members.

## 13.6.2 Member Enumeration Documentation

13.6.2.1 category\_t

```
enum seq64::editable_event::category_t
```

These tags are accompanied by category names in sm\_category\_names[]. The enum values are cast to midibyte values for the purposes of using the lookup infrastructure.

## Enumerator

category_name	Indicates that the lookup needs to be done on the category names, as listed in sm_category_names[].
category_channel_message	Indicates a channel event, with a value ranging from 0x80 through 0xEF. Some examples are note on/off, control change, and program change. Values are looked up in sm_channel_event_names[].
category_system_message	Indicates a system event, with a value ranging from 0xF0 through 0xFF. Some examples are SysEx start/end, song position, and stop/start/continue/reset.  Values are looked up in sm_system_event_names[].
category_meta_event	Indicates a meta event, and there is a second value that is used to look up the name of the meta event, in sm_meta_event_names[].
category_prop_event	Indicates a "proprietary", Sequencer64 event. Indicates to look up the name of the event in sm_prop_event_names[]. Not sure if these kinds of events will be stored separately.

# 13.6.2.2 timestamp\_format\_t

```
enum seq64::editable_event::timestamp_format_t
```

Three are supported. All editable events will share the same timestamp format, but it seems good to make this a event class member, rather than something imposed from an outside static value. We shall see.

## Enumerator

timestamp_measures	This format displays the time in "measures:beats:divisions" format, where measures and beats start at 1. Thus, "1:1:0" is equivalent to 0 pulses or to "0:0:0:0.0" in normal time values.
timestamp_time	This format displays the time in "hh:mm:second.fraction" format. The value displayed should not depend upon the internal timing parameters of the event.
timestamp_pulses	This format specifies a bare pulse format for the timestamp – a long integer ranging from 0 on up. Obviously, this representation depends on the PPQN value for the sequence holding this event.

## 13.6.3 Constructor & Destructor Documentation

editable\_event::editable\_event (): event (), m\_category (category\_name), m\_name\_category (), m\_format\_
timestamp (timestamp\_measures), m\_name\_timestamp (), m\_name\_status (), m\_name\_meta (), m\_name\_
seqspec (), m\_name\_channel (), m\_name\_data () { // Empty body } Principal constructor.

## **Parameters**

parent	Provides the overall editable-events object that manages the whole set of editable-event.
10 000 0000	The state of the continue of the state of th

This function basically adds all of the extra editable\_event stuff to a standard event, so that the resulting editable ← event is container-ready.

This function is currently geared only toward support of the SMF 0 channel-splitting feature. Many of the members are not set to useful values when the MIDI file is read, so we don't handle them for now.

## Warning

This function does not yet copy the SysEx data. The inclusion of SysEx editable\_events was not complete in Seq24, and it is still not complete in Sequencer64. Nor does it currently bother with the links.

## **Parameters**

*rhs* Provides the editable\_event object to be copied.

```
13.6.3.5 \simeditable_event()
```

```
virtual seq64::editable_event::~editable_event ( ) [inline], [virtual]
```

## 13.6.4 Member Function Documentation

## 13.6.4.1 value\_to\_name()

## **Parameters**

value	The MIDI byte value to look up.
cat	The category of the MIDI byte. Each category calls a different name array into play.

## Returns

Returns the name associated with the value. If there is no such name, then an empty string is returned.

# 

editable\_event::category\_t cat ) [static]

The string\_match() function, which can match abbreviations, case-insensitively, is used to make the string comparisons.

## **Parameters**

name	The string value to look up.
cat	The category of the MIDI byte. Each category calls a different name array into play.

## Returns

Returns the value associated with the name. If there is no such value, then SEQ64\_END\_OF\_MIDIBYTE\_← TABLE is returned.

## 13.6.4.3 operator=()

Note that a bad value is translated to the value of category\_name.

## **Parameters**

c Provides the category value to set.

# 13.6.4.7 category\_string()

Note that a bad value is translated to the value of category\_name.

## **Parameters**

name Provides the category name for the category value to set.

# 13.6.4.9 timestamp\_string()

Plus, we also have to set the string version at the same time.

The format of the string representation is of the format selected by the m\_format\_timestamp member and is set by the format\_timestamp() function.

# Parameters

ts Provides the timestamp in units of MIDI pulses.

The format of the string representation is of the format selected by the m\_format\_timestamp member and is set by the format timestamp() function.

## **Parameters**

ts string	Provides the timestamp in units of MIDI pulses.	1

# 13.6.4.13 time\_as\_pulses() std::string seq64::editable\_event::time\_as\_pulses ( ) [inline] 13.6.4.14 time\_as\_measures() std::string seq64::editable\_event::time\_as\_measures ( )

Cannot be inlined because of a circular dependency between the editable\_event and editable\_events classes.

```
13.6.4.15 time_as_minutes()
std::string seq64::editable_event::time_as_minutes ( )
```

Cannot be inlined because of a circular dependency between the editable\_event and editable\_events classes.

# 13.6.4.16 set\_status\_from\_string()

Currently, this function handles only the following two messages:

- · category\_channel\_message
- · category\_system\_message

After all of the numbering member items have been set, they are converted and assigned to the string versions via a call to the analyze() function.

## **Parameters**

ts	Provides the time-stamp string of the event.
s	Provides the name of the event, such as "Program Change".
sd0	Provides the string defining the first data byte of the event.
sd1	Provides the string defining the second data byte of the event, if applicable to the event.

## 13.6.4.17 format\_timestamp()

```
std::string seq64::editable_event::format_timestamp ( )
```

The format of the string representation is of the format selected by the m\_format\_timestamp member.

# 13.6.4.18 stock\_event\_string()

```
std::string seq64::editable_event::stock_event_string ( )
```

We get the time-stamp as a string, make sure the event is fully analyzed so that all items and strings are set correctly.

## Returns

Returns a human-readable string describing this event.

# 13.6.4.19 status\_string()

```
std::string seq64::editable_event::status_string ( ) const [inline]
```

# 13.6.4.20 meta\_string()

```
std::string seq64::editable_event::meta_string ( ) const [inline]
```

# 13.6.4.21 seqspec\_string()

```
std::string seq64::editable_event::seqspec_string ( ) const [inline]
```

## 13.6.4.22 channel\_string()

```
std::string seq64::editable_event::channel_string ( ) const [inline]
```

# 13.6.4.23 data\_string()

```
std::string seq64::editable_event::data_string ( ) const [inline]
```

## 13.6.4.24 analyze()

```
void seq64::editable_event::analyze ( ) [private]
```

Used in the constructors. Some of the setters indirectly set the appropriate string representation, as well.

## Category:

```
This function can figure out if the status byte implies a channel message or a system message, and set the category string as well. However, at this time, detection of Meta events (0xFF) or Proprietary/SeqSpec events (0xFF with 0x2424) doesn't work due to lack of context here (and due to the fact that currently such events are not yet stored in a Sequencer64 sequence/track, and the least-significant-byte gets masked off anyway.)
```

## Status:

We distinguish between channel and system messages, and then one— and two-byte messages, but don't yet distinguish the data values fully.

## 13.6.5 Field Documentation

# 13.6.5.1 sm\_category\_names

```
const editable_event::name_value_t seq64::editable_event::sm_category_names [static]
```

Initializes the array of event/name pairs for the MIDI events categories.

Terminated by an empty string, the latter being the preferred test, for consistency with the other arrays and because 0 is often a legitimate code value.

# 13.6.5.2 sm\_channel\_event\_names

```
const editable_event::name_value_t seq64::editable_event::sm_channel_event_names [static]
```

Initializes the array of event/name pairs for the channel MIDI events.

We split channel and system messages into two arrays, for semantic reasons and for faster linear lookups.

Terminated by an empty string.

# 13.6.5.3 sm\_system\_event\_names

```
const editable_event::name_value_t seq64::editable_event::sm_system_event_names [static]
```

Initializes the array of event/name pairs for the system MIDI events.

We split channel and system messages into two arrays, for semantic reasons and for faster linear lookups.

Terminated by an empty string.

```
13.6.5.4 sm_meta_event_names
```

```
const editable_event::name_value_t seq64::editable_event::sm_meta_event_names [static]
```

Initializes the array of event/name pairs for all of the Meta events.

Terminated only by the empty string.

```
13.6.5.5 sm_prop_event_names
```

```
const editable_event::name_value_t seq64::editable_event::sm_prop_event_names [static]
```

Initializes the array of event/name pairs for all of the seq24/sequencer64-specific events.

Terminated only by the empty string. Note that the numbers reflect the masking off of the high-order bits by 0x242400FF.

```
13.6.5.6 sm_category_arrays
```

```
const editable_event::name_value_t *const seq64::editable_event::sm_category_arrays [static]
```

Contains pointers (references cannot be stored in an array) to the desired array for a given category.

Too bad that an array of references is not possible.

This code could be considered a bit rococo.

```
13.6.5.7 m_parent
```

```
const editable_events& seq64::editable_event::m_parent [private]
```

The container's "children" need to go to their "parent" to get certain items of information.

```
13.6.5.8 m_category
```

```
category_t seq64::editable_event::m_category [private]
```

The category\_name value is not set here, since that category is used only for looking up the human-readable form of the category.

```
13.6.5.9 m_name_category
```

```
std::string seq64::editable_event::m_name_category [private]
```

# 13.6.5.10 m\_format\_timestamp

```
timestamp_format_t seq64::editable_event::m_format_timestamp [private]
```

The default is to display in timestamp\_measures format.

## 13.6.5.11 m\_name\_timestamp

```
std::string seq64::editable_event::m_name_timestamp [private]
```

## 13.6.5.12 m\_name\_status

```
std::string seq64::editable_event::m_name_status [private]
```

It will include the names of the channel messages and the system messages. The latter includes SysEx and Meta messages.

## 13.6.5.13 m\_name\_meta

```
std::string seq64::editable_event::m_name_meta [private]
```

If not applicable, this name will be empty.

# 13.6.5.14 m\_name\_seqspec

```
std::string seq64::editable_event::m_name_seqspec [private]
```

## 13.6.5.15 m\_name\_channel

```
std::string seq64::editable_event::m_name_channel [private]
```

## 13.6.5.16 m name data

```
std::string seq64::editable_event::m_name_data [private]
```

# 13.7 seq64::editable\_events Class Reference

Provides for the management of an ordered collection MIDI editable events.

# **Public Member Functions**

editable\_events (sequence &seq, int bpm)

This constructor hooks into the sequence object.

editable\_events (const editable\_events &rhs)

This copy constructor initializes most of the class members.

editable\_events & operator= (const editable\_events &rhs)

This principal assignment operator sets most of the class members.

virtual ∼editable\_events ()

This destructor current is a rote virtual function override.

const midi\_timing & timing () const

'Getter' function for member m\_midi\_parameters

• midipulse string\_to\_pulses (const std::string &ts\_string) const

Calculates the MIDI pulses (divisions) from a string using one of the free functions of the calculations module.

• bool load events ()

Accesses the sequence's event-list, iterating through it from beginning to end, wrapping each event in the list in an editable event and inserting it into the editable-event container.

• bool save events ()

Erases the sequence's event container and recreates it using the edited container of editable events.

· Events & events ()

'Getter' function for member m\_events

· iterator begin ()

'Getter' function for member m\_events.begin(), non-constant version.

· const iterator begin () const

'Getter' function for member m\_events.begin(), constant version.

· iterator end ()

'Getter' function for member m\_events.end(), non-constant version.

· const\_iterator end () const

'Getter' function for member m\_events.end(), constant version.

int count () const

Returns the number of events stored in m events.

• bool add (const event &e)

Adds an event, converted to an editable\_event, to the internal event list.

bool add (const editable\_event &e)

Adds an editable event to the internal event list.

• bool replace (iterator ie, const editable\_event &e)

Provides a wrapper for the iterator form of erase(), which is the only one that the editable\_events container uses.

• void remove (iterator ie)

Provides a wrapper for the iterator form of erase(), which is the only one that sequence uses.

• void clear ()

Provides a wrapper for clear().

iterator current\_event () const

'Getter' function for member m\_current\_event The caller must make sure the iterator is not Events::end().

## **Static Public Member Functions**

• static editable\_event & dref (iterator ie)

Dereference access for list or map.

static const editable\_event & dref (const\_iterator ie)

Dereference const access for list or map.

# **Private Types**

- typedef event\_list::event\_key Key
  - Types to use to with the multimap implementation.
- typedef std::pair< Key, editable\_event > EventsPair
- typedef std::multimap< Key, editable\_event > Events
- typedef std::multimap< Key, editable\_event >::iterator iterator
- typedef std::multimap< Key, editable\_event >::const\_iterator const\_iterator

#### **Private Member Functions**

- editable\_events ()
- void current\_event (iterator cei)

'Setter' function for member m\_current\_event

## **Private Attributes**

· Events m events

Holds the editable\_events.

iterator m\_current\_event

Points to the current event, which is the event that has just been inserted.

• sequence & m sequence

Provides a reference to the sequence containing the events to be edited.

· midi\_timing m\_midi\_parameters

Holds the current settings for the sequence (and usually for the whole MIDI tune as well).

## **Friends**

· class eventslots

## 13.7.1 Member Typedef Documentation

```
13.7.1.1 Key
```

```
typedef event_list::event_key seq64::editable_events::Key [private]
```

These typenames are identical to those used in event\_list, but of course they are in the editable\_events scope instead. See the event\_list class.

# 13.7.1.2 EventsPair

```
typedef std::pair<Key, editable_event> seq64::editable_events::EventsPair [private]
```

### 13.7.1.3 Events

typedef std::multimap<Key, editable\_event> seq64::editable\_events::Events [private]

# 13.7.1.4 iterator

```
typedef std::multimap<Key, editable_event>::iterator seq64::editable_events::iterator [private]
```

## 13.7.1.5 const iterator

```
\label{typedef} $$td::multimap<Key, editable\_event>::const\_iterator seq64::editable\_events::const\_\leftrightarrow iterator [private]
```

## 13.7.2 Constructor & Destructor Documentation

#### **Parameters**

seq	Provides a reference to the sequence object, which provides the events and some of the MIDI timing parameters.
bpm	Provides the beats/minute value, which the caller figures out how to get and provides in this parameter.

## **13.7.2.3** editable\_events() [3/3]

int bpm )

Note that we need to reconstitute the event links here, as well.

## **Parameters**

*rhs* Provides the editable\_events object to be copied.

# 13.7.2.4 $\sim$ editable\_events()

```
\label{lem:virtual} \verb| seq64::editable_events:: \sim \verb| editable_events ( ) [inline], [virtual] |
```

## 13.7.3 Member Function Documentation

#### 13.7.3.1 operator=()

Note that we need to reconstitute the event links here, as well.

#### **Parameters**

*rhs* Provides the editable\_events object to be assigned.

#### Returns

Returns a reference to "this" object, to support the serial assignment of editable\_eventss.

## 13.7.3.2 timing()

Note that the new events will not have valid links (actually, no links). These links are used for associating Note Off events with their respective Note On events. To be consistent, we must take the time to reconstitute these links, using event\_list::verify\_and\_link().

## Returns

Returns true if the size of the final editable\_event container matches the size of the original events container.

## 13.7.3.5 save\_events()

```
bool seq64::editable_events::save_events ( )
```

bool seq64::editable\_events::load\_events ( )

Note that the old events are replaced only if the container of editable events is not empty. There are safer ways for the user to erase all the events.

Todo Consider what to do about the sequence::m is modified flag.

#### Returns

Returns true if the size of the final event container matches the size of the original editable\_events container.

```
13.7.3.6 events()
Events& seq64::editable_events::events ( ) [inline]
13.7.3.7 begin() [1/2]
iterator seq64::editable_events::begin ( ) [inline]
13.7.3.8 begin() [2/2]
const_iterator seq64::editable_events::begin ( ) const [inline]
13.7.3.9 end() [1/2]
iterator seq64::editable_events::end ( ) [inline]
13.7.3.10 end() [2/2]
const_iterator seq64::editable_events::end ( ) const [inline]
13.7.3.11 dref() [1/2]
static editable_event& seq64::editable_events::dref (
             iterator ie ) [inline], [static]
Parameters
     Provides the iterator to the event to which to get a reference.
13.7.3.12 dref() [2/2]
static const editable_event& seq64::editable_events::dref (
             const_iterator ie ) [inline], [static]
Parameters
     Provides the iterator to the event to which to get a reference.
13.7.3.13 count()
int seq64::editable_events::count ( ) const [inline]
```

We like returning an integer instead of size\_t, and rename the function so nobody is fooled.

Generated by Doxygen

e Provides the regular event to be added to the list of editable events.

## Returns

Returns true if the insertion succeeded, as evidenced by an increment in container size.

For the std::multimap implementation, This is an option if we want to make sure the insertion succeed.

```
std::pair<Events::iterator, bool> result = m_events.insert(p);
return result.second;
```

#### **Parameters**

*e* Provides the regular event to be added to the list of editable events.

# Returns

Returns true if the insertion succeeded, as evidenced by an increment in container size.

**Side-effect(s)** Sets m\_current\_event, which can be used right-away in a single-threaded context to get an iterator to the event via the current\_event() accessor.

## 13.7.3.16 replace()

void seq64::editable\_events::clear ( ) [inline]

*cei* Provide an iterator to the event to set as the current event.

## 13.7.4 Friends And Related Function Documentation

#### 13.7.4.1 eventslots

```
friend class eventslots [friend]
```

## 13.7.5 Field Documentation

## 13.7.5.1 m\_events

```
Events seq64::editable_events::m_events [private]
```

# 13.7.5.2 m\_current\_event

```
iterator seq64::editable_events::m_current_event [private]
```

(From this event we can get the current time and other parameters.) If the container were a plain map, we could instead use a key to access it. But we can at least use an iterator, rather than a bare pointer.

```
13.7.5.3 m_sequence
```

```
sequence& seq64::editable_events::m_sequence [private]
```

Besides the events, this object also holds the beats/measure, beat-width, and the PPQN value. The beats/minute have to be obtained from the application's perform object, and passed to the editable\_events constructor by the caller.

## 13.7.5.4 m\_midi\_parameters

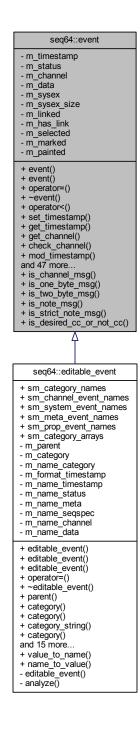

```
midi_timing seq64::editable_events::m_midi_parameters [private]
```

It holds the beats/minute, beats/measure, beat-width, and PPQN values needed to properly convert MIDI pulse timestamps to time and measure values.

# 13.8 seq64::event Class Reference

Provides events for management of MIDI events.

Inheritance diagram for seq64::event:

# **Public Types**

typedef std::vector< midibyte > SysexContainer
 Provides a type definition for a vector of midibytes.

#### **Public Member Functions**

• event ()

This constructor simply initializes all of the class members.

· event (const event &rhs)

This copy constructor initializes most of the class members.

• event & operator= (const event &rhs)

This principal assignment operator sets most of the class members.

virtual ~event ()

This destructor explicitly deletes m\_sysex and sets it to null.

bool operator< (const event &rhsevent) const</li>

If the current timestamp equal the event's timestamp, then this function returns true if the current rank is less than the event's rank.

void set timestamp (midipulse time)

'Setter' function for member m\_timestamp

• midipulse get\_timestamp () const

'Getter' function for member m timestamp

• midibyte get\_channel () const

'Getter' function for member m\_channel

· bool check\_channel (int channel) const

Checks the channel number to see if the event's channel matches it, or if the event has no channel.

void mod\_timestamp (midipulse modtick)

Calculates the value of the current timestamp modulo the given parameter.

• void set\_status (midibyte status)

Sets the m\_status member to the value of status.

• void set\_status (midibyte eventcode, midibyte channel)

This overload is useful when synthesizing events, such as converting a Note On event with a velocity of zero to a Note Off event

void set\_status\_keep\_channel (midibyte eventcode)

This function is used in recording to preserve the input channel information for deciding what to do with an incoming MIDI event.

void set\_channel (midibyte channel)

Sets the channel "nybble", without modifying the status "nybble".

midibyte get\_status () const

'Getter' function for member m\_status

bool non\_cc\_match (midibyte status)

Returns true if the event's status is not a control-change, but does match the given status.

• bool cc\_match (midibyte st, midibyte cc)

Returns true if the event's status is a control-change that matches the given status, and has a control value matching the given control-change value.

void set\_data (midibyte d1)

Clears the most-significant-bit of the d1 parameter, and sets it into the first byte of m\_data.

void set data (midibyte d1, midibyte d2)

Clears the most-significant-bit of both parameters, and sets them into the first and second bytes of m\_data.

void get\_data (midibyte &d0, midibyte &d1) const

Retrieves the two data bytes from m\_data[] and copies each into its respective parameter.

void increment\_data1 ()

Increments the first data byte (m\_data[0]) and clears the most significant bit.

void decrement data1 ()

Decrements the first data byte (m\_data[0]) and clears the most significant bit.

• void increment data2 ()

Increments the second data byte (m\_data[1]) and clears the most significant bit.

void decrement\_data2 ()

Decrements the second data byte (m\_data[1]) and clears the most significant bit.

bool append sysex (midibyte \*data, int len)

Appends SYSEX data to a new buffer.

bool append\_sysex (midibyte data)

An overload for obtaining SYSEX data byte-by-byte.

void restart\_sysex ()

Deletes and clears out the SYSEX buffer.

SysexContainer & get\_sysex ()

'Getter' function for member m\_sysex from stazed, non-const version for use by midibus.

const SysexContainer & get\_sysex () const

'Getter' function for member m\_sysex from stazed

void set\_sysex\_size (int len)

'Setter' function for member m\_sysex and m\_sysex\_size from stazed

int get\_sysex\_size () const

'Getter' function for member m\_sysex\_size

void link (event \*ev)

Sets m\_has\_link and sets m\_link to the provided event pointer.

event \* get\_linked () const

'Getter' function for member m\_linked

• bool is\_linked () const

'Getter' function for member m\_has\_link

· void clear link ()

'Setter' function for member m\_has\_link and m\_linked

void paint ()

'Setter' function for member m\_painted

• void unpaint ()

'Setter' function for member m\_painted

• bool is\_painted () const

'Getter' function for member m\_painted

• void mark ()

'Setter' function for member m\_marked

• void unmark ()

'Setter' function for member m\_marked

• bool is\_marked () const

'Getter' function for member m\_marked

• void select ()

'Setter' function for member m\_selected

· void unselect ()

'Setter' function for member m\_selected

• bool is selected () const

'Getter' function for member m\_selected

void make\_clock ()

Sets m\_status to EVENT\_MIDI\_CLOCK;.

· midibyte data (int index) const

'Getter' function for member m\_data[]

midibyte get\_note () const

Assuming m\_data[] holds a note, get the note number, which is in the first data byte, m\_data[0].

· void set note (midibyte note)

Sets the note number, clearing off the most-significant-bit and assigning it to the first data byte, m\_data[0].

• void transpose\_note (int tn)

Transpose the note, if possible.

midibyte get\_note\_velocity () const

'Getter' function for member m\_data[1], the note velocity.

· void set note velocity (int vel)

Sets the note velocity, which is held in the second data byte, and clearing off the most-significant-bit, storing it in  $m_{data}$ [1].

• bool is\_note\_on () const

Check for the Note On value in m\_status.

bool is\_note\_off () const

Check for the Note Off value in m\_status.

• bool is\_note () const

Returns true if m\_status is a Note On, Note Off, or Aftertouch message.

bool is note off recorded () const

Some keyboards send Note On with velocity 0 for Note Off, so we provide this function to test that during recording.

· void print () const

Prints out the timestamp, data size, the current status byte, any SYSEX data if present, or the two data bytes for the status byte.

int get\_rank () const

This function is used in sorting MIDI status events (e.g.

### **Static Public Member Functions**

static bool is channel msg (midibyte m)

Static test for the channel message/statuse values: Note On, Note Off, Aftertouch, Control Change, Program Change, Channel Pressure, and Pitch Wheel.

static bool is\_one\_byte\_msg (midibyte m)

Static test for channel messages that have only one data byte: Program Change and Channel Pressure.

static bool is two byte msg (midibyte m)

Static test for channel messages that have two data bytes: Note On, Note Off, Control Change, Aftertouch, and Pitch Wheel.

static bool is\_note\_msg (midibyte m)

Static test for messages that involve notes and velocity: Note On, Note Off, and Aftertouch.

static bool is\_strict\_note\_msg (midibyte m)

Static test for messages that involve notes only: Note On and Note Off.

static bool is\_desired\_cc\_or\_not\_cc (midibyte m, midibyte cc, midibyte datum)

Static test for channel messages that are either not control-change messages, or are and match the given controller value.

## **Private Attributes**

· midipulse m timestamp

Provides the MIDI timestamp in ticks, otherwise known as the "pulses" in "pulses per quarter note" (PPQN).

• midibyte m\_status

This is the status byte without the channel.

· midibyte m channel

In order to be able to handle MIDI channel-splitting of an SMF 0 file, we need to store the channel, even if we override it when playing the MIDI data.

midibyte m\_data [SEQ64\_MIDI\_DATA\_BYTE\_COUNT]

The two bytes of data for the MIDI event.

• SysexContainer m\_sysex

The data buffer for SYSEX messages.

int m\_sysex\_size

Gives the size of the SYSEX message.

• event \* m\_linked

This event is used to link Note Ons and Offs together.

· bool m has link

Indicates that a link has been made.

· bool m selected

Answers the question "is this event selected in editing.".

bool m marked

Answers the question "is this event marked in processing.".

bool m painted

Answers the question "is this event being painted.".

## 13.8.1 Detailed Description

#### A MIDI event consists of 3 bytes:

```
-# Status byte, 1sssnnn, where the sss bits specify the type of
  message, and the nnnn bits denote the channel number.
  The status byte always starts with 0.
-# The first data byte, 0xxxxxxx, where the data byte always
  start with 0, and the xxxxxxx values range from 0 to 127.
-# The second data byte, 0xxxxxxx.
```

This class may have too many member functions.

## 13.8.2 Member Typedef Documentation

#### 13.8.2.1 SysexContainer

```
typedef std::vector<midibyte> seq64::event::SysexContainer
```

## 13.8.3 Constructor & Destructor Documentation

This function is currently geared only toward support of the SMF 0 channel-splitting feature. Many of the members are not set to useful values when the MIDI file is read, so we don't handle them for now.

Note that now events are also copied when creating the editable\_events container, so this function is even more important. The event links, for linking Note Off events to their respective Note On events, are dropped. Generally, they will need to be reconstituted by calling the event\_list::verify\_and\_link() function.

# Warning

This function does not yet copy the SysEx data. The inclusion of SysEx events was not complete in Seq24, and it is still not complete in Sequencer64. Nor does it currently bother with the links, as noted above.

rhs | Provides the event object to be copied.

```
13.8.3.3 ~event()

seq64::event::~event ( ) [virtual]
```

The restart\_sysex() function does what we need. But now that m\_sysex is a vector, no action is needed.

## 13.8.4 Member Function Documentation

## 13.8.4.1 operator=()

This function is currently geared only toward support of the SMF 0 channel-splitting feature. Many of the member are not set to useful value when the MIDI file is read, so we don't handle them for now.

#### Warning

This function now copies the SysEx data, but the inclusion of SysEx events was not complete in Seq24, and it is still not complete in Sequencer64. Nor does it currently bother with the link the event might have.

# **Parameters**

rhs Provides the event object to be assigned.

## Returns

Returns a reference to "this" object, to support the serial assignment of events.

## 13.8.4.2 operator<()

Otherwise, it returns true if the current timestamp is less than the event's timestamp.

# Warning

The less-than operator is supposed to support a "strict weak ordering", and is supposed to leave equivalent values in the same order they were before the sort. However, every time we load and save our sample MIDI file, events get reversed. Here are program-changes that get reversed:

```
Save N: 0070: 6E 00 C4 48 00 C4 0C 00 C4 57 00 C4 19 00 C4 26 Save N+1: 0070: 6E 00 C4 26 00 C4 19 00 C4 57 00 C4 0C 00 C4 48
```

```
The 0070 is the offset within the versions of the b4uacuse-seq24.midi file.
```

Because of this mis-feature, and the very slow speed of loading a MIDI file when Sequencer64 is built for debugging, we are exploring using an std::mulitmap instead of an std::list. Search for occurrences of the SEQ64\_USE\_EVENT\_MAP macro. (This actually works better than a list, for loading MIDI event, we have found, but may cause the upper limit of the number of playing sequences to drop a little, due to the overhead of incrementing multimap iterators versus list iterators).

#### **Parameters**

```
rhs The object to be compared against.
```

#### Returns

Returns true if the time-stamp and "rank" are less than those of the comparison object.

# 13.8.4.3 set\_timestamp()

#### **Parameters**

time Provides the time value, in ticks, to set as the timestamp.

# 13.8.4.4 get\_timestamp()

```
midipulse seq64::event::get_timestamp ( ) const [inline]
```

## 13.8.4.5 get\_channel()

```
midibyte seq64::event::get_channel ( ) const [inline]
```

#### 13.8.4.6 check\_channel()

```
bool seq64::event::check_channel (
    int channel ) const [inline]
```

Used in the SMF 0 track-splitting code.

## **Parameters**

channel	The channel to check.

#### Returns

Returns true if the given channel matches the event's channel.

#### 13.8.4.7 is\_channel\_msg()

This function requires that the channel data have already been masked off.

#### **Parameters**

m The channel status or message byte to be tested, with the channel bits masked off.

We could add an optional boolean to cause the channel nybble to be explicitly cleared.

#### Returns

Returns true if the byte represents a MIDI channel message.

# 13.8.4.8 is\_one\_byte\_msg()

The rest of the channel messages have two data bytes. This function requires that the channel data have already been masked off.

# **Parameters**

m The channel status or message byte to be tested, with the channel bits masked off.

We could add an optional boolean to cause the channel nybble to be explicitly cleared.

### Returns

Returns true if the byte represents a MIDI channel message that has only one data byte. However, if this function returns false, it might not be a channel message at all, so be careful.

# 13.8.4.9 is\_two\_byte\_msg()

This function requires that the channel data have already been masked off.

m The channel status or message byte to be tested, with the channel bits masked off.

We could add an optional boolean to cause the channel nybble to be explicitly cleared.

#### Returns

Returns true if the byte represents a MIDI channel message that has two data bytes. However, if this function returns false, it might not be a channel message at all, so be careful.

## 13.8.4.10 is\_note\_msg()

This function requires that the channel nybble has already been masked off.

#### **Parameters**

m The channel status or message byte to be tested, with the channel bits masked off.

We could add an optional boolean to cause the channel nybble to be explicitly cleared.

#### Returns

Returns true if the byte represents a MIDI note message.

#### 13.8.4.11 is\_strict\_note\_msg()

#### **Parameters**

m The channel status or message byte to be tested, with the channel bits masked off.

#### Returns

Returns true if the byte represents a MIDI note on/off message.

## 13.8.4.12 is\_desired\_cc\_or\_not\_cc()

#### Note

The old logic was the first line, but can be simplified to the second line; the third line shows the abstract representation. Also made sure of this using a couple truth tables.

```
(m != EVENT_CONTROL_CHANGE) || (m == EVENT_CONTROL_CHANGE && d == cc)
    (m != EVENT_CONTROL_CHANGE) || (d == cc)
    a || (! a && b) => a || b

\param m
    The channel status or message byte to be tested, with the channel bits masked off.

\param cc
    The desired cc value, which the datum must match, if the message is a control-change message.

\param datum
    The current datum, to be compared to cc, if the message is a control-change message.

\return
    Returns true if the message is not a control-change, or if it is and the cc and datum parameters match.
```

## 13.8.4.13 mod\_timestamp()

## **Parameters**

modt	ick	The tick value to mod the timestamp against.
------	-----	--

## Returns

Returns a value ranging from 0 to \_mod-1.

If a\_status is a channel event, then the channel portion of the status is cleared using a bitwise AND against  $EVE \leftarrow NT\_CLEAR\_CHAN\_MASK$ .

Found in yet another fork of seq24:

```
// ORL fait de la merde
```

He also provided a very similar routine: set\_status\_midibus().

## Stazed:

The record parameter, if true, does not clear channel portion on record for channel specific recording. The channel portion is cleared in sequence::stream\_event() by calling set\_status() (a\_record = false) after the matching channel is determined. Otherwise, we use a bitwise AND to clear the channel portion of the status. All events will be stored without the channel nybble. This is necessary since the channel is appended by midibus::play() based on the track.

Instead of adding a "record" parameter to set\_status(), we provide a more specific function, set\_status\_keep\_channel(), for use in the mastermidibus class.

#### **Parameters**

# status

The status byte, perhaps read from a MIDI file or edited in the sequencer's event editor. Sometime, this byte will have the channel nybble masked off. If that is the case, the eventcode/channel overload of this function is more appropriate.

## 13.8.4.15 set\_status() [2/2]

#### **Parameters**

eventcode	The status byte, perhaps read from a MIDI file. This byte is assumed to have already had its low
	nybble cleared by masking against EVENT_CLEAR_CHAN_MASK.
channel	The channel byte. Combined with the event-code, this makes a valid MIDI "status" byte. This byte
	is assume to have already had its high nybble cleared by masking against
	EVENT_GET_CHAN_MASK.

### 13.8.4.16 set\_status\_keep\_channel()

It replaces stazed's set\_status() with the optional "record" parameter.

# **Parameters**

eventcode	The status byte, generally read from the MIDI buss.

# 13.8.4.17 set\_channel()

It actually just sets the m\_channel member. Note that the sequence channel generally overrides this value in the usage of the event.

channel The channel byte to be set.

# 13.8.4.18 get\_status()

```
midibyte seq64::event::get_status ( ) const [inline]
```

## 13.8.4.19 non\_cc\_match()

#### **Parameters**

status	The status to be checked.

## 13.8.4.20 cc\_match()

## **Parameters**

st	The status to be checked.
CC	The control-change value to be checked against the events current "d0" value.

The second byte of data is zeroed. The data bytes are in a two =-byte array member, m\_data.

## **Parameters**

d1 The byte value to set as the first data byte.

## 13.8.4.22 set\_data() [2/2]

d1	The first byte value to set.
d2	The second byte value to set.

# 13.8.4.23 get\_data()

### **Parameters**

	[out] The return reference for the first byte.
d1	[out] The return reference for the first byte.

## 13.8.4.24 increment\_data1()

int dsize )

We now use a vector instead of an array, so there is no need for reallocation and copying of the current SYSEX data. The data represented by data and dsize is appended to that data buffer.

# **Parameters**

data	Provides the additional SYSEX data. If not provided, nothing is done, and false is returned.
_dsize	Provides the size of the additional SYSEX data. If not provided, nothing is done.

#### Returns

Returns false if there was an EVENT\_MIDI\_SYSEX\_END byte in the appended data, or if an error occurred, and the caller needs to stop trying to process the data. We're not quite sure what to do with any extra data remains.

#### **Parameters**

data A single MIDI byte of data, assumed to be part of a SYSEX message event.

```
13.8.4.30 restart_sysex()
void seq64::event::restart_sysex ( )
(The m_sysex member used to be a pointer.)
13.8.4.31 get_sysex() [1/2]
SysexContainer& seq64::event::get_sysex ( ) [inline]
13.8.4.32 get_sysex() [2/2]
const SysexContainer& seq64::event::get_sysex ( ) const [inline]
13.8.4.33 set_sysex_size()
void seq64::event::set_sysex_size (
             int len ) [inline]
13.8.4.34 get_sysex_size()
int seq64::event::get_sysex_size ( ) const [inline]
13.8.4.35 link()
void seq64::event::link (
             event * ev ) [inline]
```

ev

Provides a pointer to the event value to set. If null, then m\_has\_link is set to false, to guarantee that is\_linked() is correct.

```
13.8.4.36 get_linked()
event* seq64::event::get_linked ( ) const [inline]
13.8.4.37 is_linked()
bool seq64::event::is_linked ( ) const [inline]
13.8.4.38 clear_link()
void seq64::event::clear_link ( ) [inline]
13.8.4.39 paint()
void seq64::event::paint ( ) [inline]
13.8.4.40 unpaint()
void seq64::event::unpaint ( ) [inline]
13.8.4.41 is_painted()
bool seq64::event::is_painted ( ) const [inline]
13.8.4.42 mark()
void seq64::event::mark ( ) [inline]
13.8.4.43 unmark()
void seq64::event::unmark ( ) [inline]
13.8.4.44 is_marked()
```

bool seq64::event::is\_marked ( ) const [inline]

```
13.8.4.45 select()
void seq64::event::select ( ) [inline]
13.8.4.46 unselect()
void seq64::event::unselect ( ) [inline]
13.8.4.47 is_selected()
bool seq64::event::is_selected ( ) const [inline]
13.8.4.48 make_clock()
void seq64::event::make_clock ( ) [inline]
13.8.4.49 data()
midibyte seq64::event::data (
             int index ) const [inline]
13.8.4.50 get_note()
midibyte seq64::event::get_note ( ) const [inline]
13.8.4.51 set_note()
void seq64::event::set_note (
             midibyte note ) [inline]
Parameters
 note
       Provides the note value to set.
13.8.4.52 transpose_note()
void seq64::event::transpose_note (
             int tn )
```

*tn* The amount (positive or negative) to transpose a note. If the result is out of range, the transposition is not performed.

vel Provides the velocity value to set.

```
13.8.4.55 is_note_on()
bool seq64::event::is_note_on ( ) const [inline]
```

Currently assumes that the channel nybble has already been stripped.

## Returns

Returns true if m\_status is EVENT\_NOTE\_ON.

```
13.8.4.56 is_note_off()
bool seq64::event::is_note_off ( ) const [inline]
```

Currently assumes that the channel nybble has already been stripped.

#### Returns

Returns true if m status is EVENT NOTE OFF.

```
13.8.4.57 is_note()
bool seq64::event::is_note ( ) const [inline]
```

All of these are notes, associated with a MIDI key value. Uses the static function is note\_msg().

## Returns

The return value of is\_note\_msg() is returned.

## 13.8.4.58 is\_note\_off\_recorded()

```
bool seq64::event::is_note_off_recorded ( ) const [inline]
```

The channel nybble is masked off before the test.

#### Returns

Returns true if the event is a Note On event with velocity of 0.

### 13.8.4.59 print()

```
void seq64::event::print ( ) const

13.8.4.60 get_rank()
```

```
int seq64::event::get_rank ( ) const
```

The ranking, from high to low, is note off, note on, aftertouch, channel pressure, and pitch wheel, control change, and program changes.

note on/off, aftertouch, control change, etc.) The sort order is not determined by the actual status values.

The lower the ranking the more upfront an item comes in the sort order.

## Returns

Returns the rank of the current m status byte.

## 13.8.5 Field Documentation

# 13.8.5.1 m\_timestamp

```
midipulse seq64::event::m_timestamp [private]
```

## 13.8.5.2 m\_status

```
midibyte seq64::event::m_status [private]
```

The channel is included when recording MIDI, but, once a sequence with a matching channel is found, the channel nybble is cleared for storage. The channel will be added back on the MIDI bus upon playback. The high nibble = type of event; The low nibble = channel. Bit 7 is present in all status bytes.

## 13.8.5.3 m\_channel

```
midibyte seq64::event::m_channel [private]
```

This member adds another 4 bytes to the event object, most likely.

```
156
13.8.5.4 m_data
midibyte seq64::event::m_data[SEQ64_MIDI_DATA_BYTE_COUNT] [private]
Remember that the most-significant bit of a data byte is always 0. A one-byte message uses only the 0th index.
13.8.5.5 m_sysex
SysexContainer seq64::event::m_sysex [private]
Adapted from Stazed's Seq32 project on GitHub.
13.8.5.6 m_sysex_size
int seq64::event::m_sysex_size [private]
Perhaps redundant.
13.8.5.7 m_linked
event* seq64::event::m_linked [private]
13.8.5.8 m_has_link
bool seq64::event::m_has_link [private]
This item is used [via the get_link() and link() accessors] in the sequence class.
13.8.5.9 m_selected
bool seq64::event::m_selected [private]
```

# 13.8.5.10 m\_marked

```
bool seq64::event::m_marked [private]
```

# 13.8.5.11 m\_painted

bool seq64::event::m\_painted [private]

# seq64::event\_list::event\_key Class Reference

Provides a key value for an event map.

## **Public Member Functions**

• event\_key (midipulse tstamp, int rank)

Principal event key constructor.

event\_key (const event &e)

Event-based constructor.

• bool operator< (const event\_key &rhs) const

Provides the minimal operator needed to sort events using an event\_key.

# **Private Attributes**

• midipulse m\_timestamp

The primary key-value for the key.

• int m\_rank

The sub-key-value for the key.

# 13.9.1 Detailed Description

Its types match the m\_timestamp and get\_rank() function of this event class.

## 13.9.2 Constructor & Destructor Documentation

## **Parameters**

tstamp	The time-stamp is the primary part of the key. It is the most important key item.
rank	Rank is an arbitrary number used to prioritize events that have the same time-stamp. See the
	event::get_rank() function for more information.

```
13.9.2.2 event_key() [2/2]
seq64::event_list::event_key::event_key (
```

const event & rhs )

This constructor makes it even easier to create an event\_key. Note that the call to event::get\_rank() makes a simple calculation based on the status of the event.

#### **Parameters**

rhs	Provides the event key to be copied.
-----	--------------------------------------

# 13.9.3 Member Function Documentation

## 13.9.3.1 operator<()

#### **Parameters**

*rhs* Provides the event key to be compared against.

#### Returns

Returns true if the rank and timestamp of the current object are less than those of rhs.

# 13.9.4 Field Documentation

## 13.9.4.1 m\_timestamp

```
midipulse seq64::event_list::event_key::m_timestamp [private]

13.9.4.2 m_rank

int seq64::event_list::event_key::m_rank [private]
```

# 13.10 seq64::event\_list Class Reference

The event\_list class is a receptable for MIDI events.

## **Data Structures**

· class event\_key

Provides a key value for an event map.

# **Public Member Functions**

event\_list ()

Principal constructor.

event\_list (const event\_list &a\_rhs)

Copy constructor.

event\_list & operator= (const event\_list &a\_rhs)

Principal assignment operator.

∼event list ()

A rote destructor.

• iterator begin ()

'Getter' function for member m\_events.begin(), non-constant version.

· const\_iterator begin () const

'Getter' function for member m\_events.begin(), constant version.

· iterator end ()

'Getter' function for member m\_events.end(), non-constant version.

· const\_iterator end () const

'Getter' function for member m\_events.end(), constant version.

· int count () const

Returns the number of events stored in m\_events.

• bool empty () const

Returns true if there are no events.

bool add (const event &e)

Adds an event to the internal event list in an optionally sorted manner.

· bool append (const event &e)

Adds an event to the internal event list without sorting.

void push\_back (const event &)

The multimap version of this function does nothing.

• bool is modified () const

'Getter' function for member m is modified

• void unmodify ()

'Setter' function for member m is modified This function may be needed by some of the sequence editors.

• void remove (iterator ie)

Provides a wrapper for the iterator form of erase(), which is the only one that sequence uses.

• void clear ()

Provides a wrapper for clear().

• void merge (event\_list &el, bool presort=true)

Provides a merge operation for the event multimap analogous to the merge operation for the event list.

• void sort ()

TEMPORARILY HERE for gdb.

# **Static Public Member Functions**

· static event & dref (iterator ie)

Dereference access for list or map.

• static const event & dref (const\_iterator ie)

Dereference const access for list or map.

# **Private Types**

typedef std::multimap< event\_key, event > Events

Types to use to swap between list and multimap implementations.

- typedef std::pair< event\_key, event > EventsPair
- typedef std::multimap< event\_key, event >::iterator iterator
- typedef std::multimap< event\_key, event >::const\_iterator const\_iterator

## **Private Member Functions**

void link\_new ()

Links a new event.

void clear\_links ()

Clears all event links and unmarks them all.

void verify\_and\_link (midipulse slength)

This function verifies state: all note-ons have an off, and it links note-offs with their note-ons.

bool mark\_selected ()

Marks all selected events.

· void mark\_out\_of\_range (midipulse slength)

Marks all events that have a time-stamp that is out of range.

• void mark\_all ()

Marks all events.

void unmark\_all ()

Unmarks all events.

bool remove\_marked ()

Removes marked events.

void unpaint\_all ()

Unpaints all list-events.

• int count\_selected\_notes () const

Counts the selected note-on events in the event list.

• bool any\_selected\_notes () const

Indicates that at least one note is selected.

• int count\_selected\_events (midibyte status, midibyte cc) const

Counts the selected events, with the given status, in the event list.

• void select\_all ()

Selects all events, unconditionally.

void unselect\_all ()

Deselects all events, unconditionally.

void print () const

Prints a list of the currently-held events.

· const Events & events () const

'Getter' function for member m\_events

## **Private Attributes**

Events m\_events

This list holds the current pattern/sequence events.

· bool m\_is\_modified

A new flag to indicate if an event was added or removed.

# **Friends**

- · class editable\_events
- class midifile
- · class midi\_container
- · class midi\_splitter
- · class sequence

## 13.10.1 Detailed Description

Two implementations, an std::multimap, and the original, an std::list, are provided for comparison, and are selected at build time, by manually defining the SEQ64\_USE\_EVENT\_MAP macro near the top of this module.

# 13.10.2 Member Typedef Documentation

```
13.10.2.1 Events
typedef std::multimap<event_key, event> seq64::event_list::Events [private]
13.10.2.2 EventsPair
typedef std::pair<event_key, event> seq64::event_list::EventsPair [private]
13.10.2.3 iterator
typedef std::multimap<event_key, event>::iterator seq64::event_list::iterator [private]
13.10.2.4 const_iterator
typedef std::multimap<event_key, event>::const_iterator seq64::event_list::const_iterator
[private]
13.10.3 Constructor & Destructor Documentation
13.10.3.1 event_list() [1/2]
seq64::event_list::event_list ( )
13.10.3.2 event_list() [2/2]
seq64::event_list::event_list (
             const event_list & rhs )
Parameters
      Provides the event list to be copied.
13.10.3.3 ∼event_list()
```

seq64::event\_list::~event\_list ( )

# 13.10.4 Member Function Documentation

Follows the stock rules for such an operator, just assigning member values.

## **Parameters**

*rhs* Provides the event list to be assigned.

```
13.10.4.2 begin() [1/2]
iterator seq64::event_list::begin ( ) [inline]
13.10.4.3 begin() [2/2]
const_iterator seq64::event_list::begin ( ) const [inline]
13.10.4.4 end() [1/2]
iterator seq64::event_list::end ( ) [inline]
13.10.4.5 end() [2/2]
const_iterator seq64::event_list::end ( ) const [inline]
13.10.4.6 count()
int seq64::event_list::count ( ) const [inline]
We like returning an integer instead of size_t, and rename the function so nobody is fooled.
13.10.4.7 empty()
bool seq64::event_list::empty ( ) const [inline]
return m_events.size() == 0;
13.10.4.8 add()
bool seq64::event_list::add (
```

const event & e ) [inline]

*e* | Provides the event to be added to the list.

## Returns

Returns true. We assume the insertion succeeded, and no longer care about an increment in container size. It's a multimap, so it always inserts, and if we don't have memory left, all bets are off anyway.

### 13.10.4.9 append()

It is a wrapper, wrapper for insert() or push\_front(), with an option to call sort().

The add() function without sorting, useful to speed up the initial container loading into the event-list.

For the std::multimap implementation, This is an option if we want to make sure the insertion succeed.

If the std::list implementation has been built in, then the event list is sorted after the addition. This is a time-consuming operation.

# Warning

This pushing (and, in writing the MIDI file, the popping), causes events with identical timestamps to be written in reverse order. Doesn't affect functionality, but it's puzzling until one understands what is happening. That's why we're now preferring to use a multimap as the container.

#### **Parameters**

*e* Provides the event to be added to the list.

## Returns

Returns true. We assume the insertion succeeded, and no longer care about an increment in container size. It's a multimap, so it always inserts, and if we don't have memory left, all bets are off anyway.

## 13.10.4.10 push\_back()

## 13.10.4.11 is\_modified()

```
bool seq64::event_list::is_modified ( ) const [inline]
```

```
13.10.4.12 unmodify()

void seq64::event_list::unmodify ( ) [inline]

But use it with great caution.

13.10.4.13 remove()

void seq64::event_list::remove (
```

Currently, no check on removal is performed. Sets the modified-flag.

#### **Parameters**

*ie* Provides the iterator to the event to be removed.

iterator ie ) [inline]

bool presort = true )

We have certain constraints to preserve, as the following discussion shows.

For std::list, sequence merges list T into list A by first calling T.sort(), and then A.merge(T). The merge() operation merges T into A by transferring all of its elements, at their respective ordered positions, into A. Both containers must already be ordered.

The merge effectively removes all the elements in T (which becomes empty), and inserts them into their ordered position within container (which expands in size by the number of elements transferred). The operation is performed without constructing nor destroying any element, whether T is an Ivalue or an rvalue, or whether the value-type supports move-construction or not.

Each element of T is inserted at the position that corresponds to its value according to the strict weak ordering defined by operator <. The resulting order of equivalent elements is stable (i.e. equivalent elements preserve the relative order they had before the call, and existing elements precede those equivalent inserted from x). The function does nothing if (&x == this).

For std::multimap, sorting is automatic. However, unless move-construction is supported, merging will be less efficient than for the list version. Also, we need a way to include duplicates of each event, so we need to use a multimap. Once all this setup, merging is really just insertion. And, since sorting isn't needed, the multimap actually turns out to be faster.

### **Parameters**

el	Provides the event list to be merged into the current event list.		
presort	If true, the events are presorted. This is a requirement for merging an std::list, but is a no-op for the		
	std::multimap implementation.		

# 13.10.4.16 sort()

# **Parameters**

*ie* Provides the iterator to the event to which to get a reference.

# Parameters

*ie* Provides the iterator to the event to which to get a reference.

# 13.10.4.19 link\_new()

```
void seq64::event_list::link_new ( ) [private]
```

This function checks for a note on, then look for its note off. This function is provided in the event\_list because it does not depend on any external data. Also note that any desired thread-safety must be provided by the caller.

# 13.10.4.20 clear\_links()

```
void seq64::event_list::clear_links ( ) [private]
```

# 13.10.4.21 verify\_and\_link()

# Stazed (seq32):

```
This function now deletes any notes that are \geq m_length, so any resize or move of notes must modify for wrapping if Note Off is \geq m_length.
```

Not threadsafe As in most case, the caller will use an automutex to call this function safely.

#### **Parameters**

vides the length beyond which events wi	will be pruned.
---	-----------------

# 13.10.4.22 mark\_selected()

```
bool seq64::event_list::mark_selected ( ) [private]
```

### Returns

Returns true if there was even one event selected and marked.

# 13.10.4.23 mark\_out\_of\_range()

Used for killing (pruning) those events not in range. If the current time-stamp is greater than the length, then the event is marked for pruning.

# Note

This code was comparing the timestamp as greater than or equal to the sequence length. However, being equal is fine. This may explain why the midifile code would add one tick to the length of the last note when processing the end-of-track.

### **Parameters**

	slength	Provides the length beyond which events will be pruned.
--	---------	---

# 13.10.4.24 mark\_all()

```
void seq64::event_list::mark_all ( ) [private]
```

Not yet used, but might come in handy with the event editor dialog.

# 13.10.4.25 unmark\_all()

```
void seq64::event_list::unmark_all ( ) [private]
```

# 13.10.4.26 remove\_marked()

```
bool seq64::event_list::remove_marked ( ) [private]
```

Note how this function handles removing a value to avoid incrementing a now-invalid iterator.

Threadsafe

### Returns

Returns true if at least one event was removed.

# 13.10.4.27 unpaint\_all()

```
void seq64::event_list::unpaint_all ( ) [private]
```

# 13.10.4.28 count\_selected\_notes()

```
int seq64::event_list::count_selected_notes ( ) const [private]
```

### 13.10.4.29 any\_selected\_notes()

```
bool seq64::event_list::any_selected_notes ( ) const [private]
```

Acts like event\_list::count\_selected\_notes(), but stops after finding a selected note. We could add a flag to count
\_\_selected\_notes() to break, I suppose.

# Returns

Returns true if at least one note is selected.

### 13.10.4.30 count\_selected\_events()

If the event is a control change (CC), then it must also match the given CC value.

# **Parameters**

status	The desired status value to count.	
cc The desired control-change to count. Used only if the status parameter indicates a control-change ever		

# Returns

Returns the number of selected events.

```
13.10.4.31 select_all()
void seq64::event_list::select_all ( ) [private]
13.10.4.32 unselect_all()
void seq64::event_list::unselect_all ( ) [private]
13.10.4.33 print()
void seq64::event_list::print ( ) const [private]
13.10.4.34 events()
const Events& seq64::event_list::events ( ) const [inline], [private]

# 13.10.6 Field Documentation

13.10.6.1 m\_events

Events seq64::event\_list::m\_events [private]

13.10.6.2 m\_is\_modified

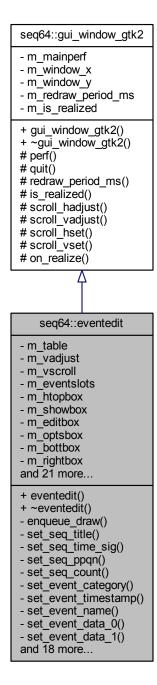

bool seq64::event\_list::m\_is\_modified [private]

We may need to give client code a way to reload the sequence. This is currently an issue when a seqroll and an eventedit/eventslots are active for the same sequence.

# 13.11 seq64::eventedit Class Reference

This class supports an Event Editor that is used to tweak the details of events and get a better idea of the mix of events in a sequence.

Inheritance diagram for seq64::eventedit:

# **Public Member Functions**

• eventedit (perform &p, sequence &seq)

Principal constructor, has a reference to a perform object.

virtual ∼eventedit ()

This rote constructor does nothing.

### **Private Member Functions**

void enqueue\_draw ()

Helper wrapper for calling eventslots::queue\_draw().

void set\_seq\_title (const std::string &title)

Sets m\_label\_seq\_name to the title.

void set\_seq\_time\_sig (const std::string &sig)

Sets m\_label\_time\_sig to the time-signature string.

• void set\_seq\_ppqn (const std::string &p)

Sets m\_label\_ppqn to the parts-per-quarter-note string.

void set\_seq\_count ()

Sets m\_label\_ev\_count to the number-of-events string.

void set\_event\_category (const std::string &c)

Sets m\_label\_category to the category string.

void set\_event\_timestamp (const std::string &ts)

Sets m entry ev timestamp to the time-stamp string.

void set\_event\_name (const std::string &n)

Sets m\_entry\_ev\_name to the name-of-event string.

void set\_event\_data\_0 (const std::string &d)

Sets m\_entry\_ev\_data\_0 to the first data byte string.

void set\_event\_data\_1 (const std::string &d)

Sets m\_entry\_data\_1 to the second data byte string.

void perf modify ()

Provides a way to mark the perform object as modified, when the modified sequence is saved.

• void set\_dirty (bool flag=true)

Sets the "modified" status of the user-interface.

void v adjustment (int value)

Sets the parameters for the vertical scroll-bar, using only the value parameter.

void v\_adjustment (int value, int lower, int upper)

Sets the parameters for the vertical scroll-bar that is associated with the eventslots event-list user-interface.

void change focus (bool set it=true)

Changes what perform and mainwid see as the "current sequence".

void close\_out ()

Handles closing the sequence editor, common code for handle\_cancel() and handle\_close().

• void handle close ()

Handles closing the sequence editor.

void handle\_delete ()

Initiates the deletion of the current editable event.

void handle\_insert ()

Initiates the insertion of a new editable event.

· void handle modify ()

Passes the edited fields to the current editable event in the eventslot.

void handle\_save ()

Handles saving the edited data back to the original sequence.

• void handle cancel ()

Cancels the edits and closes the dialog box.

void on\_realize ()

This callback function calls the base-class on\_realize() function.

void on set focus (Widget \*focus)

On receiving focus, attempt to tell mainwid that this sequence is now the current sequence.

• bool on\_focus\_in\_event (GdkEventFocus \*)

Implements the on-focus event handling.

bool on\_focus\_out\_event (GdkEventFocus \*)

Implements the on-unfocus event handling.

• bool on\_key\_press\_event (GdkEventKey \*ev)

This function is the callback for a key-press event.

bool on\_delete\_event (GdkEventAny \*event)

Handles an on-delete event.

# **Private Attributes**

• Gtk::Table \* m table

A whole horde of GUI elements.

Gtk::Adjustment \* m\_vadjust

Vertical paging for event list.

• Gtk::VScrollbar \* m\_vscroll

Vertical scroll for event list.

• eventslots \* m eventslots

Drawing area for events.

• Gtk::HBox \* m htopbox

\_ ...

Padding at the top of the dialog.

• Gtk::VBox \* m\_showbox

Area for sequence information.

• Gtk::VBox \* m\_editbox

Text-edits and buttons for data.

• Gtk::VBox \* m\_optsbox

Reserved for future options.

• Gtk::HBox \* m\_bottbox

Holds the Save and Close buttons.

• Gtk::VBox \* m\_rightbox

Used for padding on right side.

• Gtk::Button \* m\_button\_del

"Delete Current Event (\*)" button.

• Gtk::Button \* m\_button\_ins

"Insert New Event" button.

• Gtk::Button \* m\_button\_modify

"Modify New Event" button.

• Gtk::Button \* m\_button\_save

"Save to Sequence" button.

• Gtk::Button \* m\_button\_cancel

"Close" button.

• Gtk::Label \* m\_label\_seq\_name

Items for the inside of the m\_showbox member.

• Gtk::Label \* m\_label\_time\_sig

Shows time signature for pattern.

• Gtk::Label \* m\_label\_ppqn

Shows the parts per quarter note.

Gtk::Label \* m label channel

Shows channel number of pattern.

• Gtk::Label \* m label ev count

Shows the count of pattern events.

```
    Gtk::Label * m_label_spacer
    Spacer for the showbox elements.
    Gtk::Label * m_label_modified
```

Shows "[Modified]" if edited.

Gtk::Label \* m\_label\_category

Items for the inside of the m\_editbox member.

• Gtk::Entry \* m\_entry\_ev\_timestamp

Text edit for event time-stamp.

• Gtk::Entry \* m\_entry\_ev\_name

Text edit for MIDI event name.

• Gtk::Entry \* m\_entry\_ev\_data\_0

Text edit for first event datum.

• Gtk::Entry \* m\_entry\_ev\_data\_1

Text edit for second event datum.

• Gtk::Label \* m\_label\_time\_fmt

Optsbox item, only "Sequencer64".

• Gtk::Label \* m\_label\_right

Padding at the right of dialog.

sequence & m\_seq

A reference to the sequence being edited, to control its editing flag.

bool m\_have\_focus

Indicates that the focus has already been changed to this sequence.

# **Parameters**

p	Refers to the main performance object.	
seq	Refers to the sequence holding the event data to be edited.	

The sequedit class indirectly sets the sequence dirty flags, and this allows the sequence's pattern slot to be updated, which, for example, allows the new experimental in-edit-highlight feature to work. To get the eventedit to also show the in-edit highlighting, we can make the sequence::set\_dirty\_mp() call. This call does not cause a prompt for saving the file when exiting.

```
13.11.1.2 ~eventedit()
seq64::eventedit::~eventedit ( ) [virtual]
```

We're going to have to run the application through valgrind to make sure that nothing is left behind.

# 13.11.2 Member Function Documentation

```
13.11.2.1 enqueue_draw()
void seq64::eventedit::enqueue_draw ( ) [private]
13.11.2.2 set_seq_title()
void seq64::eventedit::set_seq_title (
             const std::string & title ) [private]
Parameters
 title
       The name of the sequence.
13.11.2.3 set_seq_time_sig()
void seq64::eventedit::set_seq_time_sig (
             const std::string & sig ) [private]
Parameters
      The time signature of the sequence.
13.11.2.4 set_seq_ppqn()
void seq64::eventedit::set_seq_ppqn (
             const std::string & p ) [private]
Parameters
     The parts-per-quarter-note string for the sequence.
13.11.2.5 set_seq_count()
void seq64::eventedit::set_seq_count ( ) [private]
13.11.2.6 set_event_category()
```

void seq64::eventedit::set\_event\_category (

const std::string & c ) [private]

### **Parameters**

*c* The category string for the current event.

# 13.11.2.7 set\_event\_timestamp()

# **Parameters**

*ts* The time-stamp string for the current event.

# 13.11.2.8 set\_event\_name()

### **Parameters**

n The name-of-event string for the current event.

# 13.11.2.9 set\_event\_data\_0()

# Parameters

d The first data byte string for the current event.

# 13.11.2.10 set\_event\_data\_1()

# **Parameters**

d The second data byte string for the current event.

# 13.11.2.11 perf\_modify()

```
void seq64::eventedit::perf_modify ( ) [private]
```

# 13.11.2.12 set\_dirty()

```
void seq64::eventedit::set_dirty (
          bool flag = true ) [private]
```

This includes changing a label and enabling/disabling the Save button.

# **Parameters**

flag If true, the modified status is indicated, otherwise it is cleared.

This function overload provides a common use case.

### **Parameters**

value The new current value to be indicated by the scroll-bar.

# 13.11.2.14 v\_adjustment() [2/2]

It keeps the frame scroll-bar in sync with the frame movement actions. Some of the parameters are obtained from the eventslots object:

```
Page size comes from eventslots::line_maximum().Page increment is a little less than the page-size value.
```

### **Parameters**

value	The current value to be indicated by the scroll-bar. It will lie between the lower and upper parameter.	
lower	The lowest value to be indicated by the scroll-bar.	
upper	upper The highest value to be indicated by the scroll-bar.	

# 13.11.2.15 change\_focus()

Similar to the same function in sequedit.

### **Parameters**

set⊷	If true (the default value), indicates we want focus, otherwise we want to give up focus.
_it	

```
13.11.2.16 close_out()

void seq64::eventedit::close_out ( ) [private]

13.11.2.17 handle_close()

void seq64::eventedit::handle_close ( ) [private]

Simply calls close_out().

13.11.2.18 handle_delete()

void seq64::eventedit::handle_delete ( ) [private]

13.11.2.19 handle_insert()

void seq64::eventedit::handle_insert ( ) [private]
```

The event's location will be determined by the timestamp and existing events. Note that we have to recalibrate the scroll-bar when we insert/delete events by calling v\_adjustment().

```
13.11.2.20 handle_modify()

void seq64::eventedit::handle_modify ( ) [private]
```

Note that there are two cases to worry about. If the timestamp has not changed, then we can simply modify the existing current event in place. Otherwise, we need to delete the old event and insert the new one. But that is done for us by eventslots::modify\_current\_event().

```
13.11.2.21 handle_save()
void seq64::eventedit::handle_save ( ) [private]
```

The event list in the original sequence is cleared, and the editable events are converted to plain events, and added to the container, one by one.

Todo Could also support writing the events to a new sequence, for added flexibility.

# 13.11.2.22 handle\_cancel()

```
void seq64::eventedit::handle_cancel ( ) [private]
```

In order for removing the current-highlighting in the mainwd or perfedit windows, some of the work of handle\_close() needs to be done here as well.

```
13.11.2.23 on_realize()
```

```
void seq64::eventedit::on_realize ( ) [private]
```

Then it sets the vertical adjustment to account for the number of events in the eventslot.

### 13.11.2.24 on\_set\_focus()

Only works in certain circumstances.

#### **Parameters**

focus | The widget that has the focus. Merely passed on to gui\_window\_gtk2's version of this function.

# 13.11.2.25 on\_focus\_in\_event()

It sets the focus flag and calls change\_focus().

# 13.11.2.26 on\_focus\_out\_event()

It resets the focus flag and calls change\_focus().

# 13.11.2.27 on\_key\_press\_event()

If the Up or Down arrow is pressed (later, k and j :-), then we tell the eventslots object to move the "current event" highlighting up or down. In Gtkmm, these arrows also cause movement from one edit field to the next, so we disable that process if the event was handled here.

Note that the Delete key is needed for the edit fields. For now, we replace it with the asterisk, which is easy to access from the numeric pad of a keyboard, and allows for rapid deletion. The Insert key also causes confusing effects in the edit fields, so we replaced it by the slash, but that didn't work. Note that the asterisk and slash should not be required in any of the edit fields. HOWEVER, "/" still gets passed the edit fields (!), so you'll just have to click the button to insert an event. Let's try the backslash! No go there, either.

### **Parameters**

```
ev The key event to process.
```

# Returns

Returns true if the event got handled somewhere along the line.

# 13.11.2.28 on\_delete\_event()

It sets the sequence object's editing flag to false, and deletes "this". This function is called if the "Close" ("X") button in the window's title bar is clicked. That is a different action from clicking the Close button.

### Returns

Always returns false.

# 13.11.3 Friends And Related Function Documentation

13.11.4.30 m_seq
sequence& seq64::eventedit::m_seq [private]
13.11.4.31 m_have_focus
bool seq64::eventedit::m_have_focus [private]
```

This item is to modify the mainwid and perfedit "edit-sequence" value in order to highlight pattern slot of the pattern/event editor that currently has the user-input focus.

# 13.12 seq64::eventslots Class Reference

This class implements the left-side list of events in the pattern event-edit window.

Inheritance diagram for seq64::eventslots:

# **Public Member Functions**

• eventslots (perform &p, eventedit &parent, sequence &seq, Gtk::Adjustment &vadjust)

Principal constructor for this user-interface object.

virtual ∼eventslots ()

Let's provide a do-nothing virtual destructor.

• int event count () const

'Getter' function for member m\_event\_count Returns the number of total events in the sequence represented by the eventslots object.

• int line\_count () const

'Getter' function for member m\_line\_count Returns the current number of rows (events) in the eventslots's display.

int line maximum () const

'Getter' function for member m\_line\_maximum Returns the maximum number of rows (events) in the eventslots's display.

int line\_increment () const

Provides the "page increment" or "line increment" of the frame, This value is the current line-maximum of the frame minus its overlap value.

• int top\_index () const

'Getter' function for member m\_top\_index

• int current\_index () const

'Getter' function for member m\_current\_index

int pager\_index () const

'Getter' function for member m\_pager\_index

### **Private Member Functions**

· bool load\_events ()

Grabs the event list from the sequence and uses it to fill the editable-event list.

• void set\_current\_event (const editable\_events::iterator ei, int index, bool full\_redraw=true)

Set the current event, which is the event that is highlighted.

bool insert\_event (const editable\_event &edev)

Inserts an event.

• bool insert\_event (const std::string &evtimestamp, const std::string &evname, const std::string &evdata0, const std::string &evdata1)

Inserts an event based on the setting provided, which the eventedit object gets from its Entry fields.

• bool delete\_current\_event ()

Deletes the current event, and makes adjustments due to that deletion.

bool modify\_current\_event (const std::string &evtimestamp, const std::string &evname, const std::string &evdata0, const std::string &evdata1)

Modifies the data in the currently-selected event.

• bool save events ()

Writes the events back to the sequence.

void select\_event (int event\_index=SEQ64\_NULL\_EVENT\_INDEX, bool full\_redraw=true)

Selects and highlights the event that is located in the frame at the given event index.

 void set\_text (const std::string &evcategory, const std::string &evtimestamp, const std::string &evname, const std::string &evdata0, const std::string &evdata1)

Sets the text in the parent dialog, eventedit.

• void enqueue draw ()

Wraps queue\_draw().

int convert\_y (int y)

Converts a y-value into an event index relative to 0 (the top of the eventslots window/pixmap) and returns it.

void draw event (editable events::iterator ei, int index)

Draw the given slot/event.

void draw\_events ()

Draws all of the events in the current eventslots frame.

· void change\_vert ()

Change the vertical offset of events.

void page\_movement (int new\_value)

Adjusts the vertical position of the frame according to the given new scrollbar/vadjust value.

void page topper (editable events::iterator newcurrent)

Adjusts the vertical position of the frame according to the given new bottom iterator.

• int decrement top ()

Decrements the top iterator, if possible.

• int increment\_top ()

Increments the top iterator, if possible.

int decrement\_current ()

Decrements the current iterator, if possible.

int increment\_current ()

Increments the current iterator, if possible.

int decrement\_bottom ()

Decrements the bottom iterator, if possible.

int increment\_bottom ()

Increments the bottom iterator, if possible.

· void on\_realize ()

Handles the callback when the window is realized.

bool on\_expose\_event (GdkEventExpose \*ev)

Handles an on-expose event.

• bool on\_button\_press\_event (GdkEventButton \*ev)

Provides the callback for a button press, and it handles only a left mouse button.

• bool on\_button\_release\_event (GdkEventButton \*ev)

Currently does nothing.

• bool on\_focus\_in\_event (GdkEventFocus \*ev)

This callback is an attempt to get keyboard focus into the eventslots pixmap area.

bool on\_focus\_out\_event (GdkEventFocus \*ev)

This callback handles an out-of-focus event by resetting the flag HAS\_FOCUS.

• bool on\_scroll\_event (GdkEventScroll \*ev)

Handle the scrolling of the window.

void on\_size\_allocate (Gtk::Allocation &)

Handles a size-allocation event.

void on\_move\_up ()

Move to the previous event.

void on\_move\_down ()

Move to the next event.

void on\_frame\_up ()

Move to the previous frame.

• void on\_frame\_down ()

Move to the next frame.

void on\_frame\_home ()

Move to the first frame.

• void on\_frame\_end ()

Move to the last frame.

# **Private Attributes**

· eventedit & m\_parent

Provides a link to the eventedit that created this object.

sequence & m\_seq

Provides a reference to the sequence that this dialog is meant to view or modify.

• editable\_events m\_event\_container

Holds the editable events for this sequence.

· int m slots chars

Provides the number of the characters in the name box.

• int m\_char\_w

Provides the "real" width of a character.

• int m\_setbox\_w

Provides the width of the "set number" box.

int m\_slots\_x

Provides the width of the names box, which is the width of a character for 24 characters.

int m\_slots\_y

Provides the height of the names box, which is hardwired to 24 pixels.

int m\_event\_count

The current number of events in the edited container.

· int m line count

Counts the number of displayed events, which depends on how many events there are (m\_event\_count) and the size of the event list (m\_line\_maximum).

· int m line maximum

Counts the maximum number of displayed events, which depends on the size of the event list (and thus the size of the dialog box for the event editor).

· int m line overlap

Provides a little overlap for paging through the frame.

• int m\_top\_index

The index of the event that is 0th in the visible list of events.

• int m\_current\_index

Indicates the index of the current event within the frame.

editable\_events::iterator m\_top\_iterator

Provides the top "pointer" to the start of the editable-events section that is being shown in the user-interface.

editable\_events::iterator m\_bottom\_iterator

Provides the bottom "pointer" to the end of the editable-events section that is being shown in the user-interface.

editable\_events::iterator m\_current\_iterator

Provides the "pointer" to the event currently in focus.

• int m\_pager\_index

Indicates the event index that matches the index value of the vertical pager.

```
int seq64::eventslots::pager_index ( ) const [inline]
```

# 13.12.2.8 load\_events()

```
bool seq64::eventslots::load_events ( ) [private]
```

Determines how many events can be shown in the GUI [later] and adjusts the top and bottom editable-event iterators to show the first page of events.

### Returns

Returns true if the event iterators were able to be set up as valid.

### 13.12.2.9 set\_current\_event()

Note in the snprintf() calls that the first digit is part of the data byte, so that translation is easier.

### **Parameters**

ei	The iterator that points to the event.
index	The index (re 0) of the event, starting at the top line of the frame. It is a frame index, not a container index.
full_redraw	If true (the default) does a full redraw of the frame. Otherwise, only the current event is drawn. Generally, the only time a single event (actually, two adjacent events) is convenient to draw is when using the arrow keys, where the speed of keystroke auto-repeats makes the full-frame update scrolling very flickery and disconcerting.

```
13.12.2.10 insert_event() [1/2]
```

What actually happens here depends if the new event is before the frame, within the frame, or after the frame, based on the timestamp.

If before the frame: To keep the previous events visible, we do not need to increment the iterators (insertion does not affect multimap iterators), but we do need to increment their indices. The contents shown in the frame should not change.

If at the frame top: The new timestamp equals the top timestamp. We don't know exactly where the new event goes in the multimap, but we do have an new event.

If at the frame bottom: TODO

If after the frame: No action needed if the bottom event is actually at the bottom of the frame. But if the frame is not yet filled, we need to increment the bottom iterator, and its index.

#### Note

Actually, it is far easier to just adjust all the counts and iterators and redraw the screen, as done by the page\_topper() function.

# **Parameters**

edev	The event to insert, prebuilt.
------	--------------------------------

### Returns

Returns true if the event was inserted.

```
13.12.2.11 insert_event() [2/2]
```

It calls the other insert\_event() overload.

Note that we need to qualify the temporary event class object we create below, with the seq64 namespace, otherwise the compiler thinks we're trying to access some Gtkmm thing.

# Parameters

evtimestamp	The time-stamp of the new event, as obtained from the event-edit timestamp field.		
evname	The type name (status name) of the new event, as obtained from the event-edit event-name		
	field.		
evdata0	The first data byte of the new event, as obtained from the event-edit data 1 field.		
evdata1	The second data byte of the new event, as obtained from the event-edit data 2 field. Used only for two-parameter events.		

### Returns

Returns true if the event was inserted.

### 13.12.2.12 delete\_current\_event()

```
bool seq64::eventslots::delete_current_event ( ) [private]
```

To delete the current event, this function moves the current iterator to the next event, deletes the previously-current iterator, adjusts the event count and the bottom iterator, and redraws the pixmap. The exact changes depend upon whether the deleted event was at the top of the visible frame, within the visible frame, or at the bottom the visible frame. Note that only visible events can be the current event, and thus get deleted.

Basically, when an event is deleted, the frame (delimited by the event-index members) stays in place, while the frame iterators move to the previous event. If the top of the frame would move to before the first event, then the frame must shrink.

Top case: If the current iterator is the top (of the frame) iterator, then the top iterator needs to be incremented. The new top event has the same index as the now-gone top event. The index of the bottom event is decremented, since an event before it is now gone. The bottom iterator moves to the next event, which is now at the bottom of the frame. The current event is treated like the top event.

Inside case: If the current iterator is in the middle of the frame, the top iterator and index remain unchanged. The current iterator is incremented, but its index is now the same as the old bottom index. Same for the bottom iterator.

Bottom case: If the current iterator (and bottom iterator) point to the last event in the frame, then both of them need to be decremented. The frame needs to be moved up by one event, so that the current event remains at the bottom (it's just simpler to manage that way).

If there is no event after the bottom of the frame, the iterators that now point to end() must backtrack one event. If the container becomes empty, then everything is invalidated.

### Returns

Returns true if the delete was possible. If the container was empty or became empty, then false is returned.

# 13.12.2.13 modify\_current\_event()

If the timestamp has changed, however, we can't just modify the event in place. Instead, we finish modifying the event, but tell the caller to delete and reinsert the new event (in its proper new location based on timestamp).

This function always copies the original event, modifiles the copy, deletes the original event, and inserts the "new" event into the editable-event container.

### **Parameters**

General Doxygen Provides the second data byte as edited by the user.	
evdata0	Provides the first data byte as edited by the user.
evname	Provides the event name as edited by the user.
evtimestamp	Provides the new event time-stamp as edited by the user.

### Returns

Returns true simply if the event-count is greater than 0.

```
13.12.2.14 save_events()
bool seq64::eventslots::save_events ( ) [private]
```

Also sets the dirty flag for the sequence, via the sequence::add\_event() function, but this doesn't seem to set the perform dirty flag. So now we pass the modification buck to the parent, who passes it to the perform object.

We added a copy\_events() function in the sequence class to replace add\_event() for the purpose of reconstructing the events container for the sequence. It is locked by a mutex, and so will not draw until all is done, preventing a nasty segfault (all segfaults are nasty).

We create a new plain event container here, and then passing it to the new locked/threadsafe sequence::copy\_
events() function that clears the sequence container and copies the events from the parameter container.

Note that this code will operate event if all events were deleted.

### Returns

Returns true if the operations succeeded.

```
13.12.2.15 select_event()
```

```
void seq64::eventslots::select_event (
    int event_index = SEQ64_NULL_EVENT_INDEX,
    bool full_redraw = true ) [private]
```

The event index is provided by converting the y-coordinate of the mouse pointer into a slot number, and then an event index (actually the slot-distance from the m top iterator. Confusing, yes no?

Note that, if the event index is negative, then we just queue up a draw operation, which should paint an empty frame – the event container is empty.

### **Parameters**

event_index	Provides the numeric index of the event in the event frame, or SEQ64_NULL_EVENT if there is
	no event to draw.
full_redraw	Defaulting to true, this parameter can be set to false in some case to reduce the flickering of the
	frame under fast movement.

# 13.12.2.16 set\_text()

const std::string & evdata0,
const std::string & evdata1 ) [private]

### **Parameters**

evcategory	The category of event to be set in the parent.
evtimestamp	The event time-stamp to be set in the parent.
evname	The event name to be set in the parent.
evdata0	The first event data byte to be set in the parent.
evdata1	The second event data byte to be set in the parent.

### 13.12.2.17 enqueue\_draw()

```
void seq64::eventslots::enqueue_draw ( ) [private]
```

# 13.12.2.18 convert\_y()

### **Parameters**

y The y coordinate of the position of the mouse click in the eventslot window/pixmap.

# Returns

Returns the index of the event position in the user-interface, which should range from 0 to m\_line\_count.

# 13.12.2.19 draw\_event()

The slot contains the event details in (so far) one line of text in the box:

```
| timestamp | event kind | channel | data 0 name + value | data 1 name + value
```

Currently, this view shows only events that get copied to the sequence's event list. This rules out the following items from the view:

```
- MThd (song header)
- MTrk and Meta TrkEnd (track marker, a sequence has only one track)
- SeqNr (sequence number)
- SeqSpec (but there are three that might appear, see below)
- Meta TrkName
```

The events that are shown in this view are:

```
- One-data-value events:
- Program Change
- Channel Pressure
- Two-data-value events:
- Note Off
- Note On
- Aftertouch
- Control Change
- Pitch Wheel
- Other:
- SysEx events, with partial show of data bytes
- SeqSpec events (TBD):
- Key
- Scale
- Background sequence
```

The index of the event is shown in the editor portion of the eventedit dialog.

```
13.12.2.20 draw_events()
void seq64::eventslots::draw_events ( ) [private]
```

It first clears the whole bitmap to white, so that no artifacts from the previous state of the frame are left behind.

Need to figure out how to calculate the number of displayable events.

```
m_line_maximum = ???

13.12.2.21 change_vert()

void seq64::eventslots::change_vert ( ) [private]
```

Note that m\_vadjust is the Gtk::Adjustment object that the eventedit parent passes to the gui\_drawingarea\_gtk2 constructor.

The top-event and bottom-event indices (and their corresponding editable-event iterators) delimit the part of the event container that is displayed in the eventslots user-interface. The top-event index starts at 0, and the bottom-event is larger (initially, by 42 slots).

When the scroll-bar thumb moves up or down, we need to change both event indices and both event iterators by the corresponding amount. Luckily, the std::multimap iterator is bidirectional.

Note that we may need to reduce the movement of events to a value less than a page; it can be limited backwards by the value of the top index, and forward by the value of the bottom index.

```
13.12.2.22 page_movement()

void seq64::eventslots::page_movement (
    int new_value ) [private]
```

The adjustment is done via movement from the current position.

Do we even need a way to detect excess movement? The scrollbar, if properly set up, should never move the frame too high or too low. Verified by testing.

### **Parameters**

new_value	Provides the new value of the scrollbar position.
-----------	---

# 13.12.2.23 page\_topper()

The adjustment is done "from scratch". We've found page movement to be an insoluable problem in some editing circumstances. So now we move to the inserted event, and make it the top event.

However, always moving an inserted event to the top is a bit annoying. So now we backtrack so that the inserted event is at the bottom.

#### **Parameters**

newcurrent	Provides the iterator to the event to be shown at the bottom of the frame.
------------	--

# 13.12.2.24 decrement\_top()

```
int seq64::eventslots::decrement_top ( ) [private]
```

# Returns

Returns 0, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be decremented.

# 13.12.2.25 increment\_top()

```
int seq64::eventslots::increment_top ( ) [private]
```

Also handles the top-event index, so that the GUI can display the proper event numbers.

# Returns

Returns the top index, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be incremented, or would increment to the end of the container.

# 13.12.2.26 decrement\_current()

```
int seq64::eventslots::decrement_current ( ) [private]
```

# Returns

Returns the decremented index, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be decremented. Remember that the index ranges only from 0 to m\_line\_count-1, and that is enforced here.

# 13.12.2.27 increment\_current()

```
int seq64::eventslots::increment_current ( ) [private]
```

### Returns

Returns the incremented index, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be incremented. Remember that the index ranges only from 0 to m\_line\_count-1, and that is enforced here.

# 13.12.2.28 decrement\_bottom()

```
int seq64::eventslots::decrement_bottom ( ) [private]
```

### Returns

Returns 0, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be decremented.

# 13.12.2.29 increment\_bottom()

```
int seq64::eventslots::increment_bottom ( ) [private]
```

There is an issue in paging down using the scrollbar where, at the bottom of the scrolling, the bottom iterator ends up bad. Not yet sure how this happens, so for now we backtrack one event if this happens.

# Returns

Returns the incremented index, or SEQ64\_NULL\_EVENT\_INDEX if the iterator could not be incremented.

# 13.12.2.30 on\_realize()

```
void seq64::eventslots::on_realize ( ) [private]
```

It first calls the base-class version of on\_realize(). Then it allocates any additional resources needed.

# 13.12.2.31 on\_expose\_event()

It draws all of the sequences.

# 13.12.2.32 on\_button\_press\_event()

```
13.12.2.33 on_button_release_event()
```

See the same function in the perfroll module.

```
13.12.2.35 on_focus_out_event()
```

```
bool seq64::eventslots::on_focus_out_event (
    GdkEventFocus * ev ) [private]
```

# 13.12.2.36 on\_scroll\_event()

# 13.12.2.37 on\_size\_allocate()

It first calls the base-class version of this function.

```
13.12.2.38 on_move_up()
```

```
void seq64::eventslots::on_move_up ( ) [private]
```

We must scroll up if the event is now before the frame, and should be made the new top event of the frame. Note that this function isn't really an event-response callback. It is called by eventedit::on\_key\_press\_event().

```
13.12.2.39 on_move_down()
```

```
void seq64::eventslots::on_move_down ( ) [private]
```

We must scroll down if the event is now after the frame. Note that this function isn't really an event-response callback. It is called byh eventedit::on\_key\_press\_event().

# 13.12.2.40 on\_frame\_up()

```
void seq64::eventslots::on_frame_up ( ) [private]
```

```
13.12.2.41 on_frame_down()
void seq64::eventslots::on_frame_down ( ) [private]
13.12.2.42 on_frame_home()
void seq64::eventslots::on_frame_home ( ) [private]
13.12.2.43 on_frame_end()
void seq64::eventslots::on_frame_end ( ) [private]
13.12.3 Friends And Related Function Documentation
13.12.3.1 eventedit
friend class eventedit [friend]
13.12.4 Field Documentation
13.12.4.1 m_parent
eventedit& seq64::eventslots::m_parent [private]
13.12.4.2 m_seq
sequence& seq64::eventslots::m_seq [private]

editable_events seq64::eventslots::m_event_container [private]
13.12.4.4 m_slots_chars
int seq64::eventslots::m_slots_chars [private]
Pretty much hardwired to 64 at present. It helps determine the m_slots_x value (the width of the eventslots list).
13.12.4.5 m_char_w
int seq64::eventslots::m_char_w [private]
```

Generated by Doxygen

This value is obtained from a font-renderer accessor function.

13.12.4.6 m\_setbox\_w

```
int seq64::eventslots::m_setbox_w [private]
```

This used to be hardwired to 6 \* 2 (character-width times two).

```
13.12.4.7 m_slots_x
int seq64::eventslots::m_slots_x [private]

13.12.4.8 m_slots_y
int seq64::eventslots::m_slots_y [private]
```

This value was once 22 pixels, but we need a little extra room for our new font. This extra room is compatible enough with the old font, as well.

```
13.12.4.9 m_event_count
```

```
int seq64::eventslots::m_event_count [private]
```

# 13.12.4.10 m\_line\_count

```

# 13.13 seq64::font Class Reference

This class provides a wrapper for rendering fonts that are encoded as a 16 x 16 pixmap file in XPM format.

## **Public Types**

enum Color {
 BLACK,
 WHITE,
 BLACK\_ON\_YELLOW,
 YELLOW\_ON\_BLACK,
 BLACK\_ON\_CYAN,
 CYAN\_ON\_BLACK }

A simple enumeration to describe the basic colors used in writing text.

### **Public Member Functions**

• font ()

Rote default constructor, except that it does add 1 to the cf\_text\_h or co\_text\_h values to use in m\_padded\_h.

void init (Glib::RefPtr< Gdk::Window > windo)

Initialization function for a window on which fonts will be drawn.

void render\_string\_on\_drawable (Glib::RefPtr< Gdk::GC > m\_gc, int x, int y, Glib::RefPtr< Gdk::Drawable > drawable, const char \*str, font::Color col, bool invert=false) const

Draws a text string.

• int char width () const

'Getter' function for member m\_font\_w

• int char\_height () const

'Getter' function for member m font h

int padded\_height () const

'Getter' function for member m\_padded\_h

### **Private Attributes**

· bool m\_use\_new\_font

If true, use the new font, which is a little bit more modern looking, and is also thicker, and thus a little easier to see.

int m\_cell\_w

Specifies the cell width of the whole character cell.

• int m\_cell\_h

Specfies the cell height of the whole character cell.

· int m font w

Specifies the exact width of a character cell, in pixels.

• int m\_font\_h

Specifies the exact height of a character cell, in pixels.

· int m offset

Provides an ad hoc small horizontal or vertical offset for printing strings.

int m padded h

Provides a common constant used by much of the drawing code, but only marginally related to the padded character height.

const Glib::RefPtr< Gdk::Pixmap > \* m\_pixmap

Points to the current pixmap (m\_black\_pixmap or m\_white\_pixmap) to use to render a string.

Glib::RefPtr< Gdk::Pixmap > m\_black\_pixmap

The pixmap in the file src/pixmaps/font\_b.xpm is loaded into this object.

Glib::RefPtr< Gdk::Pixmap > m white pixmap

The pixmap in the file src/pixmaps/font\_w.xpm is loaded into this object.

Glib::RefPtr< Gdk::Pixmap > m\_b\_on\_y\_pixmap

The pixmap in the file src/pixmaps/font\_y.xpm is loaded into this object.

Glib::RefPtr< Gdk::Pixmap > m\_y\_on\_b\_pixmap

The pixmap in the file src/pixmaps/font\_yb.xpm is loaded into this object.

• Glib::RefPtr< Gdk::Pixmap > m\_b\_on\_c\_pixmap

The pixmap in the file  $src/pixmaps/cyan\_wenfont\_y.xpm$  is loaded into this object.

Glib::RefPtr< Gdk::Pixmap > m\_c\_on\_b\_pixmap

The pixmap in the file src/pixmaps/cyan\_wenfont\_yb.xpm is loaded into this object.

• Glib::RefPtr< Gdk::Bitmap > m\_clip\_mask

This object is instantiated as a default object.

### 13.13.1 Member Enumeration Documentation

#### 13.13.1.1 Color

```
enum seq64::font::Color
```

Basically, these two values cause the selection of one or another pixmap (font\_b\_xpm and font\_w\_xpm). We've added two more pixmaps to draw black text on a yellow background (font\_y.xpm) and yellow text on a black background (font\_yb.xpm). Oh, and couple more for cyan and black text-blitting.

## **Enumerator**

BLACK	The first supported color. A black font on a white background.
WHITE	The second supported color. A white font on a black background.
BLACK_ON_YELLOW	A new color, for drawing black text on a yellow background.
YELLOW_ON_BLACK	A new color, for drawing yellow text on a black background.
BLACK_ON_CYAN	A new color, for drawing black text on a cyan background.
CYAN_ON_BLACK	A new color, for drawing cyan text on a black background.

Generated by Doxygen

## 13.13.2 Constructor & Destructor Documentation

```
13.13.2.1 font()
seq64::font::font ( )
```

#### 13.13.3 Member Function Documentation

This function loads four pixmaps that contain the characters to be used to draw text strings.

One pixmap has white characters on a black background, one has black characters on a white background, one has yellow characters on a black background, and one has black characters on a yellow background.

### **Parameters**

wp Provides the windows pointer for the window that holds the color map.

## 13.13.3.2 render\_string\_on\_drawable()

This function grabs the proper font bitmap, extracts the current character pixmap from it, and slaps it down where it needs to be to render the character in the string.

gc	Provides the graphics context for drawing the text using GTK+.
Х	The horizontal location of the text.
У	The vertical location of the text.
a_draw	The drawable object on which to draw the text.
str	The string to draw. Should use a constant string reference instead.
col	The font color to use to draw the string. The supported values are font::BLACK, font::WHITE, font::BLACK_ON_YELLOW, font::YELLOW_ON_BLACK. The actual correct colors are provided by selecting one of four font pixmaps, as described in the init() function.
invert	If true, apply color inversion, if specified.

```
13.13.3.3 char_width()
int seq64::font::char_width ( ) const [inline]
13.13.3.4 char_height()
int seq64::font::char_height ( ) const [inline]
13.13.3.5 padded_height()
int seq64::font::padded_height ( ) const [inline]
13.13.4 Field Documentation
13.13.4.1 m use new font
bool seq64::font::m_use_new_font [private]
13.13.4.2 m_cell_w
int seq64::font::m_cell_w [private]
13.13.4.3 m_cell_h
int seq64::font::m_cell_h [private]
13.13.4.4 m_font_w
int seq64::font::m_font_w [private]
Currently defaults to cf_text_w = 6. Note that a lot of stuff depends on this being 6 at present, even with our new,
slightly wider, font.
13.13.4.5 m_font_h
```

Currently defaults to  $cf_{text_h} = 10$ . Note that a lot of stuff depends on this being 10 at present, even with our new, slightly wider, font. But some of the drawing code doesn't use the character height, but the padded character height.

```
13.13.4.6 m_offset
```

int seq64::font::m\_offset [private]

int seq64::font::m\_font\_h [private]

### 13.13.4.7 m\_padded\_h

int seq64::font::m\_padded\_h [private]

### 13.13.4.8 m\_pixmap

```
const Glib::RefPtr<Gdk::Pixmap>* seq64::font::m_pixmap [mutable], [private]
```

This member used to be an object, but it's probably a bit faster to just use a pointer (or a reference).

## 13.13.4.9 m\_black\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_black_pixmap [private]
```

It contains a black font on a white background. The new-style font, if selected, is in the resources/pixmaps/wenfont ← \_b.xmp pixmap.

### 13.13.4.10 m white pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_white_pixmap [private]
```

It contains a black font on a white background. The new-style font, if selected, is in the resources/pixmaps/wenfont ← \_w.xmp pixmap.

## 13.13.4.11 m\_b\_on\_y\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_b_on_y_pixmap [private]
```

It contains a black font on a yellow background. The new-style font, if selected, is in the resources/pixmaps/wenfont-\_y.xmp pixmap.

## 13.13.4.12 m\_y\_on\_b\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_y_on_b_pixmap [private]
```

It contains a yellow font on a black background. The new-style font, if selected, is resources/pixmaps/wenfont ← \_yb.xmp pixmap.

## 13.13.4.13 m\_b\_on\_c\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_b_on_c_pixmap [private]
```

It contains a black font on a cyan background. It is available only for the new font-style.

#### 13.13.4.14 m\_c\_on\_b\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::font::m_c_on_b_pixmap [private]
```

It contains a cyan font on a black background. It is available only for the new font-style.

### 13.13.4.15 m\_clip\_mask

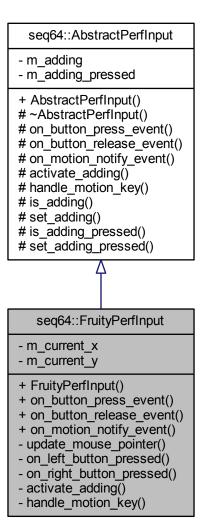

```
Glib::RefPtr<Gdk::Bitmap> seq64::font::m_clip_mask [private]
```

All we know is it seems to be a requirement for creating a pixmap object from an XMP file.

# 13.14 seq64::FruityPerfInput Class Reference

Implements the performance input of that certain fruity sequencer that people seem to like.

Inheritance diagram for seq64::FruityPerfInput:

### **Public Member Functions**

• FruityPerfInput ()

Default constructor.

• bool on\_button\_press\_event (GdkEventButton \*ev, perfroll &roll)

Handles a button-press event in the Fruity manner.

bool on\_button\_release\_event (GdkEventButton \*ev, perfroll &roll)

Handles a button-release event.

• bool on\_motion\_notify\_event (GdkEventMotion \*ev, perfroll &roll)

Handles a Fruity motion-notify event.

#### **Private Member Functions**

void update\_mouse\_pointer (perfroll &roll)

Updates the mouse pointer, implementing a context-sensitive mouse.

• bool on\_left\_button\_pressed (GdkEventButton \*ev, perfroll &roll)

Handles the left button of the mouse.

• bool on\_right\_button\_pressed (GdkEventButton \*ev, perfroll &roll)

Handles the right button of the mouse.

- virtual void activate\_adding (bool, perfroll &)
- virtual bool handle\_motion\_key (bool, perfroll &)

### **Private Attributes**

• long m\_current\_x

The current x value of the mouse.

long m\_current\_y

The current y value of the mouse.

### **Friends**

class perfroll

## **Additional Inherited Members**

### 13.14.1 Constructor & Destructor Documentation

```
13.14.1.1 FruityPerfInput()
```

```
seq64::FruityPerfInput::FruityPerfInput ( ) [inline]
```

### 13.14.2 Member Function Documentation

### 13.14.2.1 on\_button\_press\_event()

ev	The button-press event to process.
roll	The song editor piano roll that is the "parent" of this class.

### Returns

Returns true if a modification occurred.

Implements seq64::AbstractPerfInput.

```
13.14.2.2 on_button_release_event()
```

Why is m\_adding\_pressed modified conditionally when the same modification is then made unconditionally?

#### **Parameters**

ev	The button-release event to process.
roll	The song editor piano roll that is the "parent" of this class.

## Returns

Returns true if a modification occurred.

Implements seq64::AbstractPerfInput.

```
13.14.2.3 on_motion_notify_event()
```

### **Parameters**

ev	The motion-notify event to process.
roll	The song editor piano roll that is the "parent" of this class.

## Returns

Returns true if a modification occurred, and sets the perform modified flag based on that result.

Implements seq64::AbstractPerfInput.

## 13.14.2.4 update\_mouse\_pointer()

Note that perform::convert\_xy() returns its values via side-effects on the last two parameters.

#### **Parameters**

```
roll The song editor piano roll that is the "parent" of this class.
```

### 13.14.2.5 on\_left\_button\_pressed()

It can handle splitting triggers (?), adding notes, and the following clicks to resize the event, or move it, depending on where clicked:

```
    clicked left side: begin a grow/shrink for the left side
    clicked right side: grow/shrink the right side
    clicked in the middle - move it
```

I don't get it, though... all three buttons are handled in the generic button-press callback. Oh, this is just a helper function.

## Parameters

ev	The left-button-press event to process.
roll	The song editor piano roll that is the "parent" of this class.

## Returns

Now returns true if a modification occurred.

## 13.14.2.6 on\_right\_button\_pressed()

I don't get it, though... all three buttons are handled in the generic button-press callback. Oh, this is a helper function.

ev	The right-button-press event to process.
roll	The song editor piano roll that is the "parent" of this class.

### Returns

Returns true if a modification occurred.

Implements seq64::AbstractPerfInput.

## 13.14.3 Friends And Related Function Documentation

## 13.14.3.1 perfroll

```
friend class perfroll [friend]
```

### 13.14.4 Field Documentation

```
13.14.4.1 m_current_x
```

```
long seq64::FruityPerfInput::m_current_x [private]
```

### 13.14.4.2 m\_current\_y

```
long seq64::FruityPerfInput::m_current_y [private]
```

# 13.15 seq64::FruitySeqEventInput Struct Reference

This structure implements the interaction methods for the "fruity" mode of operation.

### **Public Member Functions**

FruitySeqEventInput ()

Default constructor.

void update\_mouse\_pointer (seqevent &ths)

Provides support for a context-sensitive mouse.

• bool on\_button\_press\_event (GdkEventButton \*ev, seqevent &ths)

Implements the on-button-press event callback.

• bool on\_button\_release\_event (GdkEventButton \*ev, seqevent &ths)

Implements the on-button-release callback.

bool on\_motion\_notify\_event (GdkEventMotion \*ev, seqevent &ths)

Implements the on-motion-notify callback.

#### **Data Fields**

• bool m\_justselected\_one

Indicates that the left mouse button was click to start a selection.

• bool m\_is\_drag\_pasting\_start

Set to true when the mouse button is pressed and we're starting to drag some notes to move them and paste them to a different location.

• bool m\_is\_drag\_pasting

Set to true when the left mouse button is pressed for dragging and pasting, set to false when the mouse button is released to drop the pasted items.

## 13.15.1 Constructor & Destructor Documentation

## 13.15.1.1 FruitySeqEventInput()

```
seq64::FruitySeqEventInput::FruitySeqEventInput ( ) [inline]
```

## 13.15.2 Member Function Documentation

## 13.15.2.1 update\_mouse\_pointer()

### **Parameters**

seqev

Provides the sequent pane (actually a strip on the sequent window) to update to show the proper mouse cursor (left pointer, center pointer, and pencil).

### 13.15.2.2 on button press event()

Handles dragging and other actions.

The first thing is to set the values for dragging, then reset the box that holds the dirty redraw spot. If pasting, undo the clipboard, and paste the selected events.

Otherwise, process the mouse actions. The current steps shown below are my initial guesses, to be verified at some point.

### 1. Left button:

- (a) Click:
  - i. A click and release without a drag, or without a Ctrl-Shift, deselects the events.
  - ii. A direct click on an event selects only that event.
- (b) Click-drag:
  - i. If events already selected, adds note and length to the selected notes.
  - ii. Otherwise, select the notes and events.
  - iii. If no events selected in the end, undo the selection.
- · Ctrl-left button:
  - TODO.

The opening part of this function matches that of Seq24SeqEventInput :: on\_button\_press\_event().

### **Parameters**

ev	The button event for the press of a mouse button.
seqev	Provides the sequeent strip to be affected by this button event.

#### Returns

Returns true if a modification was made. It used to return true all the time.

## 13.15.2.3 on\_button\_release\_event()

## Parameters

ev	The button event for the press of a mouse button.
seqev	Provides the sequeent strip to be affected by this button event.

### Returns

Returns true if a modification was made. It used to return true all the time.

## 13.15.2.4 on\_motion\_notify\_event()

#### **Parameters**

ev	The button event for the press of a mouse button.
seqev	Provides the sequeent strip to be affected by this button event.

#### Returns

Returns true if a modification occurred, and sets the perform modified flag based on that result.

### 13.15.3 Field Documentation

### 13.15.3.1 m\_justselected\_one

```
bool seq64::FruitySeqEventInput::m_justselected_one
```

### 13.15.3.2 m\_is\_drag\_pasting\_start

```
\verb|bool seq64::FruitySeqEventInput::m_is\_drag\_pasting\_start|\\
```

### 13.15.3.3 m\_is\_drag\_pasting

bool seq64::FruitySeqEventInput::m\_is\_drag\_pasting

# 13.16 seq64::FruitySeqRollInput Class Reference

Implements the fruity mouse interaction paradigm for the seqroll.

## **Public Member Functions**

• FruitySeqRollInput ()

Default constructor.

void update\_mouse\_pointer (seqroll &ths)

Updates the mouse pointer, implementing a context-sensitive mouse.

• bool on\_button\_press\_event (GdkEventButton \*ev, seqroll &ths)

Implements the fruity on-button-press callback.

bool on\_button\_release\_event (GdkEventButton \*ev, seqroll &ths)

Implements the fruity handling for the on-button-release event.

• bool on\_motion\_notify\_event (GdkEventMotion \*ev, seqroll &ths)

Implements the fruity handling for the on-motion-notify event.

### **Private Attributes**

• bool m\_erase\_painting

Set to tru if we hold the right mouse button down (in "fruity" mode) and start to drag the mouse around, erasing notes.

int m\_drag\_paste\_start\_pos [2]

Holds the original position of the mouse when ctrl-left-click-drag is done, and is used to make sure that the action doesn't occur until a movement of at least 6 pixels has occurred, to avoid unintended actions caused by minimal jitter in the user's hands.

### 13.16.1 Constructor & Destructor Documentation

### 13.16.1.1 FruitySeqRollInput()

```
seq64::FruitySeqRollInput::FruitySeqRollInput ( ) [inline]
```

#### 13.16.2 Member Function Documentation

## 13.16.2.1 update\_mouse\_pointer()

### **Parameters**

```
sroll Provides the "parent" of this interaction class.
```

### 13.16.2.2 on\_button\_press\_event()

This function now uses the needs\_update flag to determine if the perform object should modify().

## **Parameters**

ev	The button event.
sroll	The parent of this "fruity" interaction class.

### Returns

Returns the value of needs update. It used to return only true.

#### 13.16.2.3 on\_button\_release\_event()

ev	The button event.
sroll	The parent of this "fruity" interaction class.

### Returns

Returns the value of needs\_update. It used to return only true.

If in moving mode, adjust for snap and convert deltas into screen coordinates. Since delta\_note was from delta\_y, it will be flipped (delta\_y[0] = note[127], etc.), so we have to adjust.

### 13.16.2.4 on\_motion\_notify\_event()

### **Parameters**

ev	The motion event.
srol	The parent of this "fruity" interaction class. (Why not just inherit and save all these indirect accesses to the segroll? Well, that would make it more difficult to change the mode of interation, in the Options
	menu, on the fly.)

## Returns

Returns the value of needs\_update.

In "fruity" interaction mode, ctrl-left-click-drag on selected note(s) starts a copy/unselect/paste. Doesn't begin the paste until the mouse moves a few pixels, to filter out the unsteady hand.

## 13.16.3 Field Documentation

## 13.16.3.1 m\_erase\_painting

```
bool seq64::FruitySeqRollInput::m_erase_painting [private]
```

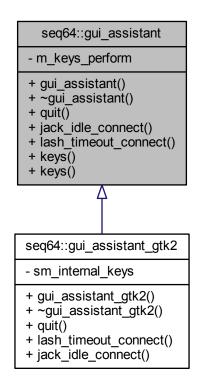

# 13.16.3.2 m\_drag\_paste\_start\_pos

```
int seq64::FruitySeqRollInput::m_drag_paste_start_pos[2] [private]
```

# 13.17 seq64::gui\_assistant Class Reference

This class provides an interface for some of the GUI support needed in Sequencer64.

Inheritance diagram for seq64::gui\_assistant:

## **Public Member Functions**

gui\_assistant (keys\_perform &kp)

This constructor wires in some externally (for now) created objects.

virtual ~gui\_assistant ()

Stock base-class implementation of a virtual destructor.

- virtual void quit ()=0
- virtual void jack\_idle\_connect (jack\_assistant &jack)=0
- virtual void lash\_timeout\_connect (lash \*lashobject)=0
- const keys\_perform & keys () const

 ${\it 'Getter' function for member m\_keys\_perform The const getter.}$ 

keys\_perform & keys ()

'Getter' function for member m\_keys\_perform The un-const getter.

### **Private Attributes**

keys\_perform & m\_keys\_perform

Provides a reference to the app-specific GUI-specific keys\_perform-derived object that an application is going to use for handling sequence-control keys.

## 13.17.1 Detailed Description

It also contain a number of helper objects that all kind of go together; only this assistant object will need to be passed around (by non-GUI code).

#### 13.17.2 Constructor & Destructor Documentation

#### **Parameters**

kp | Provides a set of key codes to be used by the perform object to control patterns and their performance.

```
13.17.2.2 ∼gui_assistant()
virtual seq64::gui_assistant::~gui_assistant ( ) [inline], [virtual]
13.17.3 Member Function Documentation
13.17.3.1 quit()
virtual void seq64::gui_assistant::quit ( ) [pure virtual]
Implemented in seq64::gui_assistant_gtk2.
13.17.3.2 jack_idle_connect()
virtual void seq64::gui_assistant::jack_idle_connect (
              jack_assistant & jack ) [pure virtual]
Implemented in seq64::gui_assistant_gtk2.
13.17.3.3 lash_timeout_connect()
virtual void seq64::gui_assistant::lash_timeout_connect (
              lash * lashobject ) [pure virtual]
Implemented in seq64::gui_assistant_gtk2.
13.17.3.4 keys() [1/2]
```

const keys\_perform& seq64::gui\_assistant::keys ( ) const [inline]

```
13.17.3.5 keys() [2/2]
keys_perform& seq64::gui_assistant::keys ( ) [inline]

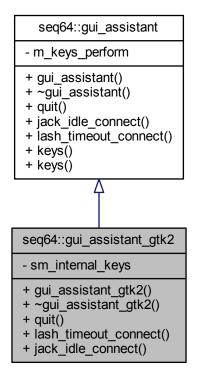

13.17.4 Field Documentation

13.17.4.1 m_keys_perform
keys_perform& seq64::gui_assistant::m_keys_perform [private]
```

# 13.18 seq64::gui\_assistant\_gtk2 Class Reference

This class provides an interface for some of the Gtk/Gdk/Glib support needed in Sequencer64.

Inheritance diagram for seq64::gui\_assistant\_gtk2:

### **Public Member Functions**

• gui\_assistant\_gtk2 ()

This class provides an interface for some of the Gtk/Gdk/Glib support needed in Sequencer64.

virtual ~gui assistant gtk2 ()

Virtual classes require a virtual destructor.

virtual void quit ()

Calls the Glib Main object's quit() function.

virtual void lash\_timeout\_connect (lash \*lashobject)

Connects the LASH timeout-event callback to the Glib timeout object.

virtual void jack\_idle\_connect (jack\_assistant &jack)

Connects the JACK session-event callback to the Glib idle object.

#### **Static Private Attributes**

13.18.1.1 gui\_assistant\_gtk2()

static keys\_perform\_gtk2 sm\_internal\_keys
 Provides a pre-made keys\_perform object.

### 13.18.1 Constructor & Destructor Documentation

```
seq64::gui_assistant_gtk2::gui_assistant_gtk2 ( )

13.18.1.2 ~gui_assistant_gtk2()
```

## 13.18.2 Member Function Documentation

The time-out value is set to 250 ms.

Implements seq64::gui\_assistant.

### 13.18.2.3 jack\_idle\_connect()

If JACK session support is not enabled, we might emit a message. This mainly prevents a compiler warning about an unused parameter.

Implements seq64::gui\_assistant.

## 13.18.3 Field Documentation

## 13.18.3.1 sm\_internal\_keys

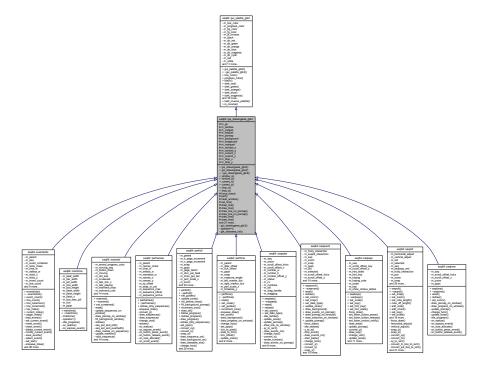

```
keys_perform_gtk2 seq64::gui_assistant_gtk2::sm_internal_keys [static], [private]
```

This object is set into the reference provided in the gui\_assistant base class.

# 13.19 seq64::gui\_drawingarea\_gtk2 Class Reference

Implements the basic drawing areas of the application.

Inheritance diagram for seq64::gui\_drawingarea\_gtk2:

## **Data Structures**

struct rect

A small helper structure representing a rectangle.

## **Public Member Functions**

gui\_drawingarea\_gtk2 (perform &p, int window\_x=0, int window\_y=0)

Perform-only constructor.

• gui\_drawingarea\_gtk2 (perform &a\_perf, Gtk::Adjustment &a\_hadjust, Gtk::Adjustment &a\_vadjust, int window x=0, int window y=0)

Principal constructor.

virtual ~gui\_drawingarea\_gtk2 ()

Provides a destructor to delete allocated objects.

int window\_x () const

'Getter' function for member m\_window\_x

int window\_y () const

'Getter' function for member m window y

int current\_x () const

'Getter' function for member m\_current\_x

int current\_y () const

'Getter' function for member m\_current\_y

int drop\_x () const

'Getter' function for member m\_drop\_x

int drop\_y () const

'Getter' function for member m\_drop\_y

#### **Protected Member Functions**

virtual void force\_draw ()

Provides a common function for redrawing.

perform & perf ()

'Getter' function for member m\_mainperf

void clear\_window ()

Clears the main window.

• void set\_line (Gdk::LineStyle ls, int width=1)

A small wrapper function for readability in line-drawing.

void draw\_line (int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the window.

void draw\_line (const Color &c, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the window after setting the given foreground color.

void draw\_line\_on\_pixmap (int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the pixmap.

void draw\_line\_on\_pixmap (const Color &c, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the pixmap after setting the given foreground color.

void draw\_line (Glib::RefPtr< Gdk::Pixmap > &pixmap, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on any pixmap (not a drawable, though, due to a compiler error after setting the given foreground color.

void draw\_line (Glib::RefPtr< Gdk::Pixmap > &pixmap, const Color &c, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the pixmap after setting the given foreground color.

• void draw line (Glib::RefPtr< Gdk::Drawable > &drawable, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on any pixmap (not a drawable, though, due to a compiler error after setting the given foreground color.

void draw line (Glib::RefPtr< Gdk::Drawable > &drawable, const Color &c, int x1, int y1, int x2, int y2)

A small wrapper function to draw a line on the drawable after setting the given foreground color.

void render\_string (int x, int y, const std::string &s, font::Color color, bool invert=false)

A small wrapper function for readability in string-drawing to the window.

void render\_string\_on\_pixmap (int x, int y, const std::string &s, font::Color color, bool invert=false)

A small wrapper function for readability in string-drawing to the pixmap.

void draw\_rectangle (int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on the window.

• void draw\_rectangle (const Color &c, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing.

• void draw rectangle (Glib::RefPtr< Gdk::Drawable > &drawable, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on a "drawable" context, where the foreground color has already been specified.

• void draw\_rectangle (Glib::RefPtr< Gdk::Drawable > &drawable, const Color &c, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on any drawable context.

void draw rectangle (Glib::RefPtr< Gdk::Pixmap > &pixmap, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on a "pixmap" context, where the foreground color has already been specified.

• void draw\_rectangle (Glib::RefPtr< Gdk::Pixmap > &pixmap, const Color &c, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on any pixmap context.

• void draw\_rectangle\_on\_pixmap (int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on the pixmap.

void draw\_rectangle\_on\_pixmap (const Color &c, int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on the pixmap.

void draw\_normal\_rectangle\_on\_pixmap (int x, int y, int lx, int ly, bool fill=true)

A small wrapper function for readability in box-drawing on the pixmap.

· void draw\_drawable (int xsrc, int ysrc, int xdest, int ydest, int width, int height)

Provides the most common use case for redrawing.

· void scroll\_hadjust (Gtk::Adjustment &hadjust, double step)

This function provides optimization for the on\_scroll\_event() functions, and should provide support for having the seqedit/seqroll/seqtime/seqdata panes follow the scrollbar, in a future upgrade (now partly in place).

void scroll vadjust (Gtk::Adjustment &vadjust, double step)

This function is the vertical version of the scroll\_hadjust() function, intended for adding keystroke vertical scrolling using the Page-Up and Page-Down keys, as a new feature of Sequencer64.

- void scroll hset (Gtk::Adjustment &hadjust, double value)
- void scroll vset (Gtk::Adjustment &vadjust, double value)
- void set current drop x (int x)

Sets the current x value and the drop x value.

void set\_current\_drop\_y (int y)

Sets the current y value and the drop y value.

· void on\_realize ()

For this GTK callback, on realization of window, initialize the shiz.

### **Protected Attributes**

Glib::RefPtr< Gdk::GC > m gc

The graphics context, which is required for ever drawing and rendering operation.

• Glib::RefPtr< Gdk::Window > m window

Provides the default "window".

• Gtk::Adjustment & m vadjust

Provides an object for vertical "adjustments".

Gtk::Adjustment & m\_hadjust

Provides an object for horizontal "adjustments".

Glib::RefPtr< Gdk::Pixmap > m\_pixmap

Provides the default "pixmap".

Glib::RefPtr< Gdk::Pixmap > m background

Another pixmap, used for backgrounds.

Glib::RefPtr< Gdk::Pixmap > m\_foreground

Another pixmap, used for foregrounds.

• perform & m\_mainperf

A frequent hook into the main perform object.

• int m\_window\_x

Window sizes.

· int m\_window\_y

Window height value.

· int m current x

The x and y value of the current location of the mouse (during dragging?)

int m\_current\_y

Current mouse y value.

• int m\_drop\_x

These values are used when roping and highlighting a bunch of events.

• int m\_drop\_y

Current mouse y-drop value.

## **Private Member Functions**

- gui\_drawingarea\_gtk2 (const gui\_drawingarea\_gtk2 &)
- gui\_drawingarea\_gtk2 & operator= (const gui\_drawingarea\_gtk2 &)
- · void gtk\_drawarea\_init ()

Does basic initialization for each of the constructors.

## **Additional Inherited Members**

## 13.19.1 Detailed Description

Note that this class really "isn't" a gui\_pallete\_gtk2; it should simply "have" one. But that base class must be derived from Gtk::DrawingArea. We don't want to waste some space by using a "has-a" relationship, and also put up with having to access the palette indirectly. So, in this case, we tolerate the less strict implementation.

## 13.19.2 Constructor & Destructor Documentation

```
13.19.2.2 gui_drawingarea_gtk2() [2/3]
seq64::gui\_drawingarea\_gtk2::gui\_drawingarea\_gtk2 (
             perform & p,
             int window_x = 0,
             int window_y = 0)
13.19.2.3 gui_drawingarea_gtk2() [3/3]
seq64::gui\_drawingarea\_gtk2::gui\_drawingarea\_gtk2 (
             perform & a_perf,
             Gtk::Adjustment & a_hadjust,
             Gtk::Adjustment & a_vadjust,
             int window_x = 0,
             int window_y = 0)
13.19.2.4 \simgui_drawingarea_gtk2()
seq64::gui_drawingarea_gtk2::~gui_drawingarea_gtk2 ( ) [virtual]
13.19.3 Member Function Documentation
13.19.3.1 operator=()
gui_drawingarea_gtk2& seq64::gui_drawingarea_gtk2::operator= (
             const gui_drawingarea_gtk2 & ) [private]
13.19.3.2 window_x()
int seq64::gui_drawingarea_gtk2::window_x ( ) const [inline]
13.19.3.3 window_y()
int seq64::gui_drawingarea_gtk2::window_y ( ) const [inline]
13.19.3.4 current_x()
int seq64::gui_drawingarea_gtk2::current_x ( ) const [inline]
13.19.3.5 current_y()
int seq64::gui_drawingarea_gtk2::current_y ( ) const [inline]
```

```
13.19.3.6 drop_x()
int seq64::gui_drawingarea_gtk2::drop_x ( ) const [inline]

13.19.3.7 drop_y()
int seq64::gui_drawingarea_gtk2::drop_y ( ) const [inline]

13.19.3.8 force_draw()
virtual void seq64::gui_drawingarea_gtk2::force_draw ( ) [inline], [protected], [virtual]
This function forces a redraw. Some classes extend this function.
Reimplemented in seq64::seqroll, seq64::seqevent, and seq64::seqkeys.

13.19.3.9 perf()
perform& seq64::gui_drawingarea_gtk2::perf ( ) [inline], [protected]

13.19.3.10 clear_window()
void seq64::gui_drawingarea_gtk2::clear_window ( ) [inline], [protected]
```

One less need to access m\_window directly.

```
13.19.3.11 set_line()
```

Sets the attributes of a line to be drawn.

ls	Provides the Gtk-specific line style.
width	Provides the width of the line to be drawn. It defaults to the most common value, 1.

```
int x2, int y2) [inline], [protected]
```

x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
<i>y</i> 2	The y coordinate of the ending point.

## **13.19.3.13** draw\_line() [2/6]

### **Parameters**

С	The foreground color in which to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## 13.19.3.14 draw\_line\_on\_pixmap() [1/2]

```
void seq64::gui_drawingarea_gtk2::draw_line_on_pixmap (
    int x1,
    int y1,
    int x2,
    int y2 ) [inline], [protected]
```

## Parameters

x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
<i>y</i> 2	The y coordinate of the ending point.

## 13.19.3.15 draw\_line\_on\_pixmap() [2/2]

С	The foreground color in which to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## **13.19.3.16** draw\_line() [3/6]

```
void seq64::gui_drawingarea_gtk2::draw_line (
    Glib::RefPtr< Gdk::Pixmap > & pixmap,
    int x1,
    int y1,
    int x2,
    int y2 ) [inline], [protected]
```

### **Parameters**

pixmap	Provides the Gdk::Pixmap pointer needed to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## **13.19.3.17** draw\_line() [4/6]

## **Parameters**

pixmap	Provides the Gdk::Drawable pointer needed to draw the line.
С	The foreground color in which to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## **13.19.3.18** draw\_line() [5/6]

```
void seq64::gui_drawingarea_gtk2::draw_line (
```

```
Glib::RefPtr< Gdk::Drawable > & drawable, int x1, int y1, int x2, int y2) [inline], [protected]
```

drawable	Provides the Gdk::Drawable pointer needed to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## **13.19.3.19** draw\_line() [6/6]

### **Parameters**

drawable	Provides the Gdk::Drawable pointer needed to draw the line.
С	The foreground color in which to draw the line.
x1	The x coordinate of the starting point.
y1	The y coordinate of the starting point.
x2	The x coordinate of the ending point.
y2	The y coordinate of the ending point.

## 13.19.3.20 render\_string()

```
void seq64::gui_drawingarea_gtk2::render_string (
    int x,
    int y,
    const std::string & s,
    font::Color color,
    bool invert = false ) [inline], [protected]
```

X	The x-coordinate of the origin.
У	The y-coordinate of the origin.
s	The string to be drawn.
color	The color with which to draw the string.
invert	If true, apply color inversion, if active. Defaults to false.

### 13.19.3.21 render\_string\_on\_pixmap()

```
void seq64::gui_drawingarea_gtk2::render_string_on_pixmap (
    int x,
    int y,
    const std::string & s,
    font::Color color,
    bool invert = false ) [inline], [protected]
```

## **Parameters**

х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
s	The string to be drawn.
color	The color with which to draw the string.
invert	If true, apply color inversion, if active. Defaults to false.

### 13.19.3.22 draw\_rectangle() [1/6]

#### **Parameters**

Х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color). Defaults
	to true.

## 13.19.3.23 draw\_rectangle() [2/6]

It adds setting the foreground color to the <a href="draw\_rectangle">draw\_rectangle</a>() function.

С	Provides the foreground color to set	

X	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color). Defaults
	to true.

## 13.19.3.24 draw\_rectangle() [3/6]

```
void seq64::gui_drawingarea_gtk2::draw_rectangle (
    Glib::RefPtr< Gdk::Drawable > & drawable,
    int x,
    int y,
    int lx,
    int ly,
    bool fill = true ) [inline], [protected]
```

#### **Parameters**

drawable	The object on which to draw the rectangle.
Х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color).
	Defaults to true.

# **13.19.3.25** draw\_rectangle() [4/6]

```
void seq64::gui_drawingarea_gtk2::draw_rectangle (
        Glib::RefPtr< Gdk::Drawable > & drawable,
        const Color & c,
        int x,
        int y,
        int lx,
        int ly,
        bool fill = true ) [protected]
```

It also supports setting the foreground color to the <a href="mailto:draw\_rectangle">draw\_rectangle</a>() function.

We have a number of such functions: for the main window, for the main pixmap, and for any drawing surface. Is the small bit of conciseness worth it?

drawable	The surface on which to draw the box.
С	Provides the foreground color to set.
X	The x-coordinate of the origin.

У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color).
	Defaults to true.

## 13.19.3.26 draw\_rectangle() [5/6]

```
void seq64::gui_drawingarea_gtk2::draw_rectangle (
    Glib::RefPtr< Gdk::Pixmap > & pixmap,
    int x,
    int y,
    int lx,
    int ly,
    bool fill = true ) [inline], [protected]
```

#### **Parameters**

pixmap	The object on which to draw the rectangle.
Х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color).
	Defaults to true.

## 13.19.3.27 draw\_rectangle() [6/6]

It also supports setting the foreground color to the <a href="mailto:draw\_rectangle">draw\_rectangle</a>() function.

We have a number of such functions: for the main window, for the main pixmap, and for any drawing surface. Is the small bit of conciseness worth it?

pixmap	The surface on which to draw the box.
С	Provides the foreground color to set.
X	The x-coordinate of the origin.
У	The y-coordinate of the origin.

lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color).
	Defaults to true.

## 13.19.3.28 draw\_rectangle\_on\_pixmap() [1/2]

### **Parameters**

Х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color). Defaults
	to true.

## 13.19.3.29 draw\_rectangle\_on\_pixmap() [2/2]

It adds setting the foreground color to the <a href="mailto:draw\_rectangle">draw\_rectangle</a>() function.

С	Provides the foreground color to set.
Х	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color). Defaults
	to true.

### 13.19.3.30 draw\_normal\_rectangle\_on\_pixmap()

```
void seq64::gui_drawingarea_gtk2::draw_normal_rectangle_on_pixmap (
    int x,
    int y,
    int lx,
    int ly,
    bool fill = true ) [protected]
```

It uses Gtk to get the proper background styling for the rectangle.

### **Parameters**

X	The x-coordinate of the origin.
У	The y-coordinate of the origin.
lx	The width of the box.
ly	The height of the box.
fill	If true, fill the rectangle with the current foreground color, as set by m_gc->set_foreground(color). Defaults
	to true.

## 13.19.3.31 draw\_drawable()

```
void seq64::gui_drawingarea_gtk2::draw_drawable (
    int xsrc,
    int ysrc,
    int xdest,
    int ydest,
    int width,
    int height ) [inline], [protected]
```

## 13.19.3.32 scroll\_hadjust()

This function is currently duplicated in the gui\_drawingarea\_gtk2 and gui\_window\_gtk2 modules.

## **Parameters**

hadjust	Provides a reference to the adjustment object to be adjusted. Do we really need this to be a parameter? Why not just use the m_hadjust member? (Note that this member is not present in the similar gui_window_gtk2 class.)
step	Provides the step value to use for adjusting the horizontal scrollbar. If negative, the adjustment is leftward. If positive, the adjustment is rightward. It can be the value of m_hadjust->get_step_increment(), or provided especially to keep up with the progress bar.

## 13.19.3.33 scroll\_vadjust()

```
void seq64::gui_drawingarea_gtk2::scroll_vadjust (
```

```
Gtk::Adjustment & vadjust,
double step ) [protected]
```

vadjust	Provides a reference to the adjustment object to be adjusted.
step	Provides the step value to use for adjusting the vertical scrollbar. If negative, the adjustment is upward. If positive, the adjustment is downward. It can be the value of m_vadjust->get_step_increment().

## 13.19.3.34 scroll\_hset()

### 13.19.3.35 scroll\_vset()

## 13.19.3.36 set\_current\_drop\_x()

### **Parameters**

x The x value to be set.

### 13.19.3.37 set\_current\_drop\_y()

#### **Parameters**

```
y The y value to be set.
```

## 13.19.3.38 gtk\_drawarea\_init()

```
void seq64::gui_drawingarea_gtk2::gtk_drawarea_init ( ) [private]
```

```
13.19.3.39 on_realize()
```

```
void seq64::gui_drawingarea_gtk2::on_realize ( ) [protected]
```

It allocates any additional resources that weren't initialized in the constructor.

### 13.19.4 Field Documentation

## 13.19.4.1 m\_gc

```
Glib::RefPtr<Gdk::GC> seq64::gui_drawingarea_gtk2::m_gc [protected]
```

#### 13.19.4.2 m window

```
Glib::RefPtr<Gdk::Window> seq64::gui_drawingarea_gtk2::m_window [protected]
```

Wrapper functions with undecorated wrapper names are used for accessing this item. We hope to be able to hide this items completely some day.

## 13.19.4.3 m\_vadjust

```
Gtk::Adjustment& seq64::gui_drawingarea_gtk2::m_vadjust [protected]
```

## 13.19.4.4 m\_hadjust

```
Gtk::Adjustment& seq64::gui_drawingarea_gtk2::m_hadjust [protected]
```

### 13.19.4.5 m\_pixmap

```
Glib::RefPtr<Gdk::Pixmap> seq64::gui_drawingarea_gtk2::m_pixmap [protected]
```

Wrapper functions with undecorated wrapper names are used for accessing this item. We hope to be able to hide this items completely some day.

# 13.19.4.6 m\_background

```
Glib::RefPtr<Gdk::Pixmap> seq64::gui_drawingarea_gtk2::m_background [protected]
```

Our wrappers still leave this member exposed (giggle).

### 13.19.4.7 m\_foreground

```
Glib::RefPtr<Gdk::Pixmap> seq64::gui_drawingarea_gtk2::m_foreground [protected]
```

Our wrappers still leave this member exposed.

```
13.19.4.8 m_mainperf
```

```
perform& seq64::gui_drawingarea_gtk2::m_mainperf [protected]
```

We could move this into yet another base class, since a number of classes don't need it. Probably not worth the effort at this time.

```
13.19.4.9 m_window_x
```

```
int seq64::gui_drawingarea_gtk2::m_window_x [protected]
```

Could make this constant, but some windows are resizable. Window width value.

```
13.19.4.10 m_window_y
```

```
int seq64::gui_drawingarea_gtk2::m_window_y [protected]
```

13.19.4.11 m\_current\_x

```
int seq64::gui_drawingarea_gtk2::m_current_x [protected]
```

Current mouse x value.

```
13.19.4.12 m_current_y
```

```
int seq64::gui_drawingarea_gtk2::m_current_y [protected]
```

13.19.4.13 m\_drop\_x

```
int seq64::gui_drawingarea_gtk2::m_drop_x [protected]
```

Provides the x and y value of where the dragging started. Current mouse x-drop value.

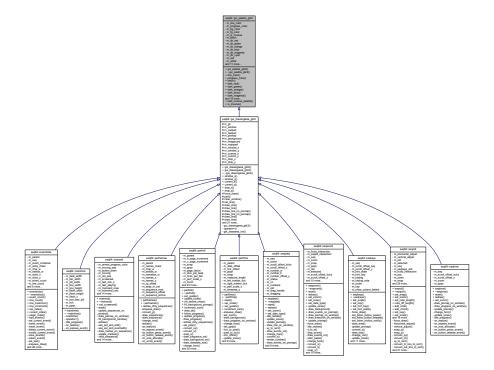

```
13.19.4.14 m_drop_y
```

```
int seq64::gui_drawingarea_gtk2::m_drop_y [protected]
```

# 13.20 seq64::gui\_palette\_gtk2 Class Reference

Implements a stock palette of Gdk::Color elements.

Inheritance diagram for seq64::gui\_palette\_gtk2:

# **Public Member Functions**

• gui\_palette\_gtk2 ()

Principal constructor.

~gui\_palette\_gtk2 ()

Provides a destructor to delete allocated objects.

· const Color & line color () const

'Getter' function for member m\_line\_color Provides an experimental way to change some line colors from black to something else.

const Color & progress\_color () const

'Getter' function for member m\_progress\_color Provides an experimental way to change the progress line color from black to something else.

· const Color & black () const

'Getter' function for member m\_black Although these color getters return static values (if so compiled), these colors are used only in the window and drawing-area classes, so no need to make these functions static.

· const Color & dark\_red () const

'Getter' function for member m\_dk\_red

· const Color & dark\_green () const

'Getter' function for member m\_dk\_green

• const Color & dark\_orange () const

'Getter' function for member m\_dk\_orange

• const Color & dark\_blue () const

'Getter' function for member m\_dk\_blue

const Color & dark\_magenta () const

'Getter' function for member m\_dk\_magenta

const Color & dark\_cyan () const

'Getter' function for member m\_dk\_cyan

• const Color & white () const

'Getter' function for member m\_white

· const Color & grey () const

'Getter' function for member m\_grey

const Color & dark\_grey () const

'Getter' function for member m\_dk\_grey

const Color & light\_grey () const

'Getter' function for member m\_lt\_grey

· const Color & red () const

'Getter' function for member m\_red

· const Color & orange () const

'Getter' function for member m\_orange

const Color & yellow () const

'Getter' function for member m\_yellow

· const Color & green () const

'Getter' function for member m\_green

const Color & blue () const

'Getter' function for member m\_blue

· const Color & black\_paint () const

'Getter' function for member m\_blk\_paint

const Color & white\_paint () const

'Getter' function for member m\_wht\_paint

· const Color & black key () const

'Getter' function for member m blk key

• const Color & white\_key () const

'Getter' function for member m\_wht\_key

const Color & bg\_color () const

'Getter' function for member m\_bg\_color

void bg\_color (const Color &c)

'Setter' function for member m\_bg\_color

const Color & fg\_color () const

'Getter' function for member m\_fg\_color

void fg\_color (const Color &c)

'Setter' function for member m fg color

# **Static Public Member Functions**

• static void <a href="load\_inverse\_palette">load\_inverse\_palette</a> (bool inverse=true)

Provides an alternate color palette, somewhat constrained by the colors in the font bitmaps.

• static bool is\_inverse ()

Indicates if the inverse color palette is loaded.

# **Protected Types**

· typedef Gdk::Color Color

Provides a type for the color object.

### **Private Attributes**

• Color m\_line\_color

Provides the line color.

• Color m\_progress\_color

Provides the progress bar color.

• Color m\_bg\_color

The current background color.

• Color m\_fg\_color

The current foreground color.

### **Static Private Attributes**

• static bool m\_is\_inverse

Flags the presense of the inverse color palette.

· static const Color m black

Provides the black color.

· static const Color m\_dk\_red

Provides a blood-red color.

static const Color m\_dk\_green

Provides a dark green color.

static const Color m dk orange

Provides a dark orange color.

static const Color m\_dk\_blue

Provides the dark blue color.

static const Color m\_dk\_magenta

Provides the dark cyan color.

• static const Color m\_dk\_cyan

Provides the dark cyan color.

• static const Color m\_red

Provides the red color.

• static const Color m\_white

Provides the white color.

• static const Color m\_orange

Provides the orange color.

• static const Color m\_yellow

Provides the yellow color.

• static const Color m\_green

Provides the green color.

• static const Color m\_blue

Provides the blue color.

static Color m\_grey

Provides the grey color.

static Color m\_dk\_grey

Provides the dark grey color.

static Color m\_lt\_grey

Provides the light grey color.

· static Color m blk paint

An invertible black color.

• static Color m\_wht\_paint

An invertible white color.

static Color m\_blk\_key

Provides the color of a black key.

· static Color m wht key

Provides the color of a white key.

# 13.20.1 Detailed Description

Note that this class must be derived from Gtk::DrawingArea (or Gtk::Widget) in order to get access to the get\_
default\_colormap() function used in the constructor.

## 13.20.2 Member Typedef Documentation

13.20.2.1 Color

```
typedef Gdk::Color seq64::gui_palette_gtk2::Color [protected]
```

The following uses are made of each color:

- Black. The background color of armed patterns. The color of most lines in the user interface, including the main grid lines. The default color of progress lines and text.
- White. The default background color of just about everything drawn in the application.
- · Grey. The color of minor grid lines and the markers for the currently-selected scale.
- Dark grey. The color of some grid lines, and the background of a queued pattern slot.
- Light grey. The color of some grid lines.
- · Red. The optional color of progress bars.
- · Orange. The fill-in color for selected notes and events.
- Dark orange. The color of selected event data lines and the color of the selection box for events to be pasted.
- Yellow. The background of the pattern and name slots for empty patterns. The text color for selected empty pattern slots.
- · Green. Not yet used.
- · Blue. Not yet used.
- Dark cyan. The background color of muted patterns currently in edit, or the pattern that contains the original data for an imported SMF 0 song. The text color of an unmuted pattern currently in edit. These colors apply to the pattern editor and the song editor. The color of the selected background pattern in the song editor.
- Line color. The generic line color, meant for expansion. Currently black.
- Progress color. The progress line color. Black by default, but can be set to red.
- · Background color. The currently-in-use background color. Can vary a lot when a pixmap is being redrawn.
- Foreground color. The currently-in-use foreground color. Can vary a lot when a pixmap is being redrawn.

# 13.20.3 Constructor & Destructor Documentation

```
13.20.3.1 gui_palette_gtk2()
```

seq64::gui\_palette\_gtk2::gui\_palette\_gtk2 ( )

In the constructor one can only allocate colors; get\_window() returns 0 because this window has not yet been realized. Also note that the possible color names that can be used are found in /usr/share/X11/rgb.txt.

```
13.20.3.2 \simgui_palette_gtk2() seq64::gui_palette_gtk2::\simgui_palette_gtk2 ( )
```

#### 13.20.4 Member Function Documentation

#### 13.20.4.1 load\_inverse\_palette()

Inverse is not a complete inverse. It is more like a "night" mode. However, there are still some bright colors even in this mode. Some colors, such as the selection color (orange) are the same in either mode.

#### **Parameters**

inverse If true, load the alternate palette. Otherwise, load the default palette.

## 13.20.4.2 is\_inverse()

```
static bool seq64::gui_palette_gtk2::is_inverse ( ) [inline], [static]
```

# 13.20.4.3 line\_color()

```
\verb|const Color@seq64::gui\_palette_gtk2::line\_color () const [inline]|\\
```

Might eventually be selectable from the "user" configuration file

### 13.20.4.4 progress\_color()

```
const Color& seq64::gui_palette_gtk2::progress_color ( ) const [inline]
```

Now selectable from the "user" configuration file.

```
13.20.4.5 black()
const Color& seq64::gui_palette_gtk2::black ( ) const [inline]
13.20.4.6 dark_red()
const Color& seq64::gui_palette_gtk2::dark_red ( ) const [inline]
13.20.4.7 dark_green()
const Color& seq64::gui_palette_gtk2::dark_green ( ) const [inline]
13.20.4.8 dark_orange()
const Color& seq64::gui_palette_gtk2::dark_orange ( ) const [inline]
13.20.4.9 dark_blue()
const Color& seq64::gui_palette_gtk2::dark_blue ( ) const [inline]
13.20.4.10 dark_magenta()
const Color& seq64::gui_palette_gtk2::dark_magenta ( ) const [inline]
13.20.4.11 dark_cyan()
const Color& seq64::gui_palette_gtk2::dark_cyan ( ) const [inline]
13.20.4.12 white()
const Color& seq64::gui_palette_gtk2::white ( ) const [inline]
13.20.4.13 grey()
const Color& seq64::gui_palette_gtk2::grey ( ) const [inline]
13.20.4.14 dark_grey()
const Color& seq64::gui_palette_gtk2::dark_grey ( ) const [inline]
```

```
13.20.4.15 light_grey()
const Color& seq64::gui_palette_gtk2::light_grey ( ) const [inline]
13.20.4.16 red()
const Color& seq64::gui_palette_gtk2::red ( ) const [inline]
13.20.4.17 orange()
const Color& seq64::gui_palette_gtk2::orange ( ) const [inline]
13.20.4.18 yellow()
const Color& seq64::gui_palette_gtk2::yellow ( ) const [inline]
13.20.4.19 green()
const Color& seq64::gui_palette_gtk2::green ( ) const [inline]
13.20.4.20 blue()
const Color& seq64::gui_palette_gtk2::blue ( ) const [inline]
13.20.4.21 black_paint()
const Color& seq64::gui_palette_gtk2::black_paint ( ) const [inline]
13.20.4.22 white_paint()
const Color& seq64::gui_palette_gtk2::white_paint ( ) const [inline]
13.20.4.23 black_key()
const Color& seq64::gui_palette_gtk2::black_key ( ) const [inline]
13.20.4.24 white_key()
const Color& seq64::gui_palette_gtk2::white_key ( ) const [inline]
```

```
13.20.4.25 bg_color() [1/2]
const Color& seq64::gui_palette_gtk2::bg_color ( ) const [inline]
13.20.4.26 bg_color() [2/2]
void seq64::gui_palette_gtk2::bg_color (
             const Color & c ) [inline]
13.20.4.27 fg_color() [1/2]
const Color& seq64::gui_palette_gtk2::fg_color ( ) const [inline]
13.20.4.28 fg_color() [2/2]
void seq64::gui_palette_gtk2::fg_color (
             const Color & c ) [inline]
13.20.5 Field Documentation
13.20.5.1 m_is_inverse
bool seq64::gui_palette_gtk2::m_is_inverse [static], [private]
By default, the inverse color palette is not loaded.

```

# 13.21 seq64::gui\_window\_gtk2 Class Reference

This class supports a basic interface for Gtk::Window-derived objects.

Inheritance diagram for seq64::gui window gtk2:

### **Public Member Functions**

• gui\_window\_gtk2 (perform &p, int window\_x=0, int window\_y=0)

Principal constructor, has a reference to the all-important perform object.

• virtual  $\sim$ gui\_window\_gtk2 ()

This rote constructor does nothing.

## **Protected Member Functions**

• perform & perf ()

'Getter' function for member m\_mainperf

· virtual void quit ()

Provides "quit" functionality that WE HAVE OVERLOOKED!!! At some point we need to rectify this situation, probably for the sake of session support.

• int redraw period ms () const

'Getter' function for member m\_redraw\_period\_ms

· bool is\_realized () const

'Getter' function for member m\_is\_realized

void scroll\_hadjust (Gtk::Adjustment &hadjust, double step)

This function provides optimization for the on\_scroll\_event() functions, and should provide support for having the seqedit/seqroll/seqtime/seqdata panes follow the scrollbar, in a future upgrade.

void scroll\_vadjust (Gtk::Adjustment &vadjust, double step)

This function is the vertical version of scroll hadjust().

void scroll\_hset (Gtk::Adjustment &hadjust, double value)

This function is the horizontal scroll setter.

void scroll\_vset (Gtk::Adjustment &vadjust, double value)

This function is the vertical scroll setter.

• void on\_realize ()

This callback function calls the base-class on\_realize() function, and sets the m\_is\_realized flag.

### **Private Attributes**

• perform & m\_mainperf

The master object, sort of a sequence buss for all of the sequence.

• int m\_window\_x

Window sizes.

• int m\_window\_y

The height of the window.

int m\_redraw\_period\_ms

Provides the timer period for the eventedit timer, used to determine the rate of redrawing.

· bool m is realized

Indicates if on\_realize() has been called.

#### 13.21.1 Constructor & Destructor Documentation

```
13.21.1.1 gui_window_gtk2()
```

#### Note

We've collected the redraw timeouts into a base-class member. Most were valued at c\_redraw\_ms (40 ms), but mainwnd used 25 ms, so beware. We will eventually make this a user-interface parameter.

#### **Parameters**

р	Refers to the main performance object.
window⊷	The width of the window.
_X	
window←	The height of the window.
_y	

```
13.21.1.2 ∼gui_window_gtk2()
seq64{::}gui\_window\_gtk2{::}{\sim}gui\_window\_gtk2 \text{ ( ) } [virtual]
13.21.2 Member Function Documentation
13.21.2.1 perf()
perform& seq64::gui_window_gtk2::perf ( ) [inline], [protected]
13.21.2.2 quit()
virtual void seq64::gui_window_gtk2::quit ( ) [inline], [protected], [virtual]
13.21.2.3 redraw_period_ms()
int seq64::gui_window_gtk2::redraw_period_ms ( ) const [inline], [protected]
13.21.2.4 is_realized()
bool seq64::gui_window_gtk2::is_realized ( ) const [inline], [protected]
13.21.2.5 scroll_hadjust()
void seq64::gui_window_gtk2::scroll_hadjust (
             Gtk::Adjustment & hadjust,
              double step ) [protected]
```

This function is currently duplicated in the gui\_drawingarea\_gtk2 and gui\_window\_gtk2 modules.

# **Parameters**

hadjust	Provides a reference to the adjustment object to be adjusted.
step	Provides the step value to use for adjusting the horizontal scrollbar. If negative, the adjustment is
	leftward. If positive, the adjustment is rightward. It can be the value of
	m_hadjust->get_step_increment(), or provided especially to keep up with the progress bar.

# 13.21.2.6 scroll\_vadjust()

vadjust	Provides a reference to the adjustment object to be adjusted.
step	Provides the step value to use for adjusting the vertical scrollbar. If greater than 0, the movement is
	downward. If less than zero, the movement is upward.

# 13.21.2.7 scroll\_hset()

# **Parameters**

hadjust	Provides a reference to the adjustment object to be set. It is clamped as necessary.
value	Provides the value to use for setting the horizontal scrollbar.

### 13.21.2.8 scroll\_vset()

# Parameters

vadjust	Provides a reference to the vertical adjustment object to be set. It is clamped as necessary.
value	Provides the value to use for setting the vertical scrollbar.

# 13.21.2.9 on\_realize()

```
void seq64::gui_window_gtk2::on_realize ( ) [protected]
```

# 13.21.3 Field Documentation

# 13.21.3.1 m\_mainperf

```
perform& seq64::gui_window_gtk2::m_mainperf [private]
```

And a whole lot more than that.

```
13.21.3.2 m_window_x
```

```
int seq64::gui_window_gtk2::m_window_x [private]
```

Could make this constant, but some windows are resizable. The width of the window.

```
13.21.3.3 m_window_y
```

```
int seq64::gui_window_gtk2::m_window_y [private]
```

# 13.21.3.4 m\_redraw\_period\_ms

```
int seq64::gui_window_gtk2::m_redraw_period_ms [private]
```

This is currently hardwired to 40 ms in Linux, and 20 ms in Windows. Note that mainwnd used 25 ms.

### 13.21.3.5 m\_is\_realized

```
bool seq64::gui_window_gtk2::m_is_realized [private]
```

In some cases, we don't want to draw in objects that haven't yet appeared, otherwise crashes occur.

# 13.22 seq64::jack\_assistant Class Reference

This class provides the performance mode JACK support.

#### **Public Member Functions**

jack\_assistant (perform &parent, int bpminute=SEQ64\_DEFAULT\_BPM, int ppqn=SEQ64\_USE\_DEFAUL
 — T\_PPQN, int bpm=SEQ64\_DEFAULT\_BEATS\_PER\_MEASURE, int beatwidth=SEQ64\_DEFAULT\_BEAT
 — WIDTH)

This constructor initializes a number of member variables, some of them public!

•  $\sim$ jack\_assistant ()

The destructor doesn't need to do anything yet.

· perform & parent ()

'Getter' function for member m\_jack\_parent Needed for external callbacks.

· const perform & parent () const

'Getter' function for member m\_jack\_parent, const version

bool is\_running () const

'Getter' function for member m jack running

• bool is\_master () const

'Getter' function for member m\_jack\_master

int get\_ppqn () const

'Getter' function for member m\_ppqn

• int get\_beat\_width () const

'Getter' function for member m\_beat\_width

void set\_beat\_width (int bw)

'Setter' function for member m\_beat\_width

int get\_beats\_per\_measure () const

'Getter' function for member m\_beats\_per\_measure

void set beats per measure (int bpm)

'Setter' function for member m\_beats\_per\_measure

• int get\_beats\_per\_minute () const

'Getter' function for member m\_beats\_per\_minute

void set\_beats\_per\_minute (int bpminute)

'Setter' function for member m\_beats\_per\_minute For the future, changing the BPM (beats/minute) internally.

• jack\_transport\_state\_t transport\_state () const

'Getter' function for member m\_jack\_transport\_state

• bool transport\_not\_starting () const

Returns true if the JACK transport state is not JackTransportStarting.

· bool init ()

Initializes JACK support.

· bool deinit ()

Tears down the JACK infrastructure.

• bool session event ()

Writes the MIDI file named "< jack session dir> -file.mid" using a midifile object, quits if told to by JACK, and can free the JACK session event.

• void start ()

If JACK is supported, starts the JACK transport.

· void stop ()

If JACK is supported, stops the JACK transport.

void position (bool state, midipulse tick=0)

If JACK is supported and running, sets the position of the transport to the new frame number, frame 0.

bool output (jack\_scratchpad &pad)

Performance output function for JACK, called by the perform function of the same name.

void set\_ppqn (int ppqn)

'Setter' function for member m\_ppqn For the future, changing the PPQN internally.

double get\_jack\_tick () const

'Getter' function for member m\_jack\_tick

const jack\_position\_t & get\_jack\_pos () const

'Getter' function for member m\_jack\_pos

- void toggle\_jack\_mode ()
- void set\_jack\_mode (bool mode)
- bool get\_jack\_mode () const

'Getter' function for member m\_toggle\_jack Seems misnamed.

• midipulse get\_jack\_stop\_tick () const

'Getter' function for member m\_jack\_stop\_tick

void set\_jack\_stop\_tick (long tick)

'Setter' function for member m\_jack\_stop\_tick

• jack\_nframes\_t jack\_frame\_rate () const

'Getter' function for member m\_jack\_frame\_rate

bool get\_follow\_transport () const

'Getter' function for member m\_follow\_transport

void set\_follow\_transport (bool aset)

'Setter' function for member m\_follow\_transport

void toggle\_follow\_transport ()

 ${\it 'Setter' function for member m\_follow\_transport}$ 

• bool toggle\_song\_start\_mode ()

'Setter' function for member parent().toggle\_song\_start\_mode()

bool song\_start\_mode () const

'Getter' function for member parent().song\_start\_mode()

· void set start from perfedit (bool start)

'Setter' function for member parent().start\_from\_perfedit()

jack\_client\_t \* client () const

'Getter' function for member m\_jack\_client

· const std::string & client\_name () const

'Getter' function for member m\_jack\_client\_name

const std::string & client\_uuid () const

'Getter' function for member m\_jack\_client\_uuid

#### **Private Member Functions**

void set\_jack\_running (bool flag)

'Setter' function for member m\_jack\_running

· double tick\_multiplier () const

Convenience function for internal use.

bool info\_message (const std::string &msg)

Common-code for console messages.

bool error\_message (const std::string &msg)

Common-code for error messages.

• jack client t \* client open (const std::string &clientname)

A more full-featured initialization for a JACK client, which is meant to be called by the init() function.

void get\_jack\_client\_info ()

Tries to obtain the best information on the JACK client and the UUID assigned to this client.

· void show statuses (unsigned bits)

Loops through the full set of JACK bits, showing the information for any bits that are set in the given parameter.

void show\_position (const jack\_position\_t &pos) const

Shows a one-line summary of a JACK position structure.

int sync (jack\_transport\_state\_t state=(jack\_transport\_state\_t)(-1))

A helper function for syncing up with JACK parameters.

· void set position (midipulse currenttick)

Provides the code that was effectively commented out in the perform::position\_jack() function.

### **Private Attributes**

· perform & m jack parent

Provides the perform object that needs this JACK assistant/scratchpad class.

jack\_client\_t \* m\_jack\_client

Provides a handle into JACK, so that the application, as a JACK client, can issue commands and retrieve status information from JACK.

std::string m\_jack\_client\_name

A new member to hold the actual name of the client assigned by JACK.

• std::string m\_jack\_client\_uuid

A new member to hold the actual UUID of the client assigned by JACK.

jack\_nframes\_t m\_jack\_frame\_current

Holds the current frame number obtained from JACK transport, via a call to jack\_get\_current\_transport\_frame().

· jack nframes t m jack frame last

Holds the last frame number we got from JACK, so that progress can be tracked.

jack\_position\_t m\_jack\_pos

Provides positioning information on JACK playback.

jack\_transport\_state\_t m\_jack\_transport\_state

Holds the JACK transport state.

jack\_transport\_state\_t m\_jack\_transport\_state\_last

Holds the last JACK transport state.

double m\_jack\_tick

The tick/pulse value derived from the current frame number, the ticks/beat value, the beats/minute value, and the frame rate.

jack\_session\_event\_t \* m\_jsession\_ev

Provides a kind of handle to the JACK session manager.

bool m\_jack\_running

Indicates if JACK Sync has been enabled successfully.

bool m\_jack\_master

Indicates if JACK Sync has been enabled successfully, with the application running as JACK Master.

jack\_nframes\_t m\_jack\_frame\_rate

Holds the current frame rate.

• bool m\_toggle\_jack

Ostensibly a toggle, the functions that access this member are called "jack mode" functions.

midipulse m\_jack\_stop\_tick

Used in jack\_process\_callback() to reposition when JACK transport is not rolling or starting.

bool m\_follow\_transport

TBD.

• int m\_ppqn

Holds the global PPQN value for the Sequencer64 session.

int m\_beats\_per\_measure

Holds the song's beats/measure value for using in setting JACK position.

int m\_beat\_width

Holds the song's beat width value (denominator of the time signature) for using in setting JACK position.

• int m\_beats\_per\_minute

Holds the song's beats/minute (BPM) value for using in setting JACK position.

# **Static Private Attributes**

static jack\_status\_pair\_t sm\_status\_pairs []

Pairs the JACK status bits with human-readable descriptions of each one.

#### **Friends**

- int jack\_process\_callback (jack\_nframes\_t nframes, void \*arg)
- void jack\_shutdown\_callback (void \*arg)

This callback is to shut down JACK by clearing the jack\_assistant :: m\_jack\_running flag.

int jack\_sync\_callback (jack\_transport\_state\_t state, jack\_position\_t \*pos, void \*arg)

Global functions for JACK support and JACK sessions.

void jack\_timebase\_callback (jack\_transport\_state\_t state, jack\_nframes\_t nframes, jack\_position\_t \*pos, int new\_pos, void \*arg)

The JACK timebase function defined here sets the JACK position structure.

void jack\_session\_callback (jack\_session\_event\_t \*ev, void \*arg)

Set the m\_jsession\_ev (event) value of the perform object.

# 13.22.1 Constructor & Destructor Documentation

### 13.22.1.1 jack\_assistant()

```
seq64::jack_assistant::jack_assistant (
    perform & parent,
    int bpminute = SEQ64_DEFAULT_BPM,
    int ppqn = SEQ64_USE_DEFAULT_PPQN,
    int bpm = SEQ64_DEFAULT_BEATS_PER_MEASURE,
    int beatwidth = SEQ64_DEFAULT_BEAT_WIDTH )
```

Note that the perform object currently calls jack\_assistant::init(), but that call could be made here instead.

#### **Parameters**

parent	Provides a reference to the main perform object that needs to control JACK event.
bpminute	The beats/minute to set up JACK to use (applies to Master setup).
ppqn	The parts-per-quarter-note setting in force for the present tune.
bpm	The beats/measure (time signature numerator) in force for the present tune.
beatwidth	The beat-width (time signature denominator) in force for the present tune.

```
13.22.1.2 \sim jack_assistant()
```

```
seq64::jack_assistant::~jack_assistant ( )
```

The perform object currently calls jack\_assistant::deinit(), but that call could be made here instead.

# 13.22.2 Member Function Documentation

```
13.22.2.1 parent() [1/2]

perform& seq64::jack_assistant::parent ( ) [inline]

13.22.2.2 parent() [2/2]

const perform& seq64::jack_assistant::parent ( ) const [inline]

13.22.2.3 is_running()

bool seq64::jack_assistant::is_running ( ) const [inline]

13.22.2.4 is_master()

bool seq64::jack_assistant::is_master ( ) const [inline]
```

```
13.22.2.5 get_ppqn()
int seq64::jack_assistant::get_ppqn ( ) const [inline]
13.22.2.6 get_beat_width()
int seq64::jack_assistant::get_beat_width ( ) const [inline]
13.22.2.7 set_beat_width()
void seq64::jack_assistant::set_beat_width (
             int bw ) [inline]
Parameters
      Provides the beat-width (denominator of the time signature) value to set.
13.22.2.8 get_beats_per_measure()
int seq64::jack_assistant::get_beats_per_measure ( ) const [inline]
13.22.2.9 set_beats_per_measure()
void seq64::jack_assistant::set_beats_per_measure (
             int bpm ) [inline]
Parameters
        Provides the beats/measure (numerator of the time signature) value to set.
 bpm
13.22.2.10 get_beats_per_minute()
int seq64::jack_assistant::get_beats_per_minute ( ) const [inline]
13.22.2.11 set_beats_per_minute()
```

We should consider adding validation. However, <a href="mailto:perform::set\_beats\_per\_minute">perform::set\_beats\_per\_minute</a>() does validate already.

# **Parameters**

bpminute | Provides the beats/minute value to set.

void seq64::jack\_assistant::set\_beats\_per\_minute (
 int bpminute ) [inline]

# 13.22.2.12 transport\_state()

```
jack_transport_state_t seq64::jack_assistant::transport_state ( ) const [inline]

13.22.2.13 transport_not_starting()

bool seq64::jack_assistant::transport_not_starting ( ) const [inline]

13.22.2.14 init()
```

bool seq64::jack\_assistant::init ( )

Then we become a new client of the JACK server.

A sync callback is needed for polling of slow-sync clients. But seq24/sequencer64 are not slow-sync clients. We don't really need to be a slow-sync client, as far as we can tell. We can't get JACK working exactly the way it does in seq24 without the callback in place. Plus, it does things important to the setup of JACK. So now this setup is permanent.

Jack transport settings:

```
There are three settings: On, Master, and Master Conditional. Currently, they can all be selected in the user-interface's File / Options / JACK/LASH page. We really want only the proper combinations to be set, for clarity (the user-interface now takes care of this. We need to initialize if any of them are set, and the rc_settings::with_jack() function tells us that.
```

#### jack\_set\_process\_callback() patch:

```
Implemented first patch from freddix/seq24 GitHub project, to fix JACK transport. One line of code. Well, we added some error-checking. :-) Found some old notes on the Web the this patch really only works (to prevent seq24 freeze) if seq24 is set as JACK Master, or if another client application, such as Qtractor, is running as JACK Master (and then seq24 will apparently follow it).
```

STAZED: The call to jack\_timebase\_callback() to supply jack with BBT, etc would occasionally fail when the \*pos information had zero or some garbage in the pos.frame\_rate variable. This would occur when there was a rapid change of frame position by another client... i.e. gjackctl. From the jack API:

"pos address of the position structure for the next cycle; pos->frame will be its frame number. If new\_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase\_callback's task is to update the extended information here."

The "If TRUE" line seems to be the issue. It seems that qjackctl does not always set pos.frame\_rate so we get garbage and some strange BBT calculations that display in qjackctl. So we need to set it here and just use m\_\iff jack\_frame\_rate for calculations instead of pos.frame\_rate.

#### Returns

Returns true if JACK is now considered to be running (or if it was already running.)

#### 13.22.2.15 deinit()

```
bool seq64::jack_assistant::deinit ( )
```

### Returns

Returns the value of m\_jack\_running, which should be false.

### 13.22.2.16 session\_event()

```
bool seq64::jack_assistant::session_event ( )
```

ca 2015-07-24 Just a note: The OMA (OpenMandrivaAssociation) patch was already applied to seq24 v.0.9.2. It put quotes around the –file argument. However, the –file option doesn't work, so let's change that line.

```
sequencer64 --file \"${SESSION_DIR}file.mid\" --jack_session_uuid
```

Why are we using a Glib::ustring here? Convenience. But with C++11, we could use a lexical\_cast<>. No more ustring, baby! It doesn't really matter; this function can call Gtk::Main::quit(), via the parent's gui().quit() function.

#### Returns

Always returns false.

#### 13.22.2.17 start()

```
void seq64::jack_assistant::start ( )
```

This function assumes that m\_jack\_client is not null, if m\_jack\_running is true.

Found this note in the Hydrogen code:

```
When jack_transport_start() is called, it takes effect from the next processing cycle. The location info from the timebase_master, if there is one, will not be available until the _next_ next cycle. The code must therefore wait one cycle before syncing up with timebase_master.
```

### 13.22.2.18 stop()

```
void seq64::jack_assistant::stop ( )
```

This function assumes that m\_jack\_client is not null, if m\_jack\_running is true.

#### 13.22.2.19 position()

```
void seq64::jack_assistant::position (
    bool songmode,
    midipulse tick = 0 )
```

This new position takes effect in two process cycles. If there are slow-sync clients and the transport is already rolling, it will enter the JackTransportStarting state and begin invoking their sync\_callbacks until ready. This function is realtime-safe.

```
http://jackaudio.org/files/docs/html/transport-design.html
```

This position() function is called via perform::position\_jack() in the mainwnd, perfedit, perfroll, and seqroll graphical user-interface support objects.

The code that was disabled sets the current tick to 0 or, if state was true, to the leftmost tick (which is probably the position of the L marker). The current tick is then converted to a frame number, and then we locate the transport to that position. We're going to enable this code, but make it dependent on a new boolean parameter that defaults to false, in anticipation of trying it out later.

#### Stazed:

```
The jack_frame calculation is all that is needed to change JACK position The BBT calc can be sent but will be overridden by the first call to jack_timebase_callback() of any Master set. If no Master is set, then the BBT will display the new position but will not change even if the transport is rolling. There is no need to send BBT on position change - the fact that the function jack_transport_locate() exists and only uses the frame position is proof that BBT is not needed! Upon further reflection, why not send BBT? Because other programs do not... let's follow convention. The below calculation for jack_transport_locate(), works, is simpler and does not send BBT. The calculation for jack_transport_reposition() will be commented out again. The BBT call to jack_BBT_position() is not necessary to change jack position!
```

Note that there are potentially a couple of divide-by-zero opportunities in this function.

#### **Parameters**

songmode	True if the caller wants to position while in Song mode.
tick	If using Song mode for this call then this value is set as the "current tick" value. If it's value is bad (SEQ64_NULL_MIDIPULSE), then this parameter is set to 0 before being used.

#### 13.22.2.20 output()

This code comes from perform::output\_func() from seq24.

#### Note

Follow up on this note found "out there": "Maybe I'm wrong but if I understood correctly, recent jack1 transport no longer goes into Jack\_Transport\_Starting state before going to Jack\_Transport\_Rolling (this was deliberately dropped), but seq24 currently needs this to start off with JACK transport." On the other hand, some people have no issues. This may have been due to the lack of m\_jack\_pos initialization.

#### Stazed:

Another note about JACK.... If another JACK client is supplying tempo/BBT info that is different from seq42 (as Master), the perfroll grid will be incorrect. Perfroll uses internal temp/BBT and cannot update on the fly. Even if seq42 could support tempo/BBT changes, all info would have to be available before the transport start, to work. For this reason, the tempo/BBT info will be plugged from the seq42 internal settings here... always. This is the method used by probably all other JACK clients with some sort of time-line. The JACK API indicates that BBT is optional and AFIK, other sequencers only use frame & frame\_rate from JACK for internal calculations. The tempo and BBT info is always internal. Also, if there is no Master set, then we would need to plug it here to follow the JACK frame anyways.

#### **Parameters**

pad

Provide a JACK scratchpad for sharing certain items between the perform object and the jack\_assistant object.

#### Returns

Returns true if JACK is running.

### 13.22.2.21 set\_ppqn()

We should consider adding validation. But it is used by perform.

### Parameters

ppqn Provides the PPQN value to set.

### 13.22.2.22 get\_jack\_tick()

```
double seq64::jack_assistant::get_jack_tick ( ) const [inline]
```

# 13.22.2.23 get\_jack\_pos()

```
13.22.2.24 toggle_jack_mode()
void seq64::jack_assistant::toggle_jack_mode ( ) [inline]
13.22.2.25 set_jack_mode()
void seq64::jack_assistant::set_jack_mode (
             bool mode ) [inline]
13.22.2.26 get_jack_mode()
bool seq64::jack_assistant::get_jack_mode ( ) const [inline]
13.22.2.27 get_jack_stop_tick()
midipulse seq64::jack_assistant::get_jack_stop_tick ( ) const [inline]
13.22.2.28 set_jack_stop_tick()
void seq64::jack_assistant::set_jack_stop_tick (
             long tick ) [inline]
13.22.2.29 jack_frame_rate()
jack_nframes_t seq64::jack_assistant::jack_frame_rate ( ) const [inline]
13.22.2.30 get_follow_transport()
bool seq64::jack_assistant::get_follow_transport ( ) const [inline]
13.22.2.31 set_follow_transport()
void seq64::jack_assistant::set_follow_transport (
             bool aset ) [inline]
13.22.2.32 toggle_follow_transport()
void seq64::jack_assistant::toggle_follow_transport ( ) [inline]
13.22.2.33 toggle_song_start_mode()
bool seq64::jack_assistant::toggle_song_start_mode ( )
```

```
13.22.2.34 song_start_mode()
bool seq64::jack_assistant::song_start_mode ( ) const
13.22.2.35 set_start_from_perfedit()
void seq64::jack_assistant::set_start_from_perfedit (
             bool start )
13.22.2.36 client()
jack_client_t* seq64::jack_assistant::client ( ) const [inline]
13.22.2.37 client_name()
const std::string& seq64::jack_assistant::client_name ( ) const [inline]
13.22.2.38 client_uuid()
const std::string& seq64::jack_assistant::client_uuid ( ) const [inline]
13.22.2.39 set_jack_running()
void seq64::jack_assistant::set_jack_running (
              bool flag ) [inline], [private]
Parameters
 flag
       Provides the is-running value to set.
13.22.2.40 tick_multiplier()
double seq64::jack_assistant::tick_multiplier ( ) const [inline], [private]
Should we change 4.0 to a member value? What does it mean?
Returns
     Returns the multiplier to convert a JACK tick value according to the PPQN, ticks/beat, and beat-type settings.
13.22.2.41 info_message()
bool seq64::jack_assistant::info_message (
              const std::string & msg ) [private]
Adds markers and a newline.
```

msg The message to print, sans the newline.

#### Returns

Returns true.

### 13.22.2.42 error\_message()

Adds markers, and sets m\_jack\_running to false.

#### **Parameters**

msg The message to print, sans the newline.

#### Returns

Returns false for convenience/brevity in setting function return values.

# 13.22.2.43 client\_open()

### Status bits for jack\_status\_t return pointer:

JackNameNotUnique means that the client name was not unique. With JackUseExactName, this is fatal. Otherwise, the name was modified by appending a dash and a two-digit number in the range "-01" to "-99". The jack\_get\_client\_name() function returns the exact string used. If the specified client\_name plus these extra characters would be too long, the open fails instead.

JackServerStarted means that the JACK server was started as a result of this operation. Otherwise, it was running already. In either case the caller is now connected to jackd, so there is no race condition. When the server shuts down, the client will find out.

# JackOpenOptions:

```
JackSessionID | JackServerName | JackNoStartServer | JackUseExactName
Only the first is used at present.
```

# clientname

Provides the name of the client, used in the call to jack\_client\_open(). By default, this name is the macro SEQ64\_PACKAGE (i.e. "sequencer64"). The name scope is local to each server. Unless forbidden by the JackUseExactName option, the server will modify this name to create a unique variant, if needed.

#### Returns

Returns a pointer to the JACK client if JACK has opened the client connection successfully. Otherwise, a null pointer is returned.

```
13.22.2.44 get_jack_client_info()
```

```
void seq64::jack_assistant::get_jack_client_info ( ) [private]
```

Sets m\_jack\_client\_name and m\_jack\_client\_info as side-effects.

#### 13.22.2.45 show\_statuses()

For reference, here are the enumeration values from /usr/include/jack/types.h:

```
        JackFailure
        = 0x01

        JackInvalidOption
        = 0x02

        JackNameNotUnique
        = 0x04

        JackServerStarted
        = 0x08

        JackServerFailed
        = 0x10

        JackServerError
        = 0x20

        JackNoSuchClient
        = 0x40

        JackLoadFailure
        = 0x80

        JackInitFailure
        = 0x200

        JackShmFailure
        = 0x200

        JackBackendError
        = 0x800

        JackClientZombie
        = 0x1000
```

### **Parameters**

bits The mask of the bits to be shown in the output.

# 13.22.2.46 show\_position()

This function is meant for experimenting and learning.

The fields of this structure are as follows. Only the fields we care about are shown.

```
jack_nframes_t frame_rate: current frame rate (per second)
jack_nframes_t frame: frame number, always present
jack_position_bits_t valid: which other fields are valid
JackPositionBBT:
   int32_t
                     bar: current bar
beat: current beat-within-bar
tick: current tick-within-beat
    int32_t
   int32_t
double
                     tick:
bar_start_tick
                                       current tick-within-beat
                     beats_per_bar: time signature "numerator"
    float
                     beat_type: time signature "denominator" ticks_per_beat beats_per_minute
    float
    double
    double
JackBBTFrameOffset:
    jack_nframes_t
                       bbt_offset;
                                      frame offset for the BBT fields
Only the most "important" and time-varying fields are shown. The format
output is brief and inscrutable unless you read this format example:
    nnnnn frame B:B:T N/D TPB BPM BBT
                      1 1 1
                    | | | | ------ bbt_offset (frame), even if invalid
                             ----- beats_per_minute
                     iii
                          ----- ticks_per_beat (PPQN * 10?)
                 | | -----beat_type (denominator)
                      -----beats_per_bar (numerator)
                  ----- bar : beat : tick
             ----- frame (number)
                 ----- the "valid" bits
The "valid" field is shown as bits in the same bit order as shown here, but
represented as a five-character string, "nnnnn", n = 0 or 1:
    JackVideoFrameOffset = 0x100
    JackAudioVideoRatio = 0x080
    JackBBTFrameOffset = 0x040
    JackPositionTimecode = 0x020
    JackPositionBBT
                        = 0x010
We care most about nnnnn = "00101" in our experiments (the most common
output will be "00001"). And we don't worry about non-integer
measurements... we truncate them to integers. Change the output format if
you want to play with non-Western timings.
```

pos The JACK position structure to dump.

# 13.22.2.47 sync()

Sequencer64 is not a slow-sync client (and Stazed support doesn't use it), so that callback is not really needed, but we probably need this sub-function here to start out with the right values for interacting with JACK.

Note the call to jack\_transport\_query(). This call is *not* is seq24, but seems to be needed in sequencer64 because we put m\_jack\_pos in the initializer list, which sets all its fields to 0. Seq24 accesses m\_jack\_pos before it ever gets set, but its fields have values. These values are bogus, but are consistent from run to run on my computer, and allow seq24 to follow another JACK Master, on some computers. It explains why people had different experiences with JACK sync.

If we explicity call jack\_transport\_query() here, without changing the *state* parameter, then sequencer64 also can follow another JACK Master. (CURRENTLY BUGGY!)

Note that we should consider massaging the following jack\_position\_t members to set them to 0 (or 0.0) if less than 1.0 or 0.5:

```
- bar_start_tick
- ticks_per_beat
- beats_per_minute
- frame_time
- next_time
- audio_frames_per_video_frame
```

Also, why does bbt offset start at 2128362496?

#### **Parameters**

```
state The JACK transport state to be set.
```

#### 13.22.2.48 set\_position()

We might be able to use it in other functions.

Computing the BBT information from the frame number is relatively simple here, but would become complex if we supported tempo or time signature changes at specific locations in the transport timeline.

```
ticks * 10 = jack ticks;
jack ticks / ticks per beat = num beats;
num beats / beats per minute = num minutes
num minutes * 60 = num seconds
num secords * frame_rate = frame
```

## **Parameters**

currenttick Provides the current position to be set.

### 13.22.3 Friends And Related Function Documentation

#### 13.22.3.1 jack process callback

```
int jack_process_callback (
          jack_nframes_t nframes,
          void * arg ) [friend]
```

### 13.22.3.2 jack\_shutdown\_callback

```
void jack_shutdown_callback ( \mbox{void} \ * \ arg \ ) \ \ [\mbox{friend}]
```

#### **Parameters**

arg Points to the jack\_assistant in charge of JACK support for the perform object.

### 13.22.3.3 jack\_sync\_callback

```
int jack_sync_callback (
          jack_transport_state_t state,
          jack_position_t * pos,
          void * arg ) [friend]
```

This JACK synchronization callback informs the specified perform object of the current state and parameters of JACK.

The transport state will be:

- JackTransportStopped when a new position is requested.
- JackTransportStarting when the transport is waiting to start.
- JackTransportRolling when the timeout has expired, and the position is now a moving target.

This is the slow-sync callback, which the stazed code replaces with jack\_process\_callback().

# Parameters

state	The JACK Transport state.
pos	The JACK position value.
arg	The pointer to the jack_assistant object. Currently not checked for nullity, nor dynamic-casted.

#### Returns

Returns 1 if the function works, and 0 if something was wrong.

### 13.22.3.4 jack\_timebase\_callback

```
void jack_timebase_callback (
          jack_transport_state_t state,
          jack_nframes_t nframes,
          jack_position_t * pos,
          int new_pos,
          void * arg ) [friend]
```

The original version of the function worked properly with Hydrogen, but not with Klick. The new code seems to work with both. More testing and clarification is needed. This new code was "discovered" in the source-code for the "SooperLooper" project:

http://essej.net/sooperlooper/

The first difference with the new code is that it handles the case where the JACK position is moved (new\_pos == true). If this is true, and the JackPositionBBT bit is off in pos->valid, then the new BBT value is set.

The seconds set of differences are in the "else" clause. In the new code, it is very simple: calculate the new tick value, back it off by the number of ticks in a beat, and perhaps go to the first beat of the next bar.

In the old code (complex!), the simple BBT adjustment is always made. This changes (perhaps) the beats\_per\_bar, beat\_type, etc. We need to make these settings use the actual global values for beats set for Sequencer64. Then, if transitioning from JackTransportStarting to JackTransportRolling (instead of checking new\_pos!), the BBT values (bar, beat, and tick) are finally adjusted. Here are the steps, with old and new steps noted:

- -# Calculate the "delta" ticks based on the current frame, the ticks\_per\_beat, the beats\_per\_minute, and the frame\_rate. The old code saves this in a local, the new code assigns it to pos->tick.
- -# Old code: save this delta as a positive value.
- -# Figure out the settings and modify bar, beat, tick, and bar\_start\_tick. The old and new code seem to have the same intent, but it seems like the new code is faster and also correct.
  - Old code: Calculations are made by division and mod operations.
  - New code: Calculations are made by increments and decrements in a while loop.

#### Stazed:

The call to jack\_timebase\_callback() to supply JACK with BBT, etc. would occasionally fail when the pos information had zero or some garbage in the pos.frame\_rate variable. This would occur when there was a rapid change of frame position by another client... i.e. qjackctl. From the JACK API:

pos address of the position structure for the next cycle; pos->frame will be its frame number. If new\_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase\_callback's task is to update the extended information here."

The "If TRUE" line seems to be the issue. It seems that qjackctl does not always set pos.frame\_rate so we get garbage and some strange BBT calculations that display in qjackctl. So we need to set it here and just use m\_jack\_frame\_rate for calculations instead of pos.frame\_rate.

#### **Parameters**

state	Indicates the current state of JACK transport.
nframes	The number of JACK frames in the current time period.
pos	Provides the position structure to be filled in, the address of the position structure for the next cycle; pos->frame will be its frame number. If new_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase_callback's task is to update the extended information here.
new_pos	TRUE (non-zero) for a newly requested pos, or for the first cycle after the timebase_callback is defined. This is usually 0 in Sequencer64 at present, and 1 if one, say, presses "rewind" in qjackctl.
arg	Provides the jack_assistant pointer, currently unchecked for nullity.

### 13.22.3.5 jack\_session\_callback

```
void jack_session_callback (
          jack_session_event_t * ev,
          void * arg ) [friend]
```

Glib is then used to connect in perform::jack\_session\_event(). However, the perform object's GUI-support interface is used instead of the following, so that the libseq64 library can be independent of a specific GUI framework:

```
Glib::signal_idle().
    connect(sigc::mem_fun(*jack, &jack_assistant::session_event));
```

### **Parameters**

ev	The JACK event to be set.
arg	The pointer to the jack_assistant object. Currently not checked for nullity.

# 13.22.4 Field Documentation

#### 13.22.4.1 sm\_status\_pairs

```
jack_status_pair_t seq64::jack_assistant::sm_status_pairs [static], [private]
```

Provides a list of JACK status bits, and a brief string to explain the status bit.

Terminated by a 0 value and an empty string.

```
13.22.4.2 m_jack_parent
```

```
perform& seq64::jack_assistant::m_jack_parent [private]
```

### 13.22.4.3 m\_jack\_client

```
jack_client_t* seq64::jack_assistant::m_jack_client [private]
```

# 13.22.4.4 m\_jack\_client\_name

```
std::string seq64::jack_assistant::m_jack_client_name [private]
```

We might show this in the user-interface at some point.

### 13.22.4.5 m\_jack\_client\_uuid

```
std::string seq64::jack_assistant::m_jack_client_uuid [private]
```

We might show this in the user-interface at some point.

```
13.22.4.6 m_jack_frame_current
```

```
jack_nframes_t seq64::jack_assistant::m_jack_frame_current [private]
```

# 13.22.4.7 m\_jack\_frame\_last

```
jack_nframes_t seq64::jack_assistant::m_jack_frame_last [private]
```

Also used in incrementing m\_jack\_tick.

### 13.22.4.8 m\_jack\_pos

```
jack_position_t seq64::jack_assistant::m_jack_pos [private]
```

This structure is filled via a call to jack\_transport\_query(). It holds, among other items, the frame rate (often 48000), the ticks/beat, and the beats/minute.

### 13.22.4.9 m\_jack\_transport\_state

```
jack_transport_state_t seq64::jack_assistant::m_jack_transport_state [private]
```

Common values are JackTransportStopped, JackTransportRolling, and JackTransportLooping.

### 13.22.4.10 m\_jack\_transport\_state\_last

```
jack_transport_state_t seq64::jack_assistant::m_jack_transport_state_last [private]
```

### 13.22.4.11 m\_jack\_tick

```
double seq64::jack_assistant::m_jack_tick [private]
```

## 13.22.4.12 m\_jsession\_ev

```
jack_session_event_t* seq64::jack_assistant::m_jsession_ev [private]
```

Used in the session\_event() function.

### 13.22.4.13 m\_jack\_running

```
bool seq64::jack_assistant::m_jack_running [private]
```

### 13.22.4.14 m\_jack\_master

```
bool seq64::jack_assistant::m_jack_master [private]
```

```
13.22.4.15 m_jack_frame_rate
```

```
jack_nframes_t seq64::jack_assistant::m_jack_frame_rate [private]
```

Just in case. QJackCtl does not always set pos.frame\_rate, so we get garbage and some strange BBT calculations displayed in qjackctl.

# 13.22.4.16 m\_toggle\_jack

```
bool seq64::jack_assistant::m_toggle_jack [private]
```

### 13.22.4.17 m\_jack\_stop\_tick

```
midipulse seq64::jack_assistant::m_jack_stop_tick [private]
```

Repositions the transport marker.

### 13.22.4.18 m\_follow\_transport

```
bool seq64::jack_assistant::m_follow_transport [private]
```

# 13.22.4.19 m\_ppqn

```
int seq64::jack_assistant::m_ppqn [private]
```

It is used for calculating ticks/beat (pulses/beat) and for setting the tick position.

# 13.22.4.20 m\_beats\_per\_measure

```
int seq64::jack_assistant::m_beats_per_measure [private]
```

# 13.22.4.21 m\_beat\_width

```
int seq64::jack_assistant::m_beat_width [private]
```

# 13.22.4.22 m\_beats\_per\_minute

```
int seq64::jack_assistant::m_beats_per_minute [private]
```

# 13.23 seq64::jack\_scratchpad Class Reference

Provide a temporary structure for passing data and results between a perform and jack\_assistant object.

## **Data Fields**

· double js\_current\_tick

Holds current location.

double js\_total\_tick

Current location ignoring L/R.

· double is clock tick

Identical to js\_total\_tick.

bool js\_jack\_stopped

Flags perform::inner\_stop().

bool js\_dumping

Non-JACK playback in progress?

bool js\_init\_clock

We now have a good JACK lock.

bool js\_looping

seqedit loop button is active.

bool js\_playback\_mode

Song mode (versus live mode).

· double js\_ticks\_converted

Keeps track of ...?

· double js\_ticks\_delta

Minor difference in tick.

double js\_ticks\_converted\_last

Keeps track of position?

long js\_delta\_tick\_frac

More precision for seq24 0.9.3.

# 13.23.1 Detailed Description

The jack\_assistant class already has access to the members of perform, but it needs access to and modification of "local" variables in perform::output\_func(). This scratchpad is useful even if JACK support is not enabled.

## 13.23.2 Field Documentation

```
13.23.2.1 js_current_tick
```

```

```

# 13.24 seq64::jack\_status\_pair\_t Struct Reference

long seq64::jack\_scratchpad::js\_delta\_tick\_frac

Provides an internal type to make it easier to display a specific and accurate human-readable message when a JACK operation fails.

## **Data Fields**

unsigned jf\_bit

Holds one of the bit-values from jack\_status\_t, which is defined as an "enum JackStatus" type.

std::string jf\_meaning

Holds a textual description of the corresponding status bit.

#### 13.24.1 Field Documentation

```
13.24.1.1 jf_bit
unsigned seq64::jack_status_pair_t::jf_bit
13.24.1.2 jf_meaning
```

# 13.25 seq64::keybindentry Class Reference

std::string seq64::jack\_status\_pair\_t::jf\_meaning

Class for management of application key-bindings.

Inherits Entry.

## **Public Member Functions**

• keybindentry (type t, unsigned int \*location\_to\_write=nullptr, perform \*p=nullptr, long s=0)

This constructor initializes the member with values dependent on the value type provided in the first parameter.

• void set (unsigned int val)

Gets the key name from the integer value; if there is one, then it is printed into a temporary buffer, otherwise the value is printed into that buffer as is.

virtual bool on\_key\_press\_event (GdkEventKey \*event)

Handles a key press by calling set() with the event's key value.

# **Private Types**

enum type { location, events, groups }

Provides the type of keybindings that can be made.

# **Private Attributes**

unsigned int \* m\_key

Points to the value of the key that is part of this key-binding.

• type m\_type

Stores the type of key-binding.

• perform \* m\_perf

Stores an optional pointer to a perform object.

• long m\_slot

Provides an index into a set of group-keys or event-keys.

# **Friends**

• class options

## 13.25.1 Member Enumeration Documentation

```
13.25.1.1 type
```

```
enum seq64::keybindentry::type [private]
```

#### Enumerator

location	Used for handling a keystroke made while a keyboard-options field is active, for selecting a key via the keyboard, and binding to pattern/sequence boxes, we think. It is used in the options class to associate a key with the binding.
events	Used for binding to events.
groups	Used for binding to groups.

# 13.25.2 Constructor & Destructor Documentation

# 13.25.2.1 keybindentry()

**Usage** In options, a pointer to a new key-binding entry is managed by calling keybindentry (keybindentry ∴:location, &perf->keyname).

#### **Parameters**

t	Provides the type of key-binding: location, events, or groups.
location_to_write	The location that holds the value of the key associated with the key-binding. The default value of this parameter is the null pointer.
р	Points to the performance object used with this key-binding. The default value of this parameter is the null pointer.
S	Provides the slot value for this key-binding. The default value of this parameter is zero Doxygen

# 13.25.3 Member Function Documentation

Then we call set\_text(buf). The set\_width\_char() function is then called.

```
13.25.3.2 on_key_press_event()
```

```
bool seq64::keybindentry::on_key_press_event (
    GdkEventKey * event ) [virtual]
```

This value is used to set the event or key depending on the value of m\_type.

#### **Parameters**

event   Provides the key-press event.
---------------------------------------

#### Returns

Returns the result of the call to Entry::on\_key\_press\_event().

# 13.25.4 Friends And Related Function Documentation

```
13.25.4.1 options
```

```
friend class options [friend]
```

# 13.25.5 Field Documentation

```
13.25.5.1 m_key
```

```
unsigned int* seq64::keybindentry::m_key [private]
```

Not yet sure by the address of this key value is needed. It can be a null pointer, as well.

```
13.25.5.2 m_type
```

```
type seq64::keybindentry::m_type [private]
```

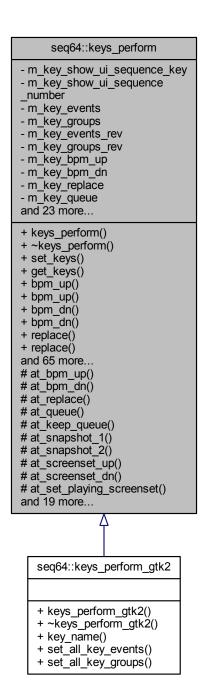

# 13.25.5.3 m\_perf

```
perform* seq64::keybindentry::m_perf [private]
```

This class supports the performance mode.

Inheritance diagram for seq64::keys\_perform:

## **Public Member Functions**

• keys\_perform ()

This construction initializes a vast number of member variables, some of them public!

virtual ∼keys\_perform ()

The destructor sets some running flags to false, signals this condition, then joins the input and output threads if the were launched.

void set\_keys (const keys\_perform\_transfer &kpt)

Copies fields from the transfer structure in this object.

void get\_keys (keys\_perform\_transfer &kpt)

Copies fields from this object into the transfer structure.

unsigned int bpm\_up () const

'Getter' function for member m\_key\_bpm\_up

void bpm up (unsigned int x)

'Setter' function for member m\_key\_bpm\_up

unsigned int bpm\_dn () const

'Getter' function for member m\_key\_bpm\_dn

void bpm dn (unsigned int x)

'Setter' function for member m\_key\_bpm\_dn

unsigned int replace () const

'Getter' function for member m\_key\_replace

void replace (unsigned int x)

'Setter' function for member m\_key\_replace

· unsigned int queue () const

'Getter' function for member m key queue

void show\_ui\_sequence\_key (bool flag)

'Setter' function for member m\_key\_show\_ui\_sequency\_key

bool show\_ui\_sequence\_number () const

'Getter' function for member m\_key\_show\_ui\_sequence\_number

· void show ui sequence number (bool flag)

'Setter' function for member m\_key\_show\_ui\_sequence\_key

• SlotMap & get\_key\_events ()

'Getter' function for member m\_key\_events

SlotMap & get\_key\_groups ()

'Getter' function for member m\_key\_groups

RevSlotMap & get\_key\_events\_rev ()

'Getter' function for member m\_key\_events\_rev

RevSlotMap & get\_key\_groups\_rev ()

'Getter' function for member m\_key\_groups\_rev

unsigned int lookup\_keyevent\_key (long seqnum)

'Getter' function for member m\_key\_events\_rev[seqnum];

long lookup\_keyevent\_seq (unsigned int keycode)

'Getter' function for member m key events rev[keycode];

unsigned int lookup\_keygroup\_key (long groupnum)

'Getter' function for member m\_key\_events\_rev[groupnum];

long lookup\_keygroup\_group (unsigned int keycode)

'Getter' function for member m\_key\_events\_rev[keycode];

· virtual std::string key\_name (unsigned int key) const

Obtains the name of the key.

virtual void set\_all\_key\_events ()

Provides base class functionality.

virtual void set all key groups ()

Provides base class functionality.

void set key event (unsigned int keycode, long sequence slot)

At construction time, this function sets up one keycode and one event slot.

void set\_key\_group (unsigned int keycode, long group\_slot)

At construction time, this function sets up one keycode and one group slot.

# **Protected Types**

typedef std::map< unsigned int, long > SlotMap

This typedef defines a map in which the key is the keycode, that is, the integer value of a keystroke, and the value is the pattern/sequence number or slot.

typedef std::map< long, unsigned int > RevSlotMap

This typedef is like SlotMap, but used for lookup in the other direction.

#### **Protected Member Functions**

unsigned int \* at\_bpm\_up ()

The following are tricky ways to get at address of the key and group operation values so that we don't directly expose the members to manipulation.

unsigned int \* at\_bpm\_dn ()

'Getter' function for member m\_key\_bpm\_dn

unsigned int \* at\_replace ()

'Getter' function for member m\_key\_replace

• unsigned int \* at\_queue ()

'Getter' function for member m\_key\_queue

unsigned int \* at\_keep\_queue ()

'Getter' function for member m\_key\_keep\_queue

unsigned int \* at snapshot 1 ()

'Getter' function for member m\_key\_snapshot\_1

unsigned int \* at\_snapshot\_2 ()

```
'Getter' function for member m_key_snapshot_2
unsigned int * at_screenset_up ()
      'Getter' function for member m_key_screenset_up
unsigned int * at_screenset_dn ()
      'Getter' function for member m_key_screenset_dn

    unsigned int * at_set_playing_screenset ()

      'Getter' function for member m_key_playing_screenset
unsigned int * at_group_on ()
      'Getter' function for member m_key_group_on
unsigned int * at_group_off ()
      'Getter' function for member m_key_group_off

    unsigned int * at group learn ()

      'Getter' function for member m_key_group_learn
• unsigned int * at start ()
      'Getter' function for member m key start
• unsigned int * at_pause ()
      'Getter' function for member m_key_pause
unsigned int * at_song_mode ()
      'Getter' function for member m_key_song_mode
unsigned int * at_toggle_jack ()
      'Getter' function for member m_key_toggle_jack
unsigned int * at_menu_mode ()
      'Getter' function for member m_key_menu_mode

    unsigned int * at_follow_transport ()

      'Getter' function for member m_key_follow_transport
unsigned int * at_fast_forward ()
      'Getter' function for member m_key_fast_forward
unsigned int * at_rewind ()
      'Getter' function for member m_key_rewind
unsigned int * at_pointer_position ()
      'Getter' function for member m_key_pointer_position
• unsigned int * at_toggle_mutes ()
      'Getter' function for member m_key_toggle_mutes
unsigned int * at_tap_bpm ()
      'Getter' function for member m_key_tap_bpm
unsigned int * at_pattern_edit ()
      'Getter' function for member m key pattern edit
unsigned int * at_event_edit ()
      'Getter' function for member m key event edit
unsigned int * at_stop ()
      'Getter' function for member m_key_stop
bool * at_show_ui_sequence_key ()
      'Getter' function for member m_key_show_ui_sequence_key
bool * at_show_ui_sequence_number ()
      'Getter' function for member m_key_show_ui_sequence_number
```

## **Private Attributes**

bool m\_key\_show\_ui\_sequence\_key

If set, shows the shortcut-keys on each filled pattern slot in the main window.

• bool m\_key\_show\_ui\_sequence\_number

If set, shows the sequence number on each filled pattern and empty pattern slot in the main window.

SlotMap m\_key\_events

Holds the mapping of keys to the pattern slots.

SlotMap m\_key\_groups

Holds the mapping of keys to the mute groups.

RevSlotMap m\_key\_events\_rev

Holds the reverse mapping of the pattern slots to the keys.

RevSlotMap m\_key\_groups\_rev

Holds the reverse mapping of the mute groups to the keys.

unsigned int m\_key\_bpm\_up

Provides key assignments for some key sequencer features.

• unsigned int m\_key\_bpm\_dn

BPM down, semicolon.

• unsigned int m\_key\_replace

Replace, Ctrl-L.

• unsigned int m\_key\_queue

Queue, Ctrl-R.

• unsigned int m\_key\_keep\_queue

Keep queue, backslash.

• unsigned int m\_key\_snapshot\_1

Snapshot 1, Alt-L.

• unsigned int m\_key\_snapshot\_2

Snapshot 1, Alt-R.

• unsigned int m\_key\_screenset\_up

Set up, Right-].

· unsigned int m key screenset dn

Set down, Left-[.

• unsigned int m\_key\_set\_playing\_screenset

Set set, Home key.

unsigned int m\_key\_group\_on

Group on, igrave key.

• unsigned int m\_key\_group\_off

Group off, apostrophe!

• unsigned int m\_key\_group\_learn

Group learn, Insert.

• unsigned int m\_key\_start

Start play, Space key.

unsigned int m\_key\_pause

Pause play, Period.

• unsigned int m\_key\_song\_mode

Song versus Live mode.

unsigned int m\_key\_toggle\_jack

Toggle JACK connect.

· unsigned int m key menu mode

Menu enabled/disabled.

• unsigned int m\_key\_follow\_transport

Toggle following JACK.

• unsigned int m\_key\_rewind

Start rewind.

• unsigned int m\_key\_fast\_forward

Start fast-forward.

• unsigned int m\_key\_pointer\_position

Set progress to mouse.

unsigned int m\_key\_toggle\_mutes

Toggle all patterns.

unsigned int m\_key\_tap\_bpm

To tap out the BPM.

unsigned int m\_key\_pattern\_edit

Show pattern editor.

• unsigned int m\_key\_event\_edit

Show event editor.

• unsigned int m\_key\_stop

Stop play, Escape.

13.26.4.56 tap_bpm() [2/2]
void seq64::keys_perform::tap_bpm (
             unsigned int key ) [inline]
13.26.4.57 show_ui_sequence_key() [1/2]
bool seq64::keys_perform::show_ui_sequence_key ( ) const [inline]
Used in mainwid, options, optionsfile, userfile, and perform.
13.26.4.58 show_ui_sequence_key() [2/2]
void seq64::keys_perform::show_ui_sequence_key (
             bool flag ) [inline]
Parameters
 flag
       The flag for showing the sequence key characters in each pattern slot.
13.26.4.59 show_ui_sequence_number() [1/2]
bool seq64::keys_perform::show_ui_sequence_number ( ) const [inline]
Used in mainwid, options, optionsfile, userfile, and perform.
13.26.4.60 show_ui_sequence_number() [2/2]
void seq64::keys_perform::show_ui_sequence_number (
             bool flag ) [inline]
Parameters
 flaa
       The flag for showing the sequence number in each pattern slot.
13.26.4.61 get_key_events()
SlotMap& seq64::keys_perform::get_key_events ( ) [inline]
13.26.4.62 get_key_groups()
```

SlotMap& seq64::keys\_perform::get\_key\_groups ( ) [inline]

#### 13.26.4.63 get\_key\_events\_rev()

```
RevSlotMap& seq64::keys_perform::get_key_events_rev ( ) [inline]
```

# 13.26.4.64 get\_key\_groups\_rev()

```
RevSlotMap& seq64::keys_perform::get_key_groups_rev ( ) [inline]
```

#### 13.26.4.65 lookup\_keyevent\_key()

#### **Parameters**

seqnum

Provides the sequence number to look up in the reverse key map for patterns/sequences. If the count for this value is 0, then a question mark character is returned. Not checked for maximum!

## 13.26.4.66 lookup\_keyevent\_seq()

# **Parameters**

keycode

Provides the keycode to look up in the (forward) key map for patterns/sequences. If the count for this value is 0, then a 0 is returned.

# 13.26.4.67 lookup\_keygroup\_key()

## **Parameters**

groupnum

Provides the group number to look up in the reverse key map for groups. If the count for this value is 0, then a question mark character is returned.

# 13.26.4.68 lookup\_keygroup\_group()

#### **Parameters**

keycode Provides the sequence number to look up in the reverse key map for groups. If the count for this value is 0, then a 0 is returned.

# 13.26.4.69 key\_name()

In gtkmm, this is done via the gdk\_keyval\_name() function. Here, in the base class, we just provide an easy-to-create string.

#### **Parameters**

*key* Provides the numeric value of the keystroke.

#### Returns

Returns the name of the key, in the format "Key 0xkkkk".

Reimplemented in seq64::keys\_perform\_gtk2.

```
13.26.4.70 set_all_key_events()
```

```
virtual void seq64::keys_perform::set_all_key_events ( ) [inline], [virtual]
```

Must be called by the derived-class's override of this function.

Reimplemented in seq64::keys\_perform\_gtk2.

```
13.26.4.71 set_all_key_groups()
```

```
virtual void seq64::keys_perform::set_all_key_groups ( ) [inline], [virtual]
```

Must be called by the derived-class's override of this function.

Reimplemented in seq64::keys\_perform\_gtk2.

# 13.26.4.72 set\_key\_event()

```
void seq64::keys_perform::set_key_event (
          unsigned int keycode,
          long sequence_slot )
```

It is called 32 times, corresponding the pattern/sequence slots in the Patterns window.

#### **Parameters**

keycode	The key to be assigned.
sequence_slot	The perform event slot into which the keycode will be assigned.

# 13.26.4.73 set\_key\_group()

```
void seq64::keys_perform::set_key_group (
          unsigned int keycode,
          long group_slot )
```

It is called 32 times, corresponding the pattern/sequence slots in the Patterns window.

#### **Parameters**

keycode	The key to be assigned.
group_slot	The perform group slot into which the keycode will be assigned.

## 13.26.4.74 at\_bpm\_up()

```
unsigned int* seq64::keys_perform::at_bpm_up ( ) [inline], [protected]
```

They are used in the options module, and, for brevity, are accessed using the PREFKEY\_ADDR() macro. 'Getter' function for member  $m_{key\_bpm\_up}$ 

Address getter for the bpm\_up operation.

```
13.26.4.75 at_bpm_dn()
```

```
unsigned int* seq64::keys_perform::at_bpm_dn ( ) [inline], [protected]
```

Address getter for the bpm\_dn operation.

# 13.26.4.76 at\_replace()

```
unsigned int* seq64::keys_perform::at_replace ( ) [inline], [protected]
```

Address getter for the replace operation.

```
13.26.4.77 at_queue()
```

```
unsigned int* seq64::keys_perform::at_queue ( ) [inline], [protected]
```

Address getter for the queue operation.

```
13.26.4.78 at_keep_queue()
unsigned int* seq64::keys_perform::at_keep_queue ( ) [inline], [protected]
Address getter for the keep_queue operation.
13.26.4.79 at_snapshot_1()
unsigned int* seq64::keys_perform::at_snapshot_1 ( ) [inline], [protected]
Address getter for the snapshot_1 operation.
13.26.4.80 at_snapshot_2()
unsigned int* seq64::keys_perform::at_snapshot_2 ( ) [inline], [protected]
Address getter for the snapshot_2 operation.
13.26.4.81 at_screenset_up()
unsigned int* seq64::keys_perform::at_screenset_up ( ) [inline], [protected]
Address getter for the screenset_up operation.
13.26.4.82 at_screenset_dn()
unsigned int* seq64::keys_perform::at_screenset_dn ( ) [inline], [protected]
Address getter for the screenset_dn operation.
13.26.4.83 at set playing screenset()
unsigned int* seq64::keys_perform::at_set_playing_screenset ( ) [inline], [protected]
Address getter for the set playing screenset operation.
13.26.4.84 at_group_on()
unsigned int* seq64::keys_perform::at_group_on ( ) [inline], [protected]
Address getter for the group_on operation.
13.26.4.85 at_group_off()
unsigned int* seq64::keys_perform::at_group_off ( ) [inline], [protected]
```

Address getter for the group\_off operation.

```
13.26.4.86 at_group_learn()
unsigned int* seq64::keys_perform::at_group_learn ( ) [inline], [protected]
Address getter for the group_learn operation.
13.26.4.87 at_start()
unsigned int* seq64::keys_perform::at_start ( ) [inline], [protected]
Address getter for the start operation.
13.26.4.88 at_pause()
unsigned int* seq64::keys_perform::at_pause ( ) [inline], [protected]
Address getter for the pause operation.
13.26.4.89 at_song_mode()
unsigned int* seq64::keys_perform::at_song_mode ( ) [inline], [protected]
Address getter for the song-mode operation.
13.26.4.90 at_toggle_jack()
unsigned int* seq64::keys_perform::at_toggle_jack ( ) [inline], [protected]
Address getter for the toggle-jack operation.
13.26.4.91 at_menu_mode()
unsigned int* seq64::keys_perform::at_menu_mode ( ) [inline], [protected]
Address getter for the menu-mode operation.
13.26.4.92 at_follow_transport()
unsigned int* seq64::keys_perform::at_follow_transport ( ) [inline], [protected]
Address getter for the follow-transport operation.
13.26.4.93 at_fast_forward()
unsigned int* seq64::keys_perform::at_fast_forward ( ) [inline], [protected]
```

Address getter for the fast-forward operation.

```
13.26.4.94 at_rewind()
unsigned int* seq64::keys_perform::at_rewind ( ) [inline], [protected]
Address getter for the rewind operation.
13.26.4.95 at_pointer_position()
unsigned int* seq64::keys_perform::at_pointer_position ( ) [inline], [protected]
Address getter for the pointer operation.
13.26.4.96 at_toggle_mutes()
unsigned int* seq64::keys_perform::at_toggle_mutes ( ) [inline], [protected]
Address getter for the toggle-mutes operation.
13.26.4.97 at_tap_bpm()
unsigned int* seq64::keys_perform::at_tap_bpm () [inline], [protected]
Address getter for the tap_bpm operation.
13.26.4.98 at_pattern_edit()
unsigned int* seq64::keys_perform::at_pattern_edit ( ) [inline], [protected]
Address getter for the pattern-edit operation.
13.26.4.99 at_event_edit()
unsigned int* seq64::keys_perform::at_event_edit ( ) [inline], [protected]
Address getter for the event-edit operation.
13.26.4.100 at_stop()
unsigned int* seq64::keys_perform::at_stop ( ) [inline], [protected]
Address getter for the stop operation.
13.26.4.101 at_show_ui_sequence_key()
bool* seq64::keys_perform::at_show_ui_sequence_key ( ) [inline], [protected]
```

Address getter for the show\_ui\_sequence\_key value.

```
13.26.4.102 at_show_ui_sequence_number()
bool* seq64::keys_perform::at_show_ui_sequence_number ( ) [inline], [protected]
Address getter for the show_ui_sequence_number value.

# 13.27 seq64::keys\_perform\_gtk2 Class Reference

This class supports the performance mode.

Inheritance diagram for seq64::keys\_perform\_gtk2:

# **Public Member Functions**

keys\_perform\_gtk2 ()

This construction initializes a vast number of member variables, some of them public!

virtual ~keys\_perform\_gtk2 ()

A rote virtual destructor.

- · virtual std::string key\_name (unsigned int key) const
- virtual void set\_all\_key\_events ()

Sets up the keys for arming/unmuting events in the Gtk-2 environment.

virtual void set\_all\_key\_groups ()

Sets up the keys for group events in the Gtk-2 environment.

## **Additional Inherited Members**

# 13.27.1 Detailed Description

It has way too many data members, many of the public. Might be ripe for refactoring.

## 13.27.2 Constructor & Destructor Documentation

```
13.27.2.1 keys_perform_gtk2()
```

```
seq64::keys_perform_gtk2::keys_perform_gtk2 ( )
```

```
13.27.2.2 \simkeys_perform_gtk2()
```

```
seq64::keys_perform_gtk2::~keys_perform_gtk2 ( ) [virtual]
```

No action.

# 13.27.3 Member Function Documentation

```
13.27.3.1 key_name()
```

Reimplemented from seq64::keys\_perform.

```
13.27.3.2 set_all_key_events()
```

```
void seq64::keys_perform_gtk2::set_all_key_events ( ) [virtual]
```

The base-class function call makes sure the the related lists are cleared before rebuilding them here.

Reimplemented from seq64::keys\_perform.

```
13.27.3.3 set_all_key_groups()
```

```
void seq64::keys_perform_gtk2::set_all_key_groups ( ) [virtual]
```

The base-class function call makes sure the the related lists are cleared before rebuilding them here.

Reimplemented from seq64::keys\_perform.

# 13.28 seq64::keys\_perform\_transfer Struct Reference

Provides a data-transfer structure to make it easier to fill in a keys perform object's members using sscanf().

# 13.29 seq64::keystroke Class Reference

# Encapsulates any practical keystroke.

#### **Public Member Functions**

• keystroke ()

The default constructor for class keystroke.

The principal constructor.

keystroke (const keystroke &rhs)

Provides the rote copy constructor.

keystroke & operator= (const keystroke &rhs)

Provides the rote principal assignment operator.

• bool is press () const

'Getter' function for member m\_is\_press

• bool is\_letter (unsigned int ch=SEQ64\_KEYSTROKE\_BAD\_VALUE) const

'Getter' function for member m\_key to test letters, handles ASCII only.

· bool is (unsigned int ch) const

Tests the key value to see if it matches the given character exactly (no case-insensitivity).

• bool is\_delete () const

'Getter' function for member m\_key to test for a delete-causing key.

• unsigned int key () const

'Getter' function for member m\_key

void shift\_lock ()

If a lower-case letter, a number, or another character on the "main" part of the keyboard, shift the m\_key value to upper-case or the character shifted on a standard American keyboard.

• seq\_modifier\_t modifier () const

'Getter' function for member m\_modifier

bool mod\_control () const

'Getter' function for member m\_modifier tested for Ctrl key.

• bool mod\_control\_shift () const

'Getter' function for member m\_modifier tested for Ctrl and Shift key.

bool mod\_super () const

'Getter' function for member m\_modifier tested for Mod4/Super/Windows key.

# **Private Attributes**

bool m\_is\_press

Determines if the key was a press or a release.

unsigned int m\_key

The key that was pressed or released.

· seq\_modifier\_t m\_modifier

The optional modifier value.

#### 13.29.1 Detailed Description

Useful in passing more generic events to non-GUI classes.

# 13.29.2 Constructor & Destructor Documentation

#### **Parameters**

key	The keystroke number of the key that was pressed or released.
press	If true, the keystroke action was a press, otherwise it was a release.
modkey	The modifier key combination that was pressed, if any, in the form of a bit-mask, as defined in the gdk_basic_keys module. Common mask values are SEQ64_SHIFT_MASK, SEQ64_CONTROL_MASK, SEQ64_MOD1_MASK, and SEQ64_MOD4_MASK. If no modifier, this value is SEQ64_NO_MASK.

# **Parameters**

rhs The object to be copied.

# 13.29.3 Member Function Documentation

# 13.29.3.1 operator=()

#### **Parameters**

rhs The object to be assigned.

# Returns

Returns the reference to the current object, for use in assignment chains.

# 13.29.3.2 is\_press()

```
bool seq64::keystroke::is_press ( ) const [inline]
```

# 13.29.3.3 is\_letter()

#### **Parameters**

ch An optional character to test as an ASCII letter.

#### Returns

If a character is not provided, true is returned if it is an upper or lower-case letter. Otherwise, true is returned if the m\_key value matches the character case-insensitively.

# **Tricky Code**

#### 13.29.3.4 is()

#### **Parameters**

ch The character to be tested.

#### Returns

Returns true if  $m_{key} == ch$ .

# 13.29.3.5 is\_delete()

```
bool seq64::keystroke::is_delete ( ) const [inline]
```

# 13.29.3.6 key()

```
unsigned int seq64::keystroke::key ( ) const [inline]
```

```
13.29.3.7 shift_lock()
```

```
void seq64::keystroke::shift_lock ( )
```

Currently also assumes the ASCII character set.

There's an oddity here: the shift of '2' is the '@' character, but seq24 seems to have treated it like the "" character. Some others were treated the same:

```
Key: 1 2 3 4 5 6 7 8 9 0
Shift: ! @ # $ % ^ & * ( )
Seq24: ! " # $ % & ' ( ) space
```

This function is meant to avoid using the Caps-Lock when picking a group-learn character in the group-learn mode.

#### 13.29.3.8 modifier()

```
seq_modifier_t seq64::keystroke::modifier ( ) const [inline]
```

# 13.29.3.9 mod\_control()

```
bool seq64::keystroke::mod_control ( ) const [inline]
```

# 13.29.3.10 mod\_control\_shift()

```
bool seq64::keystroke::mod_control_shift ( ) const [inline]
```

# 13.29.3.11 mod\_super()

```
bool seq64::keystroke::mod_super ( ) const [inline]
```

# 13.29.4 Field Documentation

# 13.29.4.1 m\_is\_press

```
bool seq64::keystroke::m_is_press [private]
```

See the SEQ64\_KEYSTROKE\_PRESS and SEQ64\_KEYSTROKE\_RELEASE readability macros.

#### 13.29.4.2 m\_key

```
unsigned int seq64::keystroke::m_key [private]
```

Generally, the extended ASCII range (0 to 255) is supported. However, Gtk-2.x/3.x will generally support the full gamut of characters defined in the gdk\_basic\_keys.h module. We define minimum and maximum range macros for keystrokes that are a bit generous.

13.29.4.3 m\_modifier

```
seq_modifier_t seq64::keystroke::m_modifier [private]
```

Note that SEQ64 NO MASK is our word for 0, meaning "no modifier".

# 13.30 seq64::lash Class Reference

This class supports LASH operations, if compiled with LASH support (i.e.

#### **Public Member Functions**

• lash (perform &p, int argc, char \*\*argv)

This constructor calls lash\_extract(), using the command-line arguments, if SEQ64\_LASH\_SUPPORT is enabled.

void set\_alsa\_client\_id (int id)

Make ourselves a LASH ALSA client.

• void start ()

Process any LASH events every 250 msec, which is an arbitrarily chosen interval.

• bool process\_events ()

Process LASH events.

#### **Private Member Functions**

bool init ()

Initializes LASH support, if enabled.

void handle\_event (lash\_event\_t \*conf)

Handle a LASH event.

void handle\_config (lash\_config\_t \*conf)

Handle a LASH configuration item.

#### **Private Attributes**

perform & m\_perform

A hook into the single perform object in the application.

lash\_client\_t \* m\_client

Holds the client "handle" returned by the lash\_init() function.

• lash args t \* m lash args

Holds the command-line arguments used by the lash\_init() function.

bool m\_is\_lash\_supported

Indicates if LASH support has been compiled into the library.

# 13.30.1 Detailed Description

SEQ64\_LASH\_SUPPORT is defined). All of the ifdef skeleton work is done in this class in such a way that any other part of the code can use this class whether or not lash support is actually built in; the functions will just do nothing.

# 13.30.2 Constructor & Destructor Documentation

We fixed the crazy usage of argc and argv here and in the client code in the seq24 module.

#### **Parameters**

р	The perform object that needs to implement LASH support.	
argc	The number of command-line arguments.	
argv	The command-line arguments.	

# 13.30.3 Member Function Documentation

/param id The ALSA client ID to be set.

```
13.30.3.2 start()
void seq64::lash::start ( )

13.30.3.3 process_events()
bool seq64::lash::process_events ( )
Returns
```

# Always returns true.

```
13.30.3.4 init()
bool seq64::lash::init ( ) [private]
```

#### Returns

Returns true if the LASH subsystem was able to be initialized, and a LASH client representative (m\_client) was allocated.

#### 13.30.3.5 handle\_event()

#### **Parameters**

Provides the event to be handled.

# 13.30.3.6 handle\_config()

```
void seq64::lash::handle\_config (
            lash_config_t * conf ) [private]
```

Currently incomplete.

#### **Parameters**

*conf* | Provides the configuration item to handle.

# 13.30.4 Field Documentation

# 13.30.4.1 m\_perform

```
perform& seq64::lash::m_perform [private]
```

#### 13.30.4.2 m\_client

```
lash_client_t* seq64::lash::m_client [private]
```

# 13.30.4.3 m\_lash\_args

```
lash_args_t* seq64::lash::m_lash_args [private]
```

# 13.30.4.4 m\_is\_lash\_supported

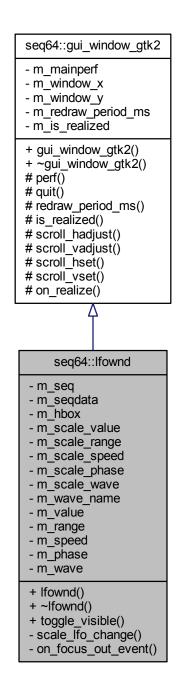

```
bool seq64::lash::m_is_lash_supported [private]
```

Is set to true if SEQ64\_LASH\_SUPPORT is defined. This variable is not used, but we will keep it around for the possibility of testing LASH support at run time.

# 13.31 seq64::Ifownd Class Reference

One LFO window class.

Inheritance diagram for seq64::Ifownd:

# **Public Member Functions**

• Ifownd (perform &p, sequence &seq, seqdata &sdata)

Constructs the LFO window.

- virtual ∼lfownd ()
- void toggle\_visible ()

# **Private Member Functions**

- void scale Ifo change ()
- bool on\_focus\_out\_event (GdkEventFocus \*p0)

#### **Private Attributes**

• sequence & m\_seq

The sequence associated with this window.

• seqdata & m\_seqdata

The seqdata associated with this window.

• Gtk::HBox \* m\_hbox

The main horizontal packing box.

• Gtk::VScale \* m\_scale\_value

Vertical slider for value.

• Gtk::VScale \* m\_scale\_range

Vertical slider for range.

• Gtk::VScale \* m\_scale\_speed

Vertical slider for speed.

• Gtk::VScale \* m\_scale\_phase

Vertical slider for phase.

• Gtk::VScale \* m scale wave

Vertical slider for wave type.

• Gtk::Label \* m\_wave\_name

Human readable name for wave type.

• double m\_value

Value.

• double m\_range

Range.

• double m\_speed

Speed.

• double m\_phase

Phase.

• wave\_type\_t m\_wave

Wave type.

# **Additional Inherited Members**

# 13.31.1 Detailed Description

Personally, it seems a bit of a odd duck to be included in Sequencer64, so we're thinking of a better way to manage the data managed by this window.

# 13.31.2 Constructor & Destructor Documentation

#### 13.31.2.1 Ifownd()

#### **Parameters**

р	The performance object, which holds parameters necessary for manipulating events.
seq	The sequence/pattern that is to be affected by the LFO window. It holds the actual MIDI events being
	modified.
sdata	The data pane/panel of the pattern editor window representing the sequence. We need to tell it to
	redraw.

```
13.31.2.2 ∼lfownd()
```

```
seq64::lfownd::~lfownd ( ) [virtual]

# 13.32 seq64::maintime Class Reference

This class provides the drawing of the progress bar at the top of the main window, along with two "pills" that move in time with the beat and measure.

Inheritance diagram for seq64::maintime:

# **Public Member Functions**

- maintime (perform &p, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)
  - This constructor sets up the colors black, white, and grey, and then allocates them.
- virtual ∼maintime ()

Let's provide a do-nothing virtual destructor.

#### **Private Member Functions**

- maintime (const maintime &)
- maintime & operator= (const maintime &)
- int idle progress (midipulse ticks)

This function clears the window, sets the foreground to black, draws the "time" window's rectangle, and then draws a rectangle for noting the progress of the beat, and the progress for a bar.

• void on\_realize ()

Handles realization of the window.

bool on expose event (GdkEventExpose \*ev)

This function merely idles.

#### **Private Attributes**

· const int m beat width

Provides the divisor for ticks to produce a beat value.

· const int m bar width

Provides the divisor for ticks to produce a bar value.

const int m pill width

Provides the width of the pills, little black squares that show the progress of a beat and a bar (measure).

· const int m\_box\_width

The width/length of the rectangle to be drawn inside the maintime window.

· const int m box height

The height of the rectangle to be drawn inside the maintime window.

• const int m\_flash\_width

The width/length of the flashing rectangle to be drawn inside the maintime window.

const int m\_flash\_height

The height of the flashing rectangle to be drawn inside the maintime window.

· const int m flash x

The x value at which a flash should occur.

• const int m\_box\_less\_pill

The width/length of the maintime window minus the width of the pill.

· midipulse m tick

Saves the tick value for on\_expose\_event().

• int m\_ppqn

Provides the active PPQN value.

#### **Friends**

· class mainwnd

#### **Additional Inherited Members**

# 13.32.1 Detailed Description

We added a lot of members to hold the results of calculations that involve what are essentially constant. This saves CPU time, and maybe a little memory for the code to make those calculations more than once.

# 13.32.2 Constructor & Destructor Documentation

In the constructor you can only allocate colors; get\_window() would return 0 because the windows has not yet been realized.

```
13.32.2.3 \simmaintime()
```

```
virtual seq64::maintime::\simmaintime ( ) [inline], [virtual]
```

# 13.32.3 Member Function Documentation

```
13.32.3.1 operator=()
```

Idle hands do the devil's work. We should eventually support some generic coloring for "dark themes". The default coloring is better for "light themes".

#### **Parameters**

```
ticks Provides the main tick setting. This setting is provided by mainwnd(), in its timer callback.
```

#### Returns

Always returns 1 (it used to return "true"!).

#### 13.32.3.3 on\_realize()

```
void seq64::maintime::on_realize ( ) [private]
```

It performs the base class's on\_realize() function. It then allocates some additional resources: a window, a GC (?), and it clears the window. Then it sets the default size of the window, specified by GUI constructor parameters.

#### 13.32.3.4 on\_expose\_event()

We don't need the m\_tick member, the function works as well if 0 is passed in. We've removed m\_tick permanently.

Actually, it might be useful after all, to avoid flickering under JACK transport. Let's put it back for now. (It doesn't help, but we will leave it in, the overhead is small.)

#### 13.32.4 Friends And Related Function Documentation

#### 13.32.4.1 mainwnd

```
friend class mainwnd [friend]
```

#### 13.32.5 Field Documentation

```
13.32.5.1 m_beat_width
```

```
const int seq64::maintime::m_beat_width [private]
```

Currently, this value is hardwired to 4, but will eventually be wired up as usr().midi\_beat\_width().

```
13.32.5.2 m_bar_width
```

```
const int seq64::maintime::m_bar_width [private]
```

Currently, this value is hardwired to 16, but will eventually be wired up as usr().midi\_beat\_width() \* usr().midi\_\circ
beats\_per\_bar().

#### 13.32.5.3 m\_pill\_width

```
const int seq64::maintime::m_pill_width [private]
```

#### 13.32.5.4 m\_box\_width

```
const int seq64::maintime::m_box_width [private]
```

This item absolutely depends on the main window being non-resizable.

```
13.32.5.5 m_box_height
const int seq64::maintime::m_box_height [private]
This item absolutely depends on the main window being non-resizable.
13.32.5.6 m_flash_width
const int seq64::maintime::m_flash_width [private]
Just a bit smaller than m box width.
13.32.5.7 m_flash_height
const int seq64::maintime::m_flash_height [private]
Just a bit smaller than m_box_width.
13.32.5.8 m_flash_x
const int seq64::maintime::m_flash_x [private]
13.32.5.9 m_box_less_pill
const int seq64::maintime::m_box_less_pill [private]
13.32.5.10 m_tick
midipulse seq64::maintime::m_tick [private]
It might actually be useful after all. And the overhead is tiny.
13.32.5.11 m_ppqn
```

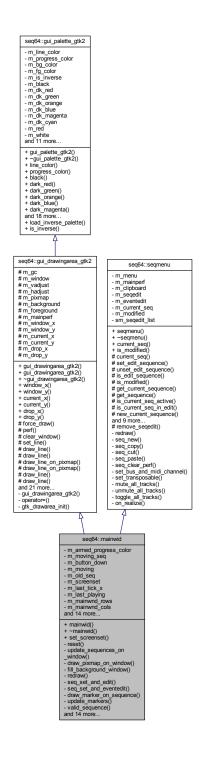

While this is effectively a constant for the duration of a tune, it might change as different tunes are loaded.

int seq64::maintime::m\_ppqn [private]

# 13.33 seq64::mainwid Class Reference

This class implements the piano roll area of the application.

Inheritance diagram for seq64::mainwid:

# **Public Member Functions**

• mainwid (perform &p)

This constructor sets all of the members.

virtual ∼mainwid ()

A rote destructor.

void set screenset (int ss, bool setperf=false)

Set the current screen-set.

#### **Private Member Functions**

· void reset ()

This function redraws everything and queues up a redraw operation.

void update\_sequences\_on\_window ()

Updates the image of multiple sequencer/pattern slots.

void draw\_pixmap\_on\_window ()

This function queues the blit of pixmap to window.

· void fill background window ()

This function updates the background window, clearing it.

virtual void redraw (int seq)

This virtual function, overridden from the seqmenu base class, draws the the given pattern/sequence again.

virtual void seg set and edit (int segnum)

Calculates the sequence number based on the screenset and then calls the base-class function to bring up the pattern/sequence editor.

virtual void seq\_set\_and\_eventedit (int seqnum)

Calculates the sequence number based on the screenset and then calls the base-class function to bring up the event editor

void draw\_marker\_on\_sequence (int seq, int tick)

Does the actual drawing of one pattern/sequence position marker, a vertical progress bar.

void update\_markers (int ticks)

Draw the cursors (long vertical bars) on each sequence, so that they follow the playing progress of each sequence in the mainwid (Patterns Panel).

bool valid sequence (int seq)

Common-code helper function.

void draw\_sequence\_on\_pixmap (int seq)

This function draws a specific pattern/sequence on the pixmap located in the main window of the application, the Patterns Panel.

void draw\_sequences\_on\_pixmap ()

This function fills the pixmap with sequences.

void draw\_sequence\_pixmap\_on\_window (int seq)

This function draws a sequence pixmap in the Patterns Panel.

int seq\_from\_xy (int x, int y)

Translates XY coordiinates in the Patterns Panel to a sequence number.

• int timeout ()

Provides a stock callback, because some kind of callback is needed.

• void calculate\_base\_sizes (int seq, int &basex, int &basey)

Provides a way to calculate the base x and y size values for the pattern map.

void select\_fg\_bg\_colors (int seqnum)

Picks the foreground and background colors based on the sequence in edit and the SEQ64\_EDIT\_SEQUENCE\_← HIGHLIGHT macro.

• void on\_realize ()

For this GTK callback, on realization of window, initialize the shiz.

bool on\_expose\_event (GdkEventExpose \*ev)

Implements the GTK expose event callback.

• bool on\_button\_press\_event (GdkEventButton \*ev)

Handles a press of a mouse button in one of the sequence/pattern slots.

bool on\_button\_release\_event (GdkEventButton \*ev)

Handles a release of a mouse button.

bool on\_motion\_notify\_event (GdkEventMotion \*p0)

Handle the motion of the mouse if a mouse button is down and in another sequence and if the current sequence is not in edit mode.

bool on\_focus\_in\_event (GdkEventFocus \*)

Handles an on-focus event.

bool on\_focus\_out\_event (GdkEventFocus \*)

Handles an out-of-focus event.

# **Private Attributes**

Color m\_armed\_progress\_color

Holds the progress color for armed sequences, which have a black background.

sequence m\_moving\_seq

Holds a partial copy of the sequence we are moving on the patterns panel.

• bool m\_button\_down

Indicates that the mouse button is still down.

bool m\_moving

Indicates that we are still in the middle of a drag-and-drop operation.

int m\_old\_seq

Holds the sequence number of a sequence being drag-and-dropped.

• int m\_screenset

Indicates the current screenset that is visible.

long m\_last\_tick\_x [c\_max\_sequence]

Holds the last active tick for each sequence, used in erasing the progress bar.

• long m\_last\_playing [c\_max\_sequence]

Holds the last playing tick for each sequence.

int m\_mainwnd\_rows

These values are assigned to the values given by the constants of similar names in globals.h, and we will make them parameters or user-interface configuration items later.

int m\_mainwnd\_cols

Number of columns, unused in settings.

• int m\_seqarea\_x

Roughly with width of the main window.

int m\_seqarea\_y

Roughly with height of the main window.

• int m\_seqarea\_seq\_x

To be determined.

int m\_seqarea\_seq\_y

To be determined.

· int m mainwid x

To be determined.

• int m\_mainwid\_y

To be determined.

int m\_mainwid\_border

Main-window border, unused setting.

• int m\_mainwid\_spacing

Main-window spacing, unused setting.

• int m\_text\_size\_x

Text width, varies with font in use.

· int m\_text\_size\_y

Text height, varies with font in use.

• int m\_max\_sets

The maximum number of sets, use all over.

· int m screenset slots

Provides a convenience variable for avoiding multiplications.

· int m\_screenset\_offset

Provides a convenience variable for avoiding multiplications.

· int m\_progress\_height

Provides the height of the progress bar, to save calculations and for consistency between drawing and erasing the progress bar.

#### **Friends**

- · class mainwnd
- void update\_mainwid\_sequences ()

This global function in the seq64 namespace calls mainwid :: update\_sequences\_on\_window(), if the global mainwid object exists.

#### **Additional Inherited Members**

#### 13.33.1 Detailed Description

It inherits from <a href="mailto:gui\_drawingarea\_gtk2">gui\_drawingarea\_gtk2</a> to support the font, color, and other GUI functionality, and from seqmenu to support the right-click Edit/New/Cut right-click menu. The friend class and function are for updating the current sequence and for control via the mainward object.

# 13.33.2 Constructor & Destructor Documentation

#### 13.33.2.1 mainwid()

And it asks for a size of c\_mainwid\_x by c\_mainwid\_y. It adds GDK masks for button presses, releases, motion, key presses, and focus changes. Also logs a self-referential singleton pointer to use for the current-edit highlighting support.

#### **Parameters**

p | Provides the reference to the all-important perform object.

#### 13.33.2.2 ∼mainwid()

```
seq64::mainwid::~mainwid ( ) [virtual]
```

#### 13.33.3 Member Function Documentation

# 13.33.3.1 set\_screenset()

The clamping algorithm for the screeset is a bit weird: if less than 0, we set m\_screenset to its maximum, and if greater than the maximum, we set it to its minimum. Not sure if this matters.

Note that m\_screenset\_slots = m\_mainwnd\_rows \* m\_mainwnd\_cols.

We will likely replace this with perform::set\_screenset(), which recapitulates the code above completely, whereas perform::set-offset() recapitulates only the line of code immediately above it. However, note that there is a back-and-forth between setting the screenset via perform (using MIDI control) versus the GUI in the mainwand class. Probably useful to add a default boolean to prevent circular manipulation.

#### **Parameters**

ss	Provides the screen-set number to set.	
setperf	If true, then also call perfrom::set_screenset(). Defaults to false. It might be better if it defaults to true.	

#### 13.33.3.2 reset()

```
void seq64::mainwid::reset ( ) [inline], [private]
```

#### 13.33.3.3 update\_sequences\_on\_window()

```
void seq64::mainwid::update_sequences_on_window ( ) [inline], [private]
```

Used by the friend class mainwnd, but also useful for our new feature to fully highlight the current sequence. Calls reset() if SEQ64\_EDIT\_SEQUENCE\_HIGHLIGHT is defined.

#### 13.33.3.4 draw\_pixmap\_on\_window()

```
void seq64::mainwid::draw_pixmap_on_window ( ) [inline], [private]
```

# 13.33.3.5 fill\_background\_window()

```
void seq64::mainwid::fill_background_window ( ) [inline], [private]
```

# 13.33.3.6 redraw()

#### **Parameters**

seqnum	Provides the number of the sequence to draw.
--------	--

Implements seq64::segmenu.

#### 13.33.3.7 seq\_set\_and\_edit()

Used with the '=' key selection, by default.

Reimplemented from seq64::seqmenu.

#### 13.33.3.8 seq\_set\_and\_eventedit()

Used with the '-' key selection, by default.

Reimplemented from seq64::seqmenu.

#### 13.33.3.9 draw\_marker\_on\_sequence()

If the sequence has no events, this function doesn't bother drawing a position marker.

Note that, when Sequencer64 first comes up, and perform::is\_dirty\_main() is called, no sequences exist yet. Also, currently the redraw() is hit when seq\_edit() is called, but not when seq\_event\_edit() is called, which makes the latter not paint the in-edit highlight colors (if enabled). Why?

#### **Parameters**

seqnum	Provides the number of the sequence to draw.
tick	Provides the location to draw the marker. If pause support is compiled in (i.e. no –disable-pause in
	the configuration), then this parameter is ignored, and is replaced by the sequences' get_lask_tick() value. This causes correct stop/pause/play progress-bar behavior in each pattern slot.

# 13.33.3.10 update\_markers()

#### **Parameters**

*tick* Starting point for drawing the markers.

# 13.33.3.11 valid\_sequence()

#### **Parameters**

seqnum	Provides the number of the sequence to validate.
--------	--

#### Returns

Returns true if the sequence number is valid for the current m screenset value.

#### 13.33.3.12 draw\_sequence\_on\_pixmap()

The sequence is drawn only if it is in the current screen set (indicated by m\_screenset). Also, we ignore the sequence if it does not exist.

# Note

If only the main window is up, then the sequences just play (muted by default) – the progress bars move in each pattern. Gaps in the sequence in the Song (performance) Editor don't change the appearance of the patterns if only the main window is up. But, if the Song Editor window is up, and the song is started using the controls in the Song Editor, then the active patterns are black while playing, and white when gaps in the sequence are encountered. The muting status in the main window is ignored. The muting in the Song (performance) windows is in force. This setup holds for ALSA, but not for JACK transport.

#### **Parameters**

seqnum	Provides the number of the sequence slot that needs to be drawn. It is checked for validity before
	usage.

#### 13.33.3.13 draw\_sequences\_on\_pixmap()

```
void seq64::mainwid::draw_sequences_on_pixmap ( ) [private]
```

Please note that draw\_sequence\_on\_pixmap() also draws the empty slots of inactive sequences, so we cannot take shortcuts here.

#### 13.33.3.14 draw\_sequence\_pixmap\_on\_window()

The sequence is drawn only if it is in the current screen set (indicated by m\_screenset. This function is used when dragging a pattern from one pattern-slot to another pattern-slot.

We have to add 1 pixel to the y height in order to avoid leaving behind a line at the bottom of an empty pattern-slot.

#### **Parameters**

seqnum	Provides the number of the sequence to draw.
--------	--

# 13.33.3.15 seq\_from\_xy()

#### **Parameters**

X	Provides the x coordinate.
У	Provides the y coordinate.

#### Returns

Returns -1 if the sequence number cannot be calculated.

```
13.33.3.16 timeout()
int seq64::mainwid::timeout ( ) [private]
```

**Todo** We should use this callback to display the current time in the playback.

#### Returns

Always returns true.

# 13.33.3.17 calculate\_base\_sizes()

The values are returned as side-effects.

#### **Parameters**

	seqnum	Provides the number of the sequence to calculate.
out	basex	A return parameter for the x coordinate of the base size.
out	basey	A return parameter for the y coordinate of the base size.

#### 13.33.3.18 select\_fg\_bg\_colors()

void seq64::mainwid::on\_realize ( ) [private]

It allocates any additional resources that weren't initialized in the constructor.

This function used to call font::init(), and was the only place where the font::init() function was called. The init() function gets a color-map from the window. We need a more fool-proof was to do this!

#### 13.33.3.20 on\_expose\_event()

#### **Parameters**

ev	The expose event.

#### Returns

Always returns true.

#### 13.33.3.21 on\_button\_press\_event()

If the press is a single left-click, and no Ctrl key is pressed, then this function grabs the focus, calculates the pattern/sequence over which the button press occurred, and sets the m\_button\_down flag if it is over a pattern. In the release event callback, this then causes the sequence arming/muting to be toggled.

If the press is a single Ctrl-left-click, this function brings up the New or Edit menu. The New menu is brought up if the grid slot is empty, and the Edit menu otherwise. Another way to bring up the same functionality is described in the next paragraph.

If the press is a double-click, it first acts just like two single-clicks (which might confuse the user at first, because it toggles the mute state twice). Then it brings up the Edit menu for the sequence. This new behavior is closer to what users have come to expect from a double-click. I miss the double-click when running seq24.

We also try to handle a Ctrl-double-click as a signal to do an event edit, instead of a sequence edit. The event editor provides a way to look at all events in detail, without having to select the type of event to see. However, this doesn't work, the event is treated like a ctrl-single-click. And we use the Alt key to enable window movement or resizing in our window manager, so that's out.

#### **Parameters**

*ev* Provides the parameters of the button event.

#### Returns

Always returns true.

#### 13.33.3.22 on\_button\_release\_event()

This event is a lot more complex than a press. The left button toggles playback status. The right button brings up a popup menu. If the slot is empty, then a "New" popup is presented, otherwise an "Edit" and selection popup is presented.

Also now implements the new "toggle all other patterns" action, initiated via Shift-Left-Click.

#### **Parameters**

ev Provides the parameters of the button event.

#### Returns

Always returns true.

Tried disabling the setting of the current sequence; it completely disables drag-n-drop. But leaving it in removes the current-sequence highlighting, which otherwise is fine. So we do it only if moving a pattern (drag-and-drop).

#### 13.33.3.23 on\_motion\_notify\_event()

This function moves the selected pattern to another pattern slot. The perform::delete\_sequence() function sets the perform modification flag.

#### **Parameters**

*ev* Provides the parameters of the button event.

#### Returns

Always returns true.

```
13.33.3.24 on_focus_in_event()
```

Just sets the Gtk::HAS\_FOCUS flag.

#### Returns

Always returns false.

# 13.33.3.25 on\_focus\_out\_event()

Just unsets the Gtk::HAS\_FOCUS flag.

# Returns

Always returns false.

# 13.33.4 Friends And Related Function Documentation

#### 13.33.4.1 mainwnd

```
friend class mainwnd [friend]
```

# 13.33.4.2 update\_mainwid\_sequences

```
void update_mainwid_sequences ( ) [friend]
```

It is used by other objects that can modify the currently-edited sequence shown in the mainwid (main window).

# 13.33.5 Field Documentation

# $13.33.5.1 \quad m\_armed\_progress\_color$

```
Color seq64::mainwid::m_armed_progress_color [private]
```

If the progress color is black(), we want to change it to white for unmuted patterns.

```
13.33.5.2 m_moving_seq
sequence seq64::mainwid::m_moving_seq [private]
The assignment is made by sequence::partial_copy(), which behaves like the legacy seq24 code.
13.33.5.3 m_button_down
bool seq64::mainwid::m_button_down [private]
Used in the drag-and-drop functionality.
13.33.5.4 m_moving
bool seq64::mainwid::m_moving [private]
13.33.5.5 m_old_seq
int seq64::mainwid::m_old_seq [private]
13.33.5.6 m_screenset
int seq64::mainwid::m_screenset [private]
13.33.5.7 m last tick x
long seq64::mainwid::m_last_tick_x[c_max_sequence] [private]
13.33.5.8 m_last_playing
long seq64::mainwid::m_last_playing[c_max_sequence] [private]
This doesn't seem to be used anywhere, even though values are logged, so it is macroed out.
13.33.5.9 m_mainwnd_rows
int seq64::mainwid::m_mainwnd_rows [private]
Some of them already have counterparts in the user_settings class. Number of rows, unused part of settings.
13.33.5.10 m_mainwnd_cols
int seq64::mainwid::m_mainwnd_cols [private]
```

```
13.33.5.11 m_seqarea_x
int seq64::mainwid::m_seqarea_x [private]
13.33.5.12 m_seqarea_y
int seq64::mainwid::m_seqarea_y [private]
13.33.5.13 m_seqarea_seq_x
int seq64::mainwid::m_seqarea_seq_x [private]
13.33.5.14 m_seqarea_seq_y
int seq64::mainwid::m_seqarea_seq_y [private]
13.33.5.15 m_mainwid_x
int seq64::mainwid::m_mainwid_x [private]
13.33.5.16 m_mainwid_y
int seq64::mainwid::m_mainwid_y [private]
13.33.5.17 m_mainwid_border
int seq64::mainwid::m_mainwid_border [private]
13.33.5.18 m_mainwid_spacing
int seq64::mainwid::m_mainwid_spacing [private]
13.33.5.19 m text size x
int seq64::mainwid::m_text_size_x [private]
13.33.5.20 m_text_size_y
int seq64::mainwid::m_text_size_y [private]
```

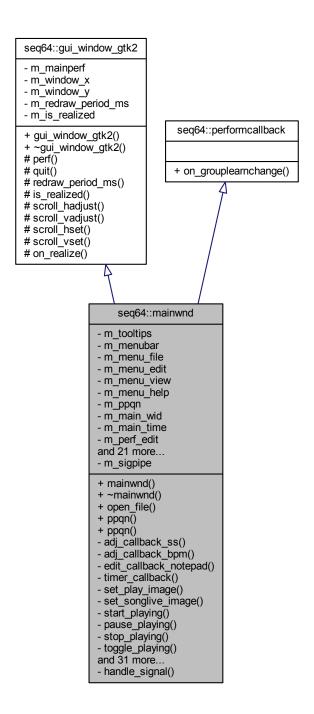

```
13.33.5.21 m_max_sets
int seq64::mainwid::m_max_sets [private]
13.33.5.22 m_screenset_slots
int seq64::mainwid::m_screenset_slots [private]
It is equal to m_mainwnd_rows * m_mainwnd_cols.
13.33.5.23 m_screenset_offset
int seq64::mainwid::m_screenset_offset [private]
It is equally to m\_screenset\_slots*m\_screenset.
13.33.5.24 m_progress_height
```

# 13.34 seq64::mainwnd Class Reference

int seq64::mainwid::m\_progress\_height [private]

This class implements the functionality of the main window of the application, except for the Patterns Panel functionality, which is implemented in the mainwid class.

Inheritance diagram for seq64::mainwnd:

# **Public Member Functions**

- mainwnd (perform &p, bool allowperf2=true, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)
  - The constructor the main window of the application.
- virtual ∼mainwnd ()

This destructor must explicitly delete some allocated resources.

• void open\_file (const std::string &filename)

Opens and parses (reads) a MIDI file.

int ppqn () const

'Getter' function for member m\_ppqn

void ppqn (int ppqn)

'Setter' function for member m\_ppqn We can't set the PPQN value when the mainwnd is created, we have to do it later, using this function.

#### **Private Member Functions**

void adj\_callback\_ss ()

This function is the callback for adjusting the screen-set value.

void adj callback bpm ()

This function is the callback for adjusting the BPM value.

void edit\_callback\_notepad ()

A callback function for handling an edit to the screen-set notepad.

• bool timer callback ()

This function is the GTK timer callback, used to draw our current time and BPM on\_events (the main window).

void set\_play\_image (bool isrunning)

Changes the image used for the pause/play button.

void set songlive image (bool issong)

Changes the image used for the song/live mode button.

void start playing ()

Starts playing of the song.

void pause\_playing ()

Pauses the playing of the song, leaving the progress bar where it stopped.

void stop\_playing ()

Stops the playing of the song.

• void toggle\_playing ()

Reverses the state of playback.

· void learn\_toggle ()

Toggle the group-learn status.

• void open\_performance\_edit ()

Opens the Performance Editor (Song Editor).

void open\_performance\_edit\_2 ()

Opens the second Performance Editor (Song Editor).

• void enregister\_perfedits ()

This function brings together the two perfedit objects, so that they can tell each other when to queue up a draw operation.

· void sequence\_key (int seq)

Use the sequence key to toggle the playing of an active pattern in the current screen-set.

void apply\_song\_transpose ()

Apply full song transposition, if enabled.

void update\_window\_title ()

Updates the title shown in the title bar of the window.

void toLower (std::string &)

Converts a string to lower-case letters.

void file\_new ()

A callback function for the File / New menu entry.

• void file open ()

A callback function for the File / Open menu entry.

• void file\_save ()

A callback function for the File / Save menu entry.

void set\_song\_mute (perform::mute\_op\_t op)

Sets the song-mute mode.

void file\_import\_dialog ()

Presents a file dialog to import a MIDI file.

void options\_dialog ()

Opens the File / Options dialog.

void about dialog ()

Presents a Help / About dialog.

void build\_info\_dialog ()

Presents a Help / Version Info dialog.

int query\_save\_changes ()

Queries the user to save the changes made while the application was running.

void new\_open\_error\_dialog ()

Tells the user to close all the edit windows first.

void file\_save\_as (bool do\_export=false)

A callback function for the File / Save As menu entry.

• void file\_exit ()

A callback function for the File / Exit menu entry.

• void new\_file ()

Actually does the work of setting up for a new file.

bool save\_file ()

Saves the current state in a MIDI file.

• void choose\_file ()

Creates a file-chooser dialog.

• bool is\_save ()

If the data is modified, then the user is queried, and the file is save if okayed.

• bool install\_signal\_handlers ()

Installs the signal handlers and pipe code.

• bool signal action (Glib::IOCondition condition)

Handles saving or exiting actions when signalled.

bool edit\_field\_has\_focus () const

Check if one of the edit fields (BPM spinbutton, screenset spinbutton, or the Name field) has focus.

• bool on\_delete\_event (GdkEventAny \*ev)

This callback function handles a delete event from ...?

bool on\_key\_press\_event (GdkEventKey \*ev)

Handles a key press event.

bool on\_key\_release\_event (GdkEventKey \*ev)

Handles a key release event.

virtual void on\_grouplearnchange (bool state)

Notification handler for learn mode toggle.

#### **Static Private Member Functions**

• static void handle\_signal (int sig)

This function is the handler for system signals (SIGUSR1, SIGINT...) It writes a message to the pipe and leaves as soon as possible.

#### **Private Attributes**

• Gtk::Tooltips \* m\_tooltips

A repository for tooltips.

• Gtk::MenuBar \* m menubar

Theses objects support the menu and its sub-menus.

• Gtk::Menu \* m\_menu\_file

The File menu entry.

• Gtk::Menu \* m menu edit

The (new) Edit menu entry.

• Gtk::Menu \* m\_menu\_view

The View menu entry.

• Gtk::Menu \* m menu help

The Help menu entry.

• int m ppqn

Saves the PPQN value obtained from the MIDI file (or the default value, the global ppqn, if SEQ64\_USE\_DEFAUL← T\_PPQN was specified in reading the MIDI file.

• mainwid \* m\_main\_wid

The biggest sub-components of mainwnd.

• maintime \* m\_main\_time

Is this the bar at the top that shows moving squares, also known as "pills"? Why yes, it is.

• perfedit \* m\_perf\_edit

A pointer to the first song/performance editor.

perfedit \* m\_perf\_edit\_2

A pointer to an optional second song/performance editor.

options \* m\_options

A pointer to the program options.

Gdk::Cursor m\_main\_cursor

Mouse cursor?

Gtk::Image \* m\_image\_play

Provides a pointer to hold the images for the pause/play button.

• Gtk::Button \* m\_button\_learn

This button is the learn button, otherwise known as the "L" button.

• Gtk::Button \* m\_button\_stop

Implements the red square stop button.

Gtk::Button \* m\_button\_play

Implements the green triangle play button.

• Gtk::Button \* m\_button\_perfedit

The button for bringing up the Song Editor (Performance Editor).

• Gtk::Label \* m\_label\_jack\_mode

Indicates the current mode of Sequencer64: JACK, Master, and ALSA.

• Gtk::Adjustment \* m\_adjust\_bpm

The spin/adjustment controls for the BPM (beats-per-minute) value.

• Gtk::SpinButton \* m\_spinbutton\_bpm

BPM spin-button object.

Gtk::Adjustment \* m\_adjust\_ss

The spin/adjustment controls for the screenset value.

Gtk::SpinButton \* m spinbutton ss

Screenset adjustment.

• Gtk::Adjustment \* m adjust load offset

The spin/adjustment controls for the load offset value.

• Gtk::SpinButton \* m\_spinbutton\_load\_offset

Spin button for import.

• Gtk::Entry \* m\_entry\_notes

This item provides user-interface access to the screenset notepad editor.

bool m\_is\_running

Holds the current status of running, for use in display the play versus pause icon.

• sigc::connection m\_timeout\_connect

Provides a timeout handler.

• bool m\_menu\_mode

Indicates if the menu bar is to be greyed out or not.

• bool m\_call\_seq\_edit

Indicates that this object is in a mode where the usual mute/unmute keystroke will instead bring up the pattern slot for editing.

• bool m\_call\_seq\_eventedit

Indicates that this object is in a mode where the usual mute/unmute keystroke will instead bring up the pattern slot for event-editing.

# **Static Private Attributes**

• static int m\_sigpipe [2]

This small array holds the "handles" for the pipes need to intercept the system signals SIGINT and SIGUSR1, so that the application shuts down gracefully when aborted.

# **Additional Inherited Members**

# 13.34.1 Constructor & Destructor Documentation

# 13.34.1.1 mainwnd()

This constructor is way too large; it would be nicer to provide a number of well-named initialization functions.

# **Parameters**

р	Refers to the main performance object.
allowperf2	Indicates if a second perfedit window should be created. This is currently a run-time option, selectable in the "user" configuration file.
ppqn	An optional PPQN value to use in the song.

**Todo** Offload most of the work into an initialization function like options does; make the perform parameter a reference; valgrind flags m\_tooltips as lost data, but if we try to manage it ourselves, many more leaks occur.

Edit menu items and their hot keys.

View menu items and their hot keys. It repeats the song editor edit command, just to help those whose muscle memory is already seg32-oriented.

View menu items and their hot keys.

Help menu items

Top panel items, including the logo (updated for the new version of this application) and the "timeline" progress bar.

```
13.34.1.2 ~mainwnd()
seq64::mainwnd::~mainwnd ( ) [virtual]
13.34.2 Member Function Documentation
```

```
13.34.2.1 open_file()
```

We leave the ppqn parameter set to the SEQ64\_USE\_DEFAULT for now, to preserve the legacy behavior of using the global ppqn, and scaling the running time against the PPQN read from the MIDI file. Later, we can provide a value like 0, that will certainly be changed by reading the MIDI file.

We don't need to specify the "oldformat" or "global sequence" parameters of the midifile constructor when reading the MIDI file, since reading handles both the old and new formats, dealing with new constructs only if they are present in the file.

# **Parameters**

fn Provides the file-name for the MIDI file to be opened.

## 13.34.2.5 adj\_callback\_ss()

```
void seq64::mainwnd::adj_callback_ss ( ) [private]
```

Its sets the screen-set value in the Performance/Song window, the Patterns, and something about setting the text based on a screen-set notepad from the Performance/Song window. We let the perform object keep track of modifications.

#### 13.34.2.6 adj\_callback\_bpm()

```
void seq64::mainwnd::adj_callback_bpm ( ) [private]
```

Let the perform object keep track of modifications.

#### 13.34.2.7 edit\_callback\_notepad()

```
void seq64::mainwnd::edit_callback_notepad ( ) [private]
```

Let the perform object keep track of modifications.

#### 13.34.2.8 timer\_callback()

```
bool seq64::mainwnd::timer_callback ( ) [private]
```

It also supports the ALSA pause functionality.

## Note

When Sequencer64 first starts up, and no MIDI tune is loaded, the call to mainwid::update\_markers() leads to trying to do some work on sequences that don't yet exist. Also, if a sequence is changed by the event editor, we get a crash; need to find out how segedit gets away with the changes.

#### 13.34.2.9 set\_play\_image()

# **Parameters**

isrunning

If true, set the image to the "Pause" icon, since playback is running. Otherwise, set it to the "Play" button, since playback is not running.

#### 13.34.2.10 set\_songlive\_image()

Γ	issong	If true, set the image to the "Song" icon. Otherwise, set it to the "Live" button.	1
---	--------	--	---

#### 13.34.2.11 start\_playing()

```
void seq64::mainwnd::start_playing ( ) [private]
```

An accessor to perform::start\_playing(). This function is actually a callback for the pause/play button. Now very similar to perfedit::start\_playing(), except that the implicit songmode == false parameter is used here.

We still need to see if pause\_key() is workable with Stazed JACK support in force. Doesn't pause at present.

#### 13.34.2.12 pause\_playing()

```
void seq64::mainwnd::pause_playing ( ) [private]
```

Currently, it is just the same as stop\_playing(), but we will get it to work.

# 13.34.2.13 stop\_playing()

```
void seq64::mainwnd::stop_playing ( ) [private]
```

An accessor to perform's stop\_playing() function. Also calls the mainwid::update\_sequences\_on\_window() function. Not sure that we need this call, since the slots seem to update anyway. But we've noticed that, with this call in place, hitting the Stop button causes a subtle change in the appearance of the first non-empty pattern of the "allofarow.mid" file.

After the Stop button is pushed (in ALSA mode), then the Space key ("start") doesn't work properly. The song starts, then quickly stops. It doesn't matter if update\_sequences\_on\_window() is called or not. This happens even in seq24! This bug has proven incredibly difficult to track down, still working on it.

# 13.34.2.14 toggle\_playing()

```
void seq64::mainwnd::toggle_playing ( ) [private]
```

Meant only to be called when the "Play" button is pressed, if the pause feature has been compiled into the application.

# 13.34.2.15 learn\_toggle()

```
void seq64::mainwnd::learn_toggle ( ) [inline], [private]
```

Simply forwards the call to perform::learn\_toggle().

```
13.34.2.16 open_performance_edit()
```

```
void seq64::mainwnd::open_performance_edit ( ) [private]
```

We will let perform keep track of modifications, and not just set an is-modified flag just because we opened the song editor. We're going to centralize the modification flag in the perform object, and see if it can work.

```
13.34.2.17 open_performance_edit_2()
```

```
void seq64::mainwnd::open_performance_edit_2 ( ) [private]
```

Experiment: open a second one and see what happens. It works, but one needs to tell the other to redraw if a change is made.

#### 13.34.2.18 enregister\_perfedits()

```
void seq64::mainwnd::enregister_perfedits ( ) [private]
```

# 13.34.2.19 sequence\_key()

# 13.34.2.20 apply\_song\_transpose()

```
void seq64::mainwnd::apply_song_transpose ( ) [private]
```

Then reset the perfedit transpose setting to 0.

#### 13.34.2.21 update\_window\_title()

```
void seq64::mainwnd::update_window_title ( ) [private]
```

Note that the name of the application is obtained by the "(SEQ64\_PACKAGE)" construction.

The format of the caption bar is the name of the package/application, followed by the file-specification (shortened if necessary so that the name of the file itself can be seen), ending with the PPQN value in parentheses.

# 13.34.2.22 toLower()

# 13.34.2.23 file\_new()

```
void seq64::mainwnd::file_new ( ) [inline], [private]
```

Note that every track of the MIDI file will be imported, even if the track is only a label track (without any MIDI events), or a very long track.

The main difference between the Open operation and the Import operation seems to be that the latter can read MIDI files into a screen-set greater than screen-set 0. No, that's not true, so far. No matter what the current screen-set setting, the import is appended after the current data in screen-set 0. Then, if it overflows that screen-set, the overflow goes into the next screen-set.

It might be nice to have the option of importing a MIDI file into a specific screen-set, for better organization, as well as being able to offset the sequence number.

Also, it is important to note that perf().clear\_all() is not called by this routine, as we are merely adding to what might already be there.

```
13.34.2.28 options_dialog()
void seq64::mainwnd::options_dialog ( ) [private]

13.34.2.29 about_dialog()
void seq64::mainwnd::about_dialog ( ) [private]
```

I (Chris) took the liberty of tacking my name at the end, and hope to have done eventually enough work to warrant having it there.

```
13.34.2.30 build_info_dialog()
void seq64::mainwnd::build_info_dialog ( ) [private]
```

It is similar to the "--version" option on the command line.

#### 13.34.2.31 query\_save\_changes()

```
int seq64::mainwnd::query_save_changes ( ) [private]
```

# 13.34.2.32 new\_open\_error\_dialog()

```
void seq64::mainwnd::new_open_error_dialog ( ) [private]
```

#### 13.34.2.33 file\_save\_as()

Please note that Sequencer64 will not adopt the "c\_seq32\_midi" type of file, because it already saves its files in a format that other sequencers should be able to read.

Stazed on the intent of the export functionality:

The original intent was to be able to play an exported song in something like TiMIDIty. After I completed things I realized that there could be an editing benefit as well. I like to record from my MIDI keyboard, improvised to a drum beat, on a long sequence (64 measures). Some is junk, but there are usually parts that I can use. In original seq24, to cut out the good or bad stuff, you would have to search the sequence by listening, then cut and move or copy and paste to a new sequence. It could be done but was always tedious. The paste box for the sequence sometimes made it difficult to find the correct note location, measure, and beat. Also, on a long sequence, you need to zoom out to see the copy location as it played, but zoom in for the precise paste location. In addition if you wanted to change the measure of the notes, it became a trial and error of copy/paste, listen, move, listen, move....

With the added Song editor feature of split trigger to mouse and copy paste trigger to mouse, you can now do all the editing from the song editor. Listen to the sequence, cut out the good or bad parts and reassemble. Move or copy all good trigger parts to the left start and delete all the bad stuff. Now you can use the song export to create the new sequence. Just mute all other tracks and export. Re-import and the new cleaned sequence is already done. Also I use it for importing drum beats from a single '32/'42 file that contains dozens of different styles with intros and endings. I like to sync two instances of '32 or '42 together with jack, then play/experiment with the different beats. If I find something I like, create the song trigger for the part I like in the drum file, export and import.

I actually do not use the song export for anything but editing.

Note that the split trigger variant of Stazed, where it doesn't just split the section in half, is not yet implemented (2016-08-05).

#### **Parameters**

do_export	If true, then just write out the file and don't change the name of the current file based on the
	file-name the user selected. The default value of this parameter is false.

```
13.34.2.34 file_exit()
void seq64::mainwnd::file_exit ( ) [private]

13.34.2.35 new_file()
void seq64::mainwnd::new_file ( ) [private]
```

Not sure that we need to clear the modified flag here, especially since it is now centralizeed in the perform object. Let perf().clear\_all() handle it now.

```
13.34.2.36 save_file()
bool seq64::mainwnd::save_file ( ) [private]
```

Here we specify the current value of m\_ppqn, which was set when reading the MIDI file. We also let midifile tell the perform that saving worked, so that the "is modified" flag can be cleared. The midifile class is already a friend of perform.

```
13.34.2.37 choose_file()
void seq64::mainwnd::choose_file ( ) [private]
```

Change Note layk 2016-10-11 Issue #43 Added filters for upper-case MIDI-file extensions.

#### Returns

Returns true if the signalling was able to be completed, even if it was an unexpected signal.

## 13.34.2.41 edit\_field\_has\_focus()

```
bool seq64::mainwnd::edit_field_has_focus ( ) const [private]
```

#### Returns

Returns true if one of the three editable/modifiable fields has the keyboard focus.

#### 13.34.2.42 on\_delete\_event()

Any changed data is saved. If the pattern is playing, then it is stopped. We now use perform::is\_pattern\_playing().

#### 13.34.2.43 on\_key\_press\_event()

It also handles the control-key and modifier-key combinations matching the entries in its list of if statements.

Also, we now effectively press the CAPS LOCK key for the user if in group-learn mode, via the keystroke::shift\_lock() function.

# 13.34.2.44 on\_key\_release\_event()

Is this worth turning into a switch statement? Or offloading to a perform member function? The latter. Also, we now effectively press the CAPS LOCK key for the user if in group-learn mode. The function that does this is keystroke :: shift\_lock().

**Todo** Test this functionality in old and new application.

#### Returns

Always returns false. This matches seg24 behavior.

### 13.34.2.45 on\_grouplearnchange()

This handler responds to a learn-mode change from perf().

Reimplemented from seq64::performcallback.

```
13.34.3 Field Documentation
13.34.3.1 m_sigpipe
int seq64::mainwnd::m_sigpipe [static], [private]
This static member provides a couple of pipes for signalling/messaging.
13.34.3.2 m_tooltips
Gtk::Tooltips* seq64::mainwnd::m_tooltips [private]
13.34.3.3 m_menubar
Gtk::MenuBar* seq64::mainwnd::m_menubar [private]
The whole menu bar.
13.34.3.4 m_menu_file
Gtk::Menu* seq64::mainwnd::m_menu_file [private]
```

```
13.34.3.5 m_menu_edit
```

Gtk::Menu\* seq64::mainwnd::m\_menu\_edit [private]

#### 13.34.3.6 m\_menu\_view

Gtk::Menu\* seq64::mainwnd::m\_menu\_view [private]

# 13.34.3.7 m\_menu\_help

Gtk::Menu\* seq64::mainwnd::m\_menu\_help [private]

#### 13.34.3.8 m\_ppqn

int seq64::mainwnd::m\_ppqn [private]

We need it early here to be able to pass it along to child objects.

```
13.34.3.9 m_main_wid
```

```
mainwid* seq64::mainwnd::m_main_wid [private]
```

The first is the Patterns Panel, which the mainwid helps implement. We end up sharing this object with perfedit, perfnames, and sequence to allow the sequence to notify the mainwid (indirectly) of the currently-edited sequence.

```
13.34.3.10 m_main_time

maintime* seq64::mainwnd::m_main_time [private]

13.34.3.11 m_perf_edit

perfedit* seq64::mainwnd::m_perf_edit [private]

13.34.3.12 m_perf_edit_2

perfedit* seq64::mainwnd::m_perf_edit_2 [private]
```

The second makes it easy to line up two different patterns that cannot be seen together on one performance editor.

```
13.34.3.13 m_options

options* seq64::mainwnd::m_options [private]

13.34.3.14 m_main_cursor

Gdk::Cursor seq64::mainwnd::m_main_cursor [private]

13.34.3.15 m_image_play

Gtk::Image* seq64::mainwnd::m_image_play [private]

13.34.3.16 m_button_learn

Gtk::Button* seq64::mainwnd::m_button_learn [private]

13.34.3.17 m_button_stop
```

Gtk::Button\* seq64::mainwnd::m\_button\_stop [private]

```
13.34.3.18 m_button_play
Gtk::Button* seq64::mainwnd::m_button_play [private]
If configured to support pause, it also supports the pause pixmap and functionality.
13.34.3.19 m_button_perfedit
Gtk::Button* seq64::mainwnd::m_button_perfedit [private]
13.34.3.20 m_label_jack_mode
Gtk::Label* seq64::mainwnd::m_label_jack_mode [private]
13.34.3.21 m_adjust_bpm
Gtk::Adjustment* seq64::mainwnd::m_adjust_bpm [private]
BPM adjustment object.
13.34.3.22 m_spinbutton_bpm
Gtk::SpinButton* seq64::mainwnd::m_spinbutton_bpm [private]
13.34.3.23 m_adjust_ss
Gtk::Adjustment* seq64::mainwnd::m_adjust_ss [private]
Screenset adjustment.
13.34.3.24 m_spinbutton_ss
Gtk::SpinButton* seq64::mainwnd::m_spinbutton_ss [private]
13.34.3.25 m_adjust_load_offset
Gtk::Adjustment* seq64::mainwnd::m_adjust_load_offset [private]
These controls are used in the File / Import dialog to change where the imported file will be loaded in the sequences
space, which ranges from 0 to 1024 in blocks of 32 patterns. Load number for import.
```

Generated by Doxygen

13.34.3.26 m\_spinbutton\_load\_offset

Gtk::SpinButton\* seq64::mainwnd::m\_spinbutton\_load\_offset [private]

```
13.34.3.27 m_entry_notes
```

```
Gtk::Entry* seq64::mainwnd::m_entry_notes [private]
```

This is just a long text-edit field that can be used to enter a long name or a short description of the current screenset.

#### 13.34.3.28 m\_is\_running

```
bool seq64::mainwnd::m_is_running [private]
```

# 13.34.3.29 m\_timeout\_connect

```
sigc::connection seq64::mainwnd::m_timeout_connect [private]
```

# 13.34.3.30 m\_menu\_mode

```
bool seq64::mainwnd::m_menu_mode [private]
```

This is a "stazed" feature that might be generally useful.

# 13.34.3.31 m\_call\_seq\_edit

```
bool seq64::mainwnd::m_call_seq_edit [private]
```

Currently, the hard-wired key for this function is the equals key.

# 13.34.3.32 m\_call\_seq\_eventedit

```
bool seq64::mainwnd::m_call_seq_eventedit [private]
```

Currently, the hard-wired key for this function is the minus key.

# 13.35 seq64::mastermidibus Class Reference

The class that "supervises" all of the midibus objects?

#### **Public Member Functions**

• mastermidibus (int ppqn=SEQ64\_USE\_DEFAULT\_PPQN, int bpm=c\_beats\_per\_minute)

The mastermidibus default constructor fills the array with our busses.

∼mastermidibus ()

The destructor deletes all of the output busses, clears out the ALSA events, stops and frees the queue, and closes ALSA for this application.

• void init (int ppqn)

Initialize the mastermidibus.

snd\_seq\_t \* get\_alsa\_seq () const

'Getter' function for member m\_alsa\_seq

int get\_num\_out\_buses () const

'Getter' function for member m\_num\_out\_buses

int get\_num\_in\_buses () const

'Getter' function for member m\_num\_in\_buses

void set beats per minute (int bpm)

Set the BPM value (beats per minute).

void set\_ppqn (int ppqn)

Set the PPQN value (parts per quarter note).

• bool filter\_by\_channel () const

'Getter' function for member m\_filter\_by\_channel

void filter\_by\_channel (bool flag)

'Setter' function for member m filter by channel

int get\_beats\_per\_minute () const

'Getter' function for member m\_beats\_per\_minute

int get\_ppqn () const

'Getter' function for member m\_ppqn

std::string get\_midi\_out\_bus\_name (int bus)

Get the MIDI output buss name for the given (legal) buss number.

• std::string get\_midi\_in\_bus\_name (int bus)

Get the MIDI input buss name for the given (legal) buss number.

• void print ()

Print some information about the available MIDI output busses.

· void flush ()

Flushes our local queue events out into ALSA.

• void start ()

Starts all of the configured output busses up to m\_num\_out\_buses.

void stop ()

Stops each of the output busses.

void clock (midipulse tick)

Generates the MIDI clock for each of the output busses.

void continue\_from (midipulse tick)

Gets the output busses running again, if ALSA support is enabled.

void init\_clock (midipulse tick)

Initializes the clock of each of the output busses.

• int poll\_for\_midi ()

Initiate a poll() on the existing poll descriptors.

bool is\_more\_input ()

Test the ALSA sequencer to see if any more input is pending.

bool get\_midi\_event (event \*in)

Grab a MIDI event.

void set\_sequence\_input (bool state, sequence \*seq)

Set the input sequence object, and set the m\_dumping\_input value to the given state.

void dump midi input (event in)

This function augments the recording functionality by looking for a sequence that has a matching channel number, logging the event to that sequence, and then immediately exiting.

• bool is\_dumping () const

'Getter' function for member m\_dumping\_input

• sequence \* get\_sequence () const

'Getter' function for member m\_seq

void sysex (event \*event)

Handle the sending of SYSEX events.

void port\_start (int client, int port)

Start the given ALSA MIDI port.

void port exit (int client, int port)

Turn off the given port for the given client.

void play (bussbyte bus, event \*e24, midibyte channel)

Handle the playing of MIDI events on the MIDI buss given by the parameter, as long as it is a legal buss number.

void set\_clock (bussbyte bus, clock\_e clock\_type)

Set the clock for the given (legal) buss number.

clock\_e get\_clock (bussbyte bus)

Gets the clock setting for the given (legal) buss number.

void set\_input (bussbyte bus, bool inputing)

Set the status of the given input buss, if a legal buss number.

bool get\_input (bussbyte bus)

Get the input for the given (legal) buss number.

## **Private Attributes**

snd\_seq\_t \* m\_alsa\_seq

The ALSA sequencer client handle.

int m\_max\_busses

The maximum number of busses supported.

int m\_num\_out\_buses

The number of output busses.

• int m\_num\_in\_buses

The number of input busses.

midibus \* m\_buses\_out [c\_max\_busses]

Output MIDI busses.

midibus \* m\_buses\_in [c\_max\_busses]

Input MIDI busses.

• midibus \* m\_bus\_announce

MIDI buss announcer?

• bool m\_buses\_out\_active [c\_max\_busses]

Active output MIDI busses.

bool m\_buses\_in\_active [c\_max\_busses]

Active input MIDI busses.

bool m\_buses\_out\_init [c\_max\_busses]

Output MIDI buss initialization.

• bool m buses in init [c max busses]

Input MIDI buss initialization.

• clock\_e m\_init\_clock [c\_max\_busses]

Clock initialization.

bool m\_init\_input [c\_max\_busses]

Input initialization?

• int m\_queue

The ID of the MIDI queue.

• int m\_ppqn

Resolution in parts per quarter note.

int m\_beats\_per\_minute

BPM (beats per minute).

• int m\_num\_poll\_descriptors

The number of descriptors for polling.

• struct pollfd \* m\_poll\_descriptors

Points to the list of descriptors for polling.

• bool m\_dumping\_input

For dumping MIDI input to a sequence for recording.

• std::vector< sequence \* > m\_vector\_sequence

Used for the new "stazed" feature of filtering MIDI channels so that a sequence gets only the channels meant for it.

· bool m filter by channel

If true, the m\_vector\_sequence container is used to divert incoming data to the sequence that has the channel it is meant for.

• sequence \* m seq

Points to the sequence object.

• mutex m\_mutex

The locking mutex.

#### 13.35.1 Constructor & Destructor Documentation

# 13.35.1.1 mastermidibus()

```
seq64::mastermidibus::mastermidibus (
    int ppqn = SEQ64_USE_DEFAULT_PPQN,
    int bpm = c_beats_per_minute )
```

# **Parameters**

ppqn   Provides the PPQN value for this object. However, in most cases, the default,		Provides the PPQN value for this object. However, in most cases, the default,	
SEQ64 USE DEFAULT PPQN should be specified. Then the caller of this		SEQ64_USE_DEFAULT_PPQN should be specified. Then the caller of this constructor should call	
		mastermidibus::set_ppqn() to set up the proper PPQN value.	
	bpm Provides the beats per minute value, which defaults to c_beats_per_minute.		

#### 13.35.1.2 $\sim$ mastermidibus()

```
seq64::mastermidibus::~mastermidibus ( )
```

Valgrind indicates we might have issues caused by the following functions:

```
- snd_config_hook_load()
- snd_config_update_r() via snd_seq_open()
- _dl_init() and other GNU function
- init_gtkmm_internals() [version 2.4]
```

# 13.35.2 Member Function Documentation

```
13.35.2.1 init()
void seq64::mastermidibus::init (
```

int ppqn )

It initializes 16 MIDI output busses, a hardwired constant, SEQ64\_ALSA\_OUTPUT\_BUSS\_MAX == 16. Only one MIDI input buss is initialized.

#### **Parameters**

ppqn The PPQN value to which to initialize the master MIDI buss.

This is done by creating an ALSA tempo structure, adding tempo information to it, and then setting the ALSA sequencer object with this information.

We fill the ALSA tempo structure (snd\_seq\_queue\_tempo\_t) with the current tempo information, set the BPM value, put it in the tempo structure, and give the tempo value to the ALSA queue.

#### Threadsafe

# **Parameters**

bpm Provides the beats-per-minute value to set.

#### 13.35.2.6 set\_ppqn()

```
void seq64::mastermidibus::set\_ppqn (
```

```
int ppqn )
```

This is done by creating an ALSA tempo structure, adding tempo information to it, and then setting the ALSA sequencer object with this information. Fills the tempo structure with the current tempo information. Then sets the ppqn value. Finally, gives the tempo structure to the ALSA queue.

#### Threadsafe

#### **Parameters**

```
ppqn The PPQN value to be set.
```

Provides the output buss number. Checked before usage.

#### Returns

**Parameters** 

Returns the buss name as a standard C++ string, truncated to 80-1 characters. Also contains an indication that the buss is disconnected or unconnected. If the buss number is illegal, this string is empty.

```
13.35.2.12 get_midi_in_bus_name()
```

```
bus Provides the input buss number.
```

# Returns

Returns the buss name as a standard C++ string, truncated to 80-1 characters. Also contains an indication that the buss is disconnected or unconnected.

```
13.35.2.13 print()
void seq64::mastermidibus::print ( )
13.35.2.14 flush()
void seq64::mastermidibus::flush ( )
Threadsafe

13.35.2.15 start()
void seq64::mastermidibus::start ( )
Threadsafe

13.35.2.16 stop()
```

If ALSA support is enable, also drains the output, synchronizes the output queue, and then stop the queue.

Threadsafe

void seq64::mastermidibus::stop ( )

# Threadsafe

tick Provides the tick value with which to set the buss clock.

#### 13.35.2.18 continue\_from()

# Threadsafe

#### **Parameters**

*tick* Provides the tick value to continue from.

# 13.35.2.19 init\_clock()

#### Threadsafe

#### **Parameters**

*tick* Provides the tick value with which to initialize the buss clock.

# 13.35.2.20 poll\_for\_midi()

```
int seq64::mastermidibus::poll_for_midi ( )
```

#### Returns

Returns the result of the poll, or 0 if ALSA is not supported.

## 13.35.2.21 is\_more\_input()

```
bool seq64::mastermidibus::is_more_input ( )
```

#### Threadsafe

#### Returns

Returns true if ALSA is supported, and the returned size is greater than 0, or false otherwise.

#### 13.35.2.22 get\_midi\_event()

First, a rather large buffer is allocated on the stack to hold the MIDI event data. Next, if the –alsa-manual-ports option is not in force, then we check to see if the event is a port-start, port-exit, or port-change event, and we process it, and are done.

Otherwise, we create a "MIDI event parser" and decode the MIDI event.

#### Threadsafe

#### **Parameters**

ine	eV.	The event to be set based on the found input event.
-----	-----	---

We will only get EVENT\_SYSEX on the first packet of MIDI data; the rest we have to poll for. SysEx processing is currently disabled.

#### 13.35.2.23 set\_sequence\_input()

# Threadsafe

#### **Parameters**

state	Provides the dumping-input (recording) state to be set.	
seq	Provides the sequence object to be logged as the mastermidibus's sequence. Can also be used to se	
	a null pointer, to disable the sequence setting.	

#### 13.35.2.24 dump\_midi\_input()

## **Parameters**

ev The event that was recorded, passed as a copy.

# 13.35.2.25 is\_dumping()

```
bool seq64::mastermidibus::is_dumping ( ) const [inline]
```

```
13.35.2.26 get_sequence()
```

The event is sent to all MIDI output busses.

# Threadsafe

#### **Parameters**

ev Provides the event pointer to be set.

# 13.35.2.28 port\_start()

Threadsafe Quite a lot is done during the lock!

## **Parameters**

client	Provides the ALSA client number.
port	Provides the ALSA client port.

# 13.35.2.29 port\_exit()

Both the input and output busses for the given client are stopped, and set to inactive.

#### Threadsafe

# **Parameters**

client	The client to be matched and acted on.	
port	The port to be acted on. Both parameter must be match before the buss is made inactive.	

#### 13.35.2.30 play()

```
void seq64::mastermidibus::play (
          bussbyte bus,
          event * e24,
          midibyte channel )
```

#### Threadsafe

#### **Parameters**

bus	The buss to start play on. Ooh, we just noticed that value should be checked before usage	
e24	The seq24 event to play on the buss.	
channel	The channel on which to play the event.	

# 13.35.2.31 set\_clock()

```
void seq64::mastermidibus::set_clock (
          bussbyte bus,
          clock_e clocktype )
```

The legality checks are a little loose, however.

#### Threadsafe

# **Parameters**

bus	The buss to start play on. Checked before usage.	
clocktype	The type of clock to be set, either "off", "pos", or "mod", as noted in the midibus_common module.	

## 13.35.2.32 get\_clock()

## **Parameters**

	bus	Provides the buss number to read. Checked before usage.
--	-----	---

### Returns

If the buss number is legal, and the buss is active, then its clock setting is returned. Otherwise, e\_clock\_off is returned.

## 13.35.2.33 set\_input()

Why is another buss-count constant, and a global one at that, being used? And I thought there was only one input buss anyway! Well, there is only one ALSA input buss, but more can be used with JACK, apparently.

# Threadsafe

#### **Parameters**

bus	Provides the buss number.
inputing	True if the input bus will be inputting MIDI data.

# 13.35.2.34 get\_input()

```
bool seq64::mastermidibus::get_input (
          bussbyte bus )
```

#### **Parameters**

bus Provides the buss number.
-------------------------------

#### Returns

Always returns false.

#### 13.35.3 Field Documentation

```
13.35.3.1 m_alsa_seq
```

```
snd_seq_t* seq64::mastermidibus::m_alsa_seq [private]
```

## 13.35.3.2 m\_max\_busses

```
int seq64::mastermidibus::m_max_busses [private]
```

Set to c\_max\_busses for now.

#### 13.35.3.3 m\_num\_out\_buses

```
int seq64::mastermidibus::m_num_out_buses [private]
```

# 13.35.3.4 m\_num\_in\_buses

```
int seq64::mastermidibus::m_num_in_buses [private]
```

# 13.35.3.5 m\_buses\_out

```
midibus* seq64::mastermidibus::m_buses_out[c_max_busses] [private]
```

```
13.35.3.6 m_buses_in
midibus* seq64::mastermidibus::m_buses_in[c_max_busses] [private]
13.35.3.7 m_bus_announce
midibus* seq64::mastermidibus::m_bus_announce [private]
13.35.3.8 m_buses_out_active
\verb|bool seq64::mastermidibus::m_buses_out_active[c\_max\_busses]| [private]|
13.35.3.9 m_buses_in_active
bool seq64::mastermidibus::m_buses_in_active[c_max_busses] [private]
13.35.3.10 m buses out init
bool seq64::mastermidibus::m_buses_out_init[c_max_busses] [private]
13.35.3.11 m_buses_in_init
bool seq64::mastermidibus::m_buses_in_init[c_max_busses] [private]
13.35.3.12 m_init_clock
clock_e seq64::mastermidibus::m_init_clock[c_max_busses] [private]
13.35.3.13 m_init_input
bool seq64::mastermidibus::m_init_input[c_max_busses] [private]
13.35.3.14 m_queue
int seq64::mastermidibus::m_queue [private]
13.35.3.15 m_ppqn
int seq64::mastermidibus::m_ppqn [private]
```

```
13.35.3.16 m_beats_per_minute
int seq64::mastermidibus::m_beats_per_minute [private]
We had to lengthen this name; way too easy to confuse it with "bpm" for "beats per measure".
13.35.3.17 m_num_poll_descriptors
int seq64::mastermidibus::m_num_poll_descriptors [private]
13.35.3.18 m_poll_descriptors
struct pollfd* seq64::mastermidibus::m_poll_descriptors [private]
13.35.3.19 m_dumping_input
bool seq64::mastermidibus::m_dumping_input [private]
13.35.3.20 m_vector_sequence
std::vector<sequence *> seq64::mastermidibus::m_vector_sequence [private]
We want to make this a run-time, non-legacy option.
13.35.3.21 m_filter_by_channel
bool seq64::mastermidibus::m_filter_by_channel [private]
13.35.3.22 m_seq
sequence* seq64::mastermidibus::m_seq [private]
13.35.3.23 m_mutex
```

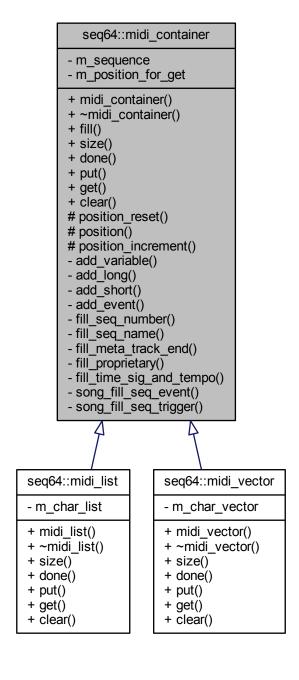

This object is passed to an automutex object that lends exception-safety to the mutex locking.

mutex seq64::mastermidibus::m\_mutex [private]

# 13.36 seq64::midi\_container Class Reference

This class is the abstract base class for a container of MIDI track information.

Inheritance diagram for seq64::midi container:

# **Public Member Functions**

• midi\_container (sequence &seq)

Fills in the few members of this class.

virtual ∼midi container ()

A rote constructor needed for a base class.

void fill (int tracknumber, const perform &p)

This function fills the given track (sequence) with MIDI data from the current sequence, preparatory to writing it to a file.

• virtual std::size\_t size () const

Returns the size of the container, in midibytes.

• virtual bool done () const

Instead of checking for the size of the container when "emptying" it [see the midifile::write() function], use this function, which is overridden to match the type of container being used.

virtual void put (midibyte b)=0

Provides a way to add a MIDI byte into the container.

• virtual midibyte get () const =0

Provide a way to get the next byte from the container.

virtual void clear ()=0

Provides a way to clear the container.

#### **Protected Member Functions**

unsigned int position\_reset () const

'Setter' function for member m\_position\_for\_get Sets the position to 0 and then returns that value.

· unsigned int position () const

'Getter' function for member m\_position\_for\_get Returns the current position.

void position\_increment () const

'Getter' function for member m\_position\_for\_get Increments the current position.

### **Private Member Functions**

• void add\_variable (midipulse v)

This function masks off the lower 8 bits of the long parameter, then shifts it right 7, and, if there are still set bits, it encodes it into the buffer in reverse order.

void add long (midipulse x)

Adds a long value (a MIDI pulse/tick value) to the container.

void add\_short (midishort x)

Adds a short value (two bytes) to the container.

void add\_event (const event &e, midipulse deltatime)

Adds an event to the container.

• void fill\_seq\_number (int seq)

Fills in the sequence number.

void fill seq name (const std::string &name)

Fills in the sequence name.

- void fill\_meta\_track\_end (midipulse deltatime)
- void fill proprietary ()

Fills in the Sequencer64-specific information for the current sequence: The MIDI buss number, the time-signature, and the MIDI channel.

void fill\_time\_sig\_and\_tempo (const perform &p)

Fill in the time-signature and tempo information.

midipulse song\_fill\_seq\_event (const trigger &trig, midipulse prev\_timestamp)

Fills in sequence events based on the trigger and events in the sequence associated with this midi container.

void song\_fill\_seq\_trigger (const trigger &trig, midipulse len, midipulse prev\_timestamp)

Fills in the trigger for the whole sequence.

#### **Private Attributes**

• sequence & m\_sequence

Provide a hook into a sequence so that we can exchange data with a sequence object.

unsigned int m\_position\_for\_get

Provides the position in the container when making a series of get() calls on the container.

#### **Friends**

· class midifile

# 13.36.1 Detailed Description

It is the base class for midi\_list and midi\_vector.

#### 13.36.2 Constructor & Destructor Documentation

```
13.36.2.1 midi_container()
```

#### **Parameters**

sea

Provides a reference to the sequence/track for which this container holds MIDI data.

```
13.36.2.2 \sim midi_container()
```

```
virtual seq64::midi_container::~midi_container ( ) [inline], [virtual]
```

# 13.36.3 Member Function Documentation

#### 13.36.3.1 fill()

```
void seq64::midi_container::fill (
    int tracknumber,
    const perform & p )
```

Note that some of the events might not come out in the same order they were stored in (we see that with program-change events). This function replaces sequence::fill list().

Now, for sequence 0, an alternate format for writing the sequencer number chunk is "FF 00 00". But that format can only occur in the first track, and the rest of the tracks then don't need a sequence number, since it is assumed to increment. This application doesn't use that shortcut.

# Stazed:

```
The "stazed" (seq32) code implements a function like this one using a function sequence::fill_proprietary_list() that we don't need for our implementation... it is part of our midi_container::fill() function.
```

# Triggers:

```
Triggers are added by first calling add_variable(0), which is needed because why? Then 0xFF 0x7F is written, followed by the length value, which is the number of triggers at 3 long integers per trigger, plus the 4-byte code for triggers, c_triggers_new = 0x24240008.
```

Not threadsafe The sequence object bound to this container needs to provide the locking mechanism when calling this function.

#### **Parameters**

tracknumber	Provides the track number. This number is masked into the track information.	
p	The performance object that will hold some of the parameters needed when filling the MIDI	
	container.	

To allow other sequencers to read Seq24/Sequencer64 files, we should provide the Time Signature and Tempo meta events, in the 0th (first) track (sequence). These events must precede any "real" MIDI events. They are not included if the legacy-format option is in force.

```
13.36.3.2 size()
```

```
virtual std::size_t seq64::midi_container::size ( ) const [inline], [virtual]
```

Must be overridden in the derived class, though not pure.

Reimplemented in seq64::midi\_list, and seq64::midi\_vector.

#### 13.36.3.3 done()

```
virtual bool seq64::midi_container::done ( ) const [inline], [virtual]
```

Reimplemented in seq64::midi\_vector, and seq64::midi\_list.

#### 13.36.3.4 put()

The original seq24 container used an std::list and a push\_front operation.

Implemented in seq64::midi\_vector, and seq64::midi\_list.

```
13.36.3.5 get()
virtual midibyte seq64::midi_container::get ( ) const [pure virtual]
It also increments m_position_for_get.
Implemented in seq64::midi vector, and seq64::midi list.
13.36.3.6 clear()
virtual void seq64::midi_container::clear ( ) [pure virtual]
Implemented in seq64::midi_vector, and seq64::midi_list.
13.36.3.7 position_reset()
unsigned int seq64::midi_container::position_reset ( ) const [inline], [protected]
13.36.3.8 position()
unsigned int seq64::midi_container::position ( ) const [inline], [protected]
13.36.3.9 position_increment()
void seq64::midi_container::position_increment ( ) const [inline], [protected]
13.36.3.10 add_variable()
void seq64::midi_container::add_variable (
              midipulse v ) [private]
This function "replaces" sequence::add list var().
Parameters
     The data value to be added to the current event in the MIDI container.
13.36.3.11 add_long()
```

What is the difference between this function and add\_list\_var()? This function "replaces" sequence::add\_long\_list(). This was a *global* internal function called addLongList(). Let's at least make it a private member now, and hew to the naming conventions of this class.

void seq64::midi\_container::add\_long (

midipulse x ) [private]

x Provides the timestamp (pulse value) to be added to the container.

# 13.36.3.12 add\_short()

#### **Parameters**

*x* Provides the timestamp (pulse value) to be added to the container.

#### 13.36.3.13 add\_event()

If the sequence's MIDI channel is EVENT\_NULL\_CHANNEL == 0xFF, then it is the copy of an SMF 0 sequence that the midi\_splitter created. We want to be able to save it along with the other tracks, but won't be able to read it back if all the channels are bad. So we just use the channel from the event.

#### 13.36.3.14 fill\_seq\_number()

Writes 0xFF 0x00 0x02, and then the number. This function is used in the new midifile::write\_song() function, which should be ready to go by the time you're reading this.

Compare this function to the beginning of midi\_container::fill().

# Parameters

```
seq The sequence/track number to write.
```

# 13.36.3.15 fill\_seq\_name()

Writes 0xFF 0x03, and then the track name. This function is used in the new midifile::write\_song() function, which should be ready to go by the time you're reading this.

Compare this function to the beginning of midi\_container::fill().

name

The sequence/track name to set. We could get this item from m\_sequence, but the parameter allows the flexibility to change the name.

Then, if we're not using the legacy output format, we add the "events" for the musical key, musical scale, and the background sequence for the current sequence. Finally, if tranpose support has been compiled into the program, we add that information as well. New feature: save more sequence-specific values, if not legacy format and not saved globally. We use a single byte for the key and scale, and a long for the background sequence. We save these values only if they are different from the defaults; in most cases they will have been left alone by the user. We save per-sequence values here only if the global-background-sequence feature is not in force.

For the new "transposable" flag (tagged by the value c\_transpose) we really only care about saving the value of "false", because otherwise we can assume the value is true for the given sequence, and save space by not saving it... generally only drum patterns will not be transposable.

However, for now, write it anyway for consistency with Seq32.

This function is used only for the first track, The sizes of these meta events are defined as SEQ64\_TIME\_TEMP← O SIZE. However, we do not have to add that value in, as it is already counted in the intrinsic size of the container.

We now make sure that the proper values are part of the perform object for usage in this particular track. For export, we cannot guarantee that the first (0th) track/sequence is exportable.

# Parameters

p Provides the performance object from which we get some global MIDI parameters.

trig	The current trigger to be processed.
prev_timestamp	The time-stamp of the previous event.

#### Returns

The next time-stamp value is returned.

# 13.36.3.20 song\_fill\_seq\_trigger()

For a song-performance, there will be only one trigger, covering the beginning to the end of the fully unlooped track.

#### **Parameters**

trig	The current trigger to be processed.
length	Provides the total length of the sequence.
prev_timestamp	The time-stamp of the previous event, which is actually the first event.

# 13.36.4 Friends And Related Function Documentation

# 13.36.4.1 midifile

```
friend class midifile [friend]
```

## 13.36.5 Field Documentation

#### 13.36.5.1 m\_sequence

```
sequence& seq64::midi_container::m_sequence [private]
```

# 13.36.5.2 m\_position\_for\_get

```
unsigned int seq64::midi_container::m_position_for_get [mutable], [private]
```

# 13.37 seq64::midi\_control Class Reference

This class (formerly a struct) contains the control information for sequences that make up a live set.

#### **Public Member Functions**

• midi\_control ()

This default constructor creates a "zero" object.

- · bool active () const
- bool inverse\_active () const
- · int status () const
- int data () const
- int min value () const
- int max\_value () const
- void set (int values[6])

Not so sure if this really saves trouble for the caller.

• void set (midibyte values[6])

Not so sure if this really saves trouble for the caller.

· bool match (midibyte status, midibyte data) const

Handles a common check in the perform module.

· bool in\_range (midibyte data) const

Handles a common check in the perform module.

#### **Private Attributes**

• bool m\_active

Provides the value for active.

• bool m\_inverse\_active

Provides the value for inverse-active.

• int m\_status

Provides the value for the status.

• int m data

Provides the value for the data.

• int m\_min\_value

Provides the minimum value for the controller.

• int m\_max\_value

Provides the value for the controller.

# 13.37.1 Detailed Description

Note that, although we've converted this to a full-fledged class, the ordering of variables and the data arrays used to fill them is very significant. See the midifile and optionsfile modules.

The perform module sets up the three following arrays for each of the MIDI controls that can be defined in the "rc" file:

```
m_midi_cc_toggle[]
m_midi_cc_on[]
m_midi_cc_off[]

These three arrays are specified in the "rc" by a line like the following:

n [0 0 0 0 0 0] [0 0 0 0 0] [0 0 0 0 0]
```

```
where n ranges from 0 to 73. Lines 0 to 31 provide controller values for
the "pattern group", one line for each of the 32 pattern slots.
Lines 32 to 63 provide controller values for
the "mute in group", one line for each of the 32 pattern slots.
The rest of the lines provide entries for control of:
BPM up, BPM down, Screen-set up, Screen-set down, Mod Replaces, Mod
Snapshot, Mod Queue, Mod gmute (group mute), Mod glearn (group learn),
and Screen-set Play.
In each of the bracketed sections, the values correspond to the members in
this order: m_active, m_inverse_active, m_status, m_data, m_min_value, and
m_max_value.
Why are the status, data, and min/max values long? A character or
midibyte would be enough. We'll fix that later, once we have tested this
stuff. We do need to convert them from long to int, though, and do that
in the scanning and output done by optionsfile.
13.37.2 Constructor & Destructor Documentation
13.37.2.1 midi_control()
seq64::midi_control::midi_control () [inline]
Every member is either false or zero.
13.37.3 Member Function Documentation
13.37.3.1 active()
bool seq64::midi_control::active ( ) const [inline]
13.37.3.2 inverse_active()
bool seq64::midi_control::inverse_active ( ) const [inline]
13.37.3.3 status()
int seq64::midi_control::status ( ) const [inline]
13.37.3.4 data()
int seq64::midi_control::data ( ) const [inline]
13.37.3.5 min_value()
int seq64::midi_control::min_value ( ) const [inline]
13.37.3.6 max_value()
int seq64::midi_control::max_value ( ) const [inline]
13.37.3.7 set() [1/2]
```

It fits in with the big-ass sscanf() call in optionsfile.

int values[6] ) [inline]

void seq64::midi\_control::set (

values	Provides the six values, in an integer array, to set into the members in this order: m_active,
	m_inverse_active, m_status, m_data, m_min_value, and m_max_value.

It fits in with the usage in midifile.

#### **Parameters**

values	Provides the six values, in a byte array, to set into the members in this order: m_active, m_inverse_active,
	m_status, m_data, m_min_value, and m_max_value.

## 13.37.3.9 match()

## **Parameters**

status	Provides the status byte, which is checked against m_status.
data	Provides the data byte, which is checked against m_data.

# 13.37.3.10 in\_range()

## 13.37.4 Field Documentation

# 13.37.4.1 m\_active

```
bool seq64::midi_control::m_active [private]
```

## 13.37.4.2 m\_inverse\_active

```
bool seq64::midi_control::m_inverse_active [private]
```

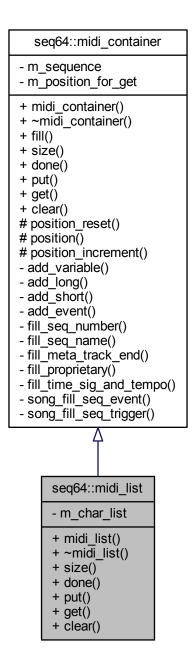

```
13.37.4.3 m_status
int seq64::midi_control::m_status [private]
13.37.4.4 m_data
int seq64::midi_control::m_data [private]
13.37.4.5 m_min_value
int seq64::midi_control::m_min_value [private]
13.37.4.6 m_max_value
```

# 13.38 seq64::midi\_list Class Reference

int seq64::midi\_control::m\_max\_value [private]

This class is the std::list implementation of the midi\_container.

Inheritance diagram for seq64::midi\_list:

## **Public Member Functions**

• midi\_list (sequence &seq)

This constructor fills in the members.

virtual ∼midi\_list ()

A rote constructor needed for a base class.

virtual std::size\_t size () const

Returns the size of the container, in midibytes.

• virtual bool done () const

For popping data from the MIDI list, we are done when the container is empty.

• virtual void put (midibyte b)

Provides a way to add a MIDI byte into the list.

• virtual midibyte get () const

Provide a way to get the next byte from the container.

· virtual void clear ()

Provides a way to clear the container.

## **Private Types**

• typedef std::list< midibyte > CharList

Provides the type of this container.

## **Private Attributes**

· CharList m\_char\_list

The container itself.

#### **Additional Inherited Members**

## 13.38.1 Member Typedef Documentation

```
13.38.1.1 CharList
```

```
typedef std::list<midibyte> seq64::midi_list::CharList [private]
```

This type is basically the same as the midifile::m\_char\_list container in the midifile module.

#### 13.38.2 Constructor & Destructor Documentation

```
13.38.2.1 midi_list()
```

## **Parameters**

seq The sequence/track object that is using this container.

```
13.38.2.2 ∼midi_list()
```

```
\label{list::amidi_list::amidi_list () [inline], [virtual]} virtual \ seq64::midi_list::amidi_list () \ [inline], [virtual]
```

## 13.38.3 Member Function Documentation

```
13.38.3.1 size()
virtual std::size_t seq64::midi_list::size ( ) const [inline], [virtual]
Reimplemented from seq64::midi_container.

13.38.3.2 done()
virtual bool seq64::midi_list::done ( ) const [inline], [virtual]
Reimplemented from seq64::midi_container.

13.38.3.3 put()
virtual void seq64::midi_list::put (
```

The original seq24 list used an std::list and a push\_front operation.

midibyte b ) [inline], [virtual]

Implements seq64::midi container.

```
13.38.3.4 get()
virtual midibyte seq64::midi_list::get ( ) const [inline], [virtual]
```

In this implementation, m\_position\_for\_get is not used. The elements of the container are popped off backward! This modifies the character list, so it has to be mutable.

Implements seq64::midi\_container.

```
13.38.3.5 clear()
virtual void seq64::midi_list::clear ( ) [inline], [virtual]
Implements seq64::midi_container.
```

# 13.38.4 Field Documentation

```
13.38.4.1 m_char_list
CharList seq64::midi_list::m_char_list [mutable], [private]
```

It has to be mutable because the const-function <code>get()</code> actually modifies the container when getting a byte.

# 13.39 seq64::midi\_measures Class Reference

Provides a data structure to hold the numeric equivalent of the measures string "measures:beats:divisions" ("m:b←:d").

#### **Public Member Functions**

• midi\_measures ()

Default constructor for midi\_measures.

midi\_measures (int measures, int beats, int divisions)

Principal constructor for midi\_measures.

• int measures () const

'Getter' function for member m\_measures

• void measures (int m)

'Setter' function for member m\_measures

• int beats () const

'Getter' function for member m\_beats

• void beats (int b)

'Setter' function for member m beats

• int divisions () const

'Getter' function for member m\_divisions

· void divisions (int d)

'Setter' function for member m\_divisions

#### **Private Attributes**

• int m\_measures

The integral number of measures in the measures-based time.

• int m\_beats

The integral number of beats in the measures-based time.

· int m divisions

The integral number of divisions/pulses in the measures-based time.

## 13.39.1 Detailed Description

More commonly known as "bars:beats:ticks", or "BBT".

# 13.39.2 Constructor & Destructor Documentation

measures	Copied into the m_measures member.
beats	Copied into the m_beats member.
divisions	Copied into the m_divisions member.

#### 13.39.3 Member Function Documentation

#### **Parameters**

m The value to which to set the number of measures. We can add validation later.

#### **Parameters**

b The value to which to set the number of beats. We can add validation later.

d The value to which to set the number of divisions. We can add validation later.

#### 13.39.4 Field Documentation

# 13.39.4.1 m\_measures

```
int seq64::midi_measures::m_measures [private]
```

#### 13.39.4.2 m\_beats

```
int seq64::midi_measures::m_beats [private]
```

## 13.39.4.3 m\_divisions

```
int seq64::midi_measures::m_divisions [private]
```

There are two possible translations of the two bytes of a division. If the top bit of the 16 bits is 0, then the time division is in "ticks per beat" (or "pulses per quarter note"). If the top bit is 1, then the time division is in "frames per second". This member deals only with the ticks/beat definition.

# 13.40 seq64::midi\_splitter Class Reference

This class handles the parsing and writing of MIDI files.

## **Public Member Functions**

midi\_splitter (int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

Principal constructor.

~midi\_splitter ()

A rote destructor.

bool log\_main\_sequence (sequence &seq, int seqnum)

Logs the main sequence (an SMF 0 track) for later usage in splitting the track.

· void initialize ()

Resets the SMF 0 support variables in preparation for parsing a new MIDI file.

void increment (int channel)

Processes a channel number by raising its flag in the m\_smf0\_channels[] array.

bool split (perform &p, int screenset)

This function splits an SMF 0 file, splitting all of the channels in the sequence out into separate sequences, and adding each to the perform object.

• int ppqn () const

'Getter' function for member m\_ppqn Provides a way to get the actual value of PPQN used in processing the sequences when parse() was called.

• int count () const

'Getter' function for member m\_smf0\_channels\_count

#### **Private Member Functions**

• bool split\_channel (const sequence &main\_seq, sequence \*seq, int channel)

This function splits the given sequence into new sequences, one for each channel found in the SMF 0 track.

## **Private Attributes**

• int m\_ppqn

Provides the current value of the PPQN, which used to be constant and is now only the macro DEFAULT PPQN.

· bool m use default ppqn

Indicates that the default PPQN is in force.

· int m smf0 channels count

Provides support for SMF 0, indicates how many channels were found in the file in a single sequence.

bool m\_smf0\_channels [16]

Provides support for SMF 0, holds a bool value that indicates the occurrence of a given channel.

sequence \* m\_smf0\_main\_sequence

Provides support for SMF 0, points to the initial SMF 0 sequence, from which the single-channel sequences will be created.

• int m\_smf0\_seq\_number

Provides support for SMF 0, holds the prospective sequence number of the main (SMF 0) sequence.

## 13.40.1 Detailed Description

In addition to the standard MIDI tracks, it also handles some "private" or "proprietary" tracks specific to Seq24. It does not, however, handle SYSEX events.

#### 13.40.2 Constructor & Destructor Documentation

```
13.40.2.1 midi_splitter()
```

#### **Parameters**

ppqn

Provides the initial value of the PPQN setting. It is handled differently for parsing (reading) versus writing the MIDI file.

- · Reading.
  - If set to SEQ64\_USE\_DEFAULT\_PPQN, the legacy application behavior is used. The
    m\_ppqn member is set to the default PPQN, DEFAULT\_PPQN. The value read from the
    MIDI file, ppqn, is then use to scale the running-time of the sequence relative to
    DEFAULT\_PPQN.
  - Otherwise, m\_ppqn is set to the value read from the MIDI file. No scaling is done. Since the value gets written, specify ppqn as 0, an obviously bogus value, to get this behavior.
- Writing. This value is written to the MIDI file in the header chunk of the song. Note that the caller
  must query for the PPQN set during parsing, and pass it to the constructor when preparing to
  write the file. See how it is done in the mainward class.

```
13.40.2.2 \sim midi_splitter()
```

```
seq64::midi_splitter::~midi_splitter ( )
```

#### 13.40.3 Member Function Documentation

## 13.40.3.1 log\_main\_sequence()

/param seq The main sequence to be logged.

/param seqnum The sequence number of the main sequence.

/return Returns true if the main sequence's address was logged, and false if it was already logged.

#### 13.40.3.2 initialize()

```
void seq64::midi_splitter::initialize ( )

13.40.3.3 increment()

void seq64::midi_splitter::increment (
```

int channel )

If it is the first entry for that channel, m\_smf0\_channels\_count is incremented. We won't check the channel number, to save time, until someday we segfault :-D

#### **Parameters**

channel The MIDI channel number. The caller is responsible to make sure it ranges from 0 to 15.

## 13.40.3.4 split()

Lastly, it adds the SMF 0 track as the last track; the user can then examine it before removing it. Is this worth the effort?

There is a little oddity, in that, if the SMF 0 track has events for only one channel, this code will still create a new sequence, as well as the main sequence. Not sure if this is worth extra code to just change the channels on the main sequence and put it into the correct track for the one channel it contains. In fact, we just want to keep it in pattern slot number 16, to keep it out of the way.

р	Provides a reference to the perform object into which sequences/tracks are to be added.
screenset	The screen-set offset to be used when loading a sequence (track) from the file.

#### Returns

Returns true if the parsing succeeded. Returns false if no SMF 0 main sequence was logged.

## 13.40.3.5 ppqn()

```
int seq64::midi_splitter::ppqn ( ) const [inline]
```

The PPQN will be either the global ppqn (legacy behavior) or the value read from the file, depending on the ppqn parameter passed to the midi\_splitter constructor.

#### 13.40.3.6 count()

```
int seq64::midi_splitter::count ( ) const [inline]
```

#### 13.40.3.7 split\_channel()

Note that the events that are read from the MIDI file have delta times. Sequencer64 converts these delta times to cumulative times. We need to preserve that here. Conversion back to delta times is needed only when saving the sequences to a file. This is done in midi\_container::fill().

We have to accumulate the delta times in order to be able to set the length of the sequence in pulses.

Luckily, we don't have to worry about copying triggers, since the imported SMF 0 track won't have any Seq24/← Sequencer24 triggers.

It doesn't set the sequence number of the sequence; that is set when the sequence is added to the perform object.

#### **Parameters**

main_seq	This parameter is the whole SMF 0 track that was read from the MIDI file. It contains all of the channel data that needs to be split into separate sequences.
s	Provides the new sequence that needs to have its settings made, and all of the selected channel events added to it.
channel	Provides the MIDI channel number (re 0) that marks the channel data the needs to be extracted and added to the new sequence.

#### Returns

Returns true if at least one event got added. If none were added, the caller should delete the sequence object represented by parameter *s*.

## 13.40.4 Field Documentation

# 13.40.4.1 m\_ppqn

```
int seq64::midi_splitter::m_ppqn [private]
```

## 13.40.4.2 m\_use\_default\_ppqn

```
bool seq64::midi_splitter::m_use_default_ppqn [private]
```

#### 13.40.4.3 m\_smf0\_channels\_count

```
int seq64::midi_splitter::m_smf0_channels_count [private]
```

SMF 1 file parsing will only warn about more than one channel found in a given sequence.

## 13.40.4.4 m\_smf0\_channels

```
bool seq64::midi_splitter::m_smf0_channels[16] [private]
```

Obviously, we don't have to worry about multiple MIDI busses.

## 13.40.4.5 m\_smf0\_main\_sequence

```
sequence* seq64::midi_splitter::m_smf0_main_sequence [private]
```

## 13.40.4.6 m\_smf0\_seq\_number

```
int seq64::midi_splitter::m_smf0_seq_number [private]
```

We want to be able to add that sequence last, for easier and cleaner removal of that sequence by the user.

# 13.41 seq64::midi\_timing Class Reference

We anticipate the need to have a small structure holding the parameters needed to calculate MIDI times within an arbitrary song.

#### **Public Member Functions**

• midi\_timing ()

Defaults constructor for midi\_timing.

midi\_timing (int bpminute, int bpmeasure, int beatwidth, int ppqn)

Principal constructor for midi\_timing.

• int beats per minute () const

'Getter' function for member m\_beats\_per\_minute

void beats\_per\_minute (int b)

'Setter' function for member m\_beats\_per\_minute

• int beats\_per\_measure () const

'Getter' function for member m beats per measure

void beats\_per\_measure (int b)

'Setter' function for member m\_beats\_per\_measure

int beat\_width () const

'Getter' function for member m\_beats\_per\_beat\_width

void beat width (int bw)

'Setter' function for member m\_beats\_per\_beat\_width

• int ppqn () const

'Getter' function for member m\_ppqn

• void ppqn (int p)

'Setter' function for member m ppgn

#### **Private Attributes**

· int m beats per minute

This value should match the BPM value selected when editing the song.

· int m\_beats\_per\_measure

This value should match the numerator value selected when editing the sequence.

· int m\_beat\_width

This value should match the denominator value selected when editing the sequence.

• int m ppqn

This value provides the precision of the MIDI song.

# 13.41.1 Detailed Description

Although Seq24/Sequencer64 currently are heavily dependent on hard-wired values, that will be rectified eventually, so let us get ready for it.

#### 13.41.2 Constructor & Destructor Documentation

bpminute	Copied into the m_beats_per_minute member.
bpmeasure	Copied into the m_beats_per_measure member.
beatwidth	Copied into the m_beat_width member.
ppqn	Copied into the m_ppqn member.

## 13.41.3 Member Function Documentation

#### **Parameters**

b The value to which to set the number of beats/minute. We can add validation later.

#### **Parameters**

b The value to which to set the number of beats/measure. We can add validation later.

bw

The value to which to set the number of beats in the denominator of the time signature. We can add validation later.

#### **Parameters**

T.

The value to which to set the PPQN member. We can add validation later.

#### 13.41.4 Field Documentation

## 13.41.4.1 m\_beats\_per\_minute

```
int seq64::midi_timing::m_beats_per_minute [private]
```

This value is most commonly set to 120, but is also read from the MIDI file. This value is needed if one want to calculate durations in true time units such as seconds, but is not needed to calculate the number of pulses/ticks/divisions.

#### 13.41.4.2 m\_beats\_per\_measure

```
int seq64::midi_timing::m_beats_per_measure [private]
```

This value is most commonly set to 4.

#### 13.41.4.3 m\_beat\_width

```
int seq64::midi_timing::m_beat_width [private]
```

This value is most commonly set to 4, meaning that the fundamental beat unit is the quarter note.

## 13.41.4.4 m\_ppqn

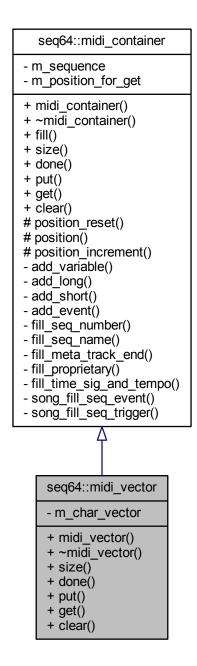

```
int seq64::midi_timing::m_ppqn [private]
```

This value is most commonly set to 192, but is also read from the MIDI file. We are still working getting "non-standard" values to work.

# 13.42 seq64::midi\_vector Class Reference

This class is the std::vector implementation of the  $\mbox{midi\_container}.$ 

Inheritance diagram for seq64::midi\_vector:

# **Public Member Functions**

midi\_vector (sequence &seq)

This constructor fills in the members of this class.

virtual ~midi\_vector ()

A rote constructor needed for a base class.

- virtual std::size\_t size () const
- · virtual bool done () const

For iterating through the data in the MIDI vector, we are done when we've gotten the last element of the container.

virtual void put (midibyte b)

Provides a way to add a MIDI byte into the list.

• virtual midibyte get () const

Provide a way to get the next byte from the container.

• virtual void clear ()

Provides a way to clear the container.

## **Private Types**

typedef std::vector< midibyte > CharVector

Provides the type of this container.

#### **Private Attributes**

· CharVector m char vector

The container itself.

#### **Additional Inherited Members**

# 13.42.1 Member Typedef Documentation

```
13.42.1.1 CharVector
```

```
typedef std::vector<midibyte> seq64::midi_vector::CharVector [private]
```

## 13.42.2 Constructor & Destructor Documentation

```
13.42.2.1 midi_vector()
```

## **Parameters**

seq Provides a reference to the sequence/track for which this container holds MIDI data.

```
13.42.2.2 \simmidi_vector()
```

```
virtual seq64::midi_vector::~midi_vector ( ) [inline], [virtual]
```

## 13.42.3 Member Function Documentation

```
13.42.3.1 size()
virtual std::size_t seq64::midi_vector::size ( ) const [inline], [virtual]
```

#### Returns

Returns the size of the container, in midibytes.

Reimplemented from seq64::midi\_container.

```
13.42.3.2 done()
virtual bool seq64::midi_vector::done ( ) const [inline], [virtual]
```

#### Returns

Returns true if the position is greater than or equal to the size of the character vector.

Reimplemented from seq64::midi\_container.

The original seq24 list used an std::list and a push front operation.

#### **Parameters**

b Provides the MIDI byte to push\_back() into the character vector.

Implements seq64::midi\_container.

```
13.42.3.4 get()
virtual midibyte seq64::midi_vector::get ( ) const [inline], [virtual]
```

In this implementation, m\_position\_for\_get is used. As a side-effect, the position value is incremented.

#### Returns

Returns the next byte in the character vector.

Implements seq64::midi\_container.

```
13.42.3.5 clear()
virtual void seq64::midi_vector::clear ( ) [inline], [virtual]
Implements seq64::midi_container.

13.42.4 Field Documentation

13.42.4.1 m_char_vector
CharVector seq64::midi_vector::m_char_vector [private]
```

# 13.43 seq64::midibus Class Reference

Provides a class for handling the MIDI buss on Linux.

## **Public Member Functions**

• midibus (int localclient, int destclient, int destport, snd\_seq\_t \*seq, const char \*client\_name, const char \*port\_name, int id, int queue, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

Provides a constructor with client number, port number, ALSA sequencer support, name of client, name of port.

• midibus (int localclient, snd\_seq\_t \*seq, int id, int queue, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

Secondary constructor.

• ∼midibus ()

A rote empty destructor.

• bool init\_out ()

Initialize the MIDI output port.

bool init\_in ()

Initialize the MIDI input port.

• bool deinit\_in ()

Deinitialize the MIDI input.

• bool init\_out\_sub ()

Initialize the output in a different way?

• bool init\_in\_sub ()

Initialize the output in a different way?

• void print ()

Prints m\_name.

· const std::string & get\_name () const

'Getter' function for member n\_name

· int get\_id () const

'Getter' function for member m\_id

• void play (event \*e24, midibyte channel)

This play() function takes a native event, encodes it to an ALSA event, and puts it in the queue.

void sysex (event \*e24)

Takes a native SYSEX event, encodes it to an ALSA event, and then puts it in the queue.

void start ()

This function gets the MIDI clock a-runnin', if the clock type is not e\_clock\_off.

• void stop ()

Stop the MIDI buss.

void clock (midipulse tick)

Generates the MIDI clock, starting at the given tick value.

• void continue\_from (midipulse tick)

Continue from the given tick.

void init\_clock (midipulse tick)

Initialize the clock, continuing from the given tick.

void set\_clock (clock\_e clocktype)

'Setter' function for member m\_clock\_type

• clock\_e get\_clock () const

'Getter' function for member m\_clock\_type

void set\_input (bool inputing)

Set status to of "inputting" to the given value.

• bool get\_input () const

'Getter' function for member m\_inputing

• void flush ()

Flushes our local queue events out into ALSA.

• int get client () const

'Getter' function for member m\_dest\_addr\_client The address of client.

• int get\_port () const

'Getter' function for member m\_dest\_addr\_port

## **Static Public Member Functions**

• static void set\_clock\_mod (int clockmod)

Set the clock mod to the given value, if legal.

• static int get\_clock\_mod ()

Get the clock mod value.

## **Private Attributes**

• int m\_id

The ID of the midibus object.

clock\_e m\_clock\_type

The type of clock to use.

• bool m\_inputing

TBD.

• int m\_ppqn

Provides the PPQN value in force, currently a constant.

• snd\_seq\_t \*const m\_seq

ALSA sequencer client handle.

· const int m dest addr client

Destination address of client.

const int m\_dest\_addr\_port

Destination port of client.

· const int m local addr client

Local address of client.

int m\_local\_addr\_port

Local port of client.

• int m\_queue

Another ID of the MIDI queue?

• std::string m\_name

The name of the MIDI buss.

• midipulse m\_lasttick

The last (most recent? final?) tick.

• mutex m\_mutex

Locking mutex.

#### **Static Private Attributes**

• static int m\_clock\_mod

This is another name for "16 \* 4".

## **Friends**

· class mastermidibus

The master MIDI bus sets up the buss.

## 13.43.1 Constructor & Destructor Documentation

```
13.43.1.1 midibus() [1/2]
```

```
seq64::midibus::midibus (
    int localclient,
    int destclient,
    int destport,
    snd_seq_t * seq,
    const char * client_name,
    const char * port_name,
    int id,
    int queue,
    int ppqn = SEQ64_USE_DEFAULT_PPQN )
```

#### **Parameters**

localclient	Provides the local-client number.
destclient	Provides the destination-client number.
destport	Provides the destination-client port.
seq	Provides the ALSA sequence that will work with this buss.
client_name	Provides the client name, but this parameter is unused.
port_name	Provides the port name.
id	Provides the ID code for this bus. It is an index into the midibus definitions array, and is also used in the constructed human-readable buss name.
queue	Provides the queue ID.
ppqn	Provides the PPQN value.

# **13.43.1.2** midibus() [2/2]

```
seq64::midibus::midibus (
    int localclient,
    snd_seq_t * seq,
    int id,
    int queue,
    int ppqn = SEQ64_USE_DEFAULT_PPQN )
```

Similar to the principal constructor, but labels the buss by number more than by name.

#### **Parameters**

localclient	Provides the local-client number.
seq	Provides the sequence that will work with this buss.
id	Provides the ID code for this bus. It is an index into the midibus definitions array, and is also used in the constructed human-readable buss name.
queue	Provides the queue ID.
ppqn	Provides the PPQN value.

## 13.43.1.3 $\sim$ midibus()

```
seq64::midibus::~midibus ()
```

## 13.43.2 Member Function Documentation

## 13.43.2.1 init\_out()

```
bool seq64::midibus::init_out ( )
```

## Returns

Returns true unless setting up ALSA MIDI failed in some way.

## 13.43.2.2 init\_in()

```
bool seq64::midibus::init_in ( )
```

# Returns

Returns true unless setting up ALSA MIDI failed in some way.

# 13.43.2.3 deinit\_in()

```
bool seq64::midibus::deinit_in ( )
```

Set the input and the output ports. The destination port is actually our local port.

#### Returns

Returns true, unless an error occurs.

## 13.43.2.4 init\_out\_sub()

```
bool seq64::midibus::init_out_sub ( )
```

#### Returns

Returns true unless setting up the ALSA port failed in some way.

## 13.43.2.5 init\_in\_sub()

```
bool seq64::midibus::init_in_sub ( )
```

#### Returns

Returns true unless setting up the ALSA port failed in some way.

```
13.43.2.6 print()
```

```
void seq64::midibus::print ( )
```

# 13.43.2.7 get\_name()

```
const std::string& seq64::midibus::get_name ( ) const [inline]
```

## 13.43.2.8 get\_id()

```
int seq64::midibus::get_id ( ) const [inline]
```

## 13.43.2.9 play()

## Threadsafe

#### **Parameters**

e24	The event to be played on this bus.
channel	The channel of the playback.

#### 13.43.2.10 sysex()

```
void seq64::midibus::sysex (
```

```
event * e24)
```

e24 The event to be handled.

## 13.43.2.11 start()

```
void seq64::midibus::start ( )
```

## 13.43.2.12 stop()

```
void seq64::midibus::stop ( )
```

## 13.43.2.13 clock()

#### **Parameters**

*tick* Provides the starting tick.

## 13.43.2.14 continue\_from()

#### **Parameters**

*tick* The continuing tick.

## 13.43.2.15 init\_clock()

#### **Parameters**

tick The starting tick.

```
13.43.2.16 set_clock()
```

```
clocktype The value used to set the clock-type.
```

```
13.43.2.17 get_clock()
```

```
clock_e seq64::midibus::get_clock ( ) const [inline]
```

#### 13.43.2.18 set\_input()

```
void seq64::midibus::set_input (
          bool inputing )
```

If the parameter is true, then init\_in() is called; otherwise, deinit\_in() is called.

## **Parameters**

```
inputing The inputing value to set.
```

```
13.43.2.19 get_input()
```

```
bool seq64::midibus::get_input ( ) const [inline]
```

# 13.43.2.20 flush()

```
void seq64::midibus::flush ( )
```

# 13.43.2.21 get\_client()

```
int seq64::midibus::get_client ( ) const [inline]
```

## 13.43.2.22 get\_port()

```
int seq64::midibus::get_port ( ) const [inline]
```

# 13.43.2.23 set\_clock\_mod()

clockmod If this value is not equal to 0, it is used to set the static member m\_clock\_mod.

```
13.43.2.24 get_clock_mod()
static int seq64::midibus::get_clock_mod ( ) [inline], [static]
```

## 13.43.3 Friends And Related Function Documentation

# 13.44 seq64::midifile Class Reference

This class handles the parsing and writing of MIDI files.

#### **Public Member Functions**

 midifile (const std::string &name, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN, bool oldformat=false, bool globalbgs=true)

Principal constructor.

∼midifile ()

A rote destructor.

bool parse (perform &p, int a\_screen\_set=0)

This function opens a binary MIDI file and parses it into sequences and other application objects.

• bool write (perform &p)

Write the whole MIDI data and Seg24 information out to the file.

- bool write song (perform &p)
- const std::string & error\_message () const

'Getter' function for member m\_error\_message

bool error\_is\_fatal () const

'Getter' function for member m\_error\_is\_fatal

• int ppqn () const

'Getter' function for member m\_ppqn Provides a way to get the actual value of PPQN used in processing the sequences when parse() was called.

#### **Private Member Functions**

bool parse\_smf\_0 (perform &p, int screenset)

This function parses an SMF 0 binary MIDI file as if it were an SMF 1 file, then, if more than one MIDI channel was encountered in the sequence, splits all of the channels in the sequence out into separate sequences.

bool parse\_smf\_1 (perform &p, int screenset, bool is\_smf0=false)

This function parses an SMF 1 binary MIDI file; it is basically the original seq24 midifile::parse() function.

midilong parse\_prop\_header (int file\_size)

Parse the proprietary header, figuring out if it is the new format, or the legacy format, for sequencer-specific data.

· bool parse proprietary track (perform &a perf, int file size)

After all of the conventional MIDI tracks are read, we're now at the "proprietary" Seq24 data section, which describes the various features that Seq24 supports.

• int pow2 (int logbase2)

Internal function for simple calculation of a power of 2 without a lot of math.

bool checklen (midilong len, midibyte type)

Internal function to check for and report a bad length value.

void add\_trigger (sequence &seq, midishort ppqn)

Internal function to make the parser easier to read.

midilong read long ()

Reads 4 bytes of data using read\_byte().

midishort read\_short ()

Reads 2 bytes of data using read\_byte().

• midibyte read\_byte ()

Reads 1 byte of data directly from the m\_data vector, incrementing m\_pos after doing so.

midilong read\_varinum ()

Read a MIDI Variable-Length Value (VLV), which has a variable number of bytes.

• void write long (midilong value)

Writes 4 bytes, each extracted from the long value and shifted rightward down to byte size, using the write\_byte() function.

• void write\_short (midishort value)

Writes 2 bytes, each extracted from the long value and shifted rightward down to byte size, using the write\_byte() function.

• void read\_byte\_array (midibyte \*b, int len)

A helper function to simplify reading midi\_control data from the MIDI file.

• void write byte (midibyte c)

Writes 1 byte.

· void write varinum (midilong)

Writes a MIDI Variable-Length Value (VLV), which has a variable number of bytes.

void write\_track\_name (const std::string &trackname)

Writes out a track name.

std::string read\_track\_name ()

Reads the track name.

• void write seq number (midishort seqnum)

Writes out a sequence number.

• int read\_seq\_number ()

Reads the sequence number.

void write track end ()

Writes out the end-of-track marker.

• bool write header (int numtracks)

We want to write:

void write\_prop\_header (midilong tag, long len)

Writes a "proprietary" (SeqSpec) Seq24 footer header in either the new MIDI-compliant format, or the legacy Seq24 format.

bool write\_proprietary\_track (perform &a\_perf)

Writes out the final proprietary/SeqSpec section, using the new format if the legacy format is not in force.

· long varinum\_size (long len) const

Calculates the length of a variable length value.

long prop\_item\_size (long datalen) const

Calculates the size of a proprietary item, as written by the write\_prop\_header() function, plus whatever is called to write the data.

• long track\_name\_size (const std::string &trackname) const

Calculates the size of a trackname and the meta event that specifies it.

void errdump (const std::string &msg)

Helper function to emit more useful error messages.

void errdump (const std::string &msg, unsigned long p)

Helper function to emit more useful error messages for erroneous long values.

- void write\_track (const midi\_vector &lst)
- long seq\_number\_size () const

Returns the size of a sequence-number event, which is always 5 bytes, plus one byte for the delta time that precedes it.

· long track end size () const

Returns the size of a track-end event, which is always 3 bytes.

• bool is\_sysex\_special\_id (midibyte ch)

Check for special SysEx ID byte.

#### **Private Attributes**

• mutex m\_mutex

Provides locking for the sequence.

• int m\_file\_size

Holds the size of the MIDI file.

std::string m\_error\_message

Holds the last error message, useful for trouble-shooting without having Sequencer64 running in a console window.

bool m\_error\_is\_fatal

Indicates if the error should be considered fatal.

· bool m\_disable\_reported

Indicates that file reading has already been disabled (due to serious errors), so don't complain about it anymore.

int m\_pos

Holds the position in the MIDI file.

· const std::string m\_name

The unchanging name of the MIDI file.

std::vector< midibyte > m\_data

This vector of characters holds our MIDI data.

• std::list< midibyte > m char list

Provides a list of characters.

bool m\_new\_format

Use the new format for the proprietary footer section of the Seq24 MIDI file.

• bool m\_global\_bgsequence

Indicates to store the new key, scale, and background sequence in the global, "proprietary" section of the MIDI song.

• int m\_ppqn

Provides the current value of the PPQN, which used to be constant and is now only the macro DEFAULT\_PPQN.

bool m\_use\_default\_ppqn

Indicates that the default PPQN is in force.

midi\_splitter m\_smf0\_splitter

Provides support for SMF 0.

## 13.44.1 Detailed Description

In addition to the standard MIDI tracks, it also handles some "private" or "proprietary" tracks specific to Seq24. It does not, however, handle SYSEX events.

### 13.44.2 Constructor & Destructor Documentation

## 13.44.2.1 midifile()

## **Parameters**

name Provides the name of the MIDI file to be read or written.

ppqn	Provides the initial value of the PPQN setting. It is handled differently for parsing (reading) versus writing the MIDI file.
	Reading.
	<ul> <li>If set to SEQ64_USE_DEFAULT_PPQN, the legacy application behavior is used. The m_ppqn member is set to the default PPQN, DEFAULT_PPQN. The value read from the MIDI file, ppqn, is then use to scale the running-time of the sequence relative to DEFAULT_PPQN.</li> </ul>
	<ul> <li>Otherwise, m_ppqn is set to the value read from the MIDI file. No scaling is done.</li> <li>Since the value gets written, specify ppqn as 0, an obviously bogus value, to get this behavior.</li> </ul>
	<ul> <li>Writing. This value is written to the MIDI file in the header chunk of the song. Note that the caller must query for the PPQN set during parsing, and pass it to the constructor when preparing to write the file. See how it is done in the mainwand class.</li> </ul>
oldformat	If true, write out the MIDI file using the old Seq24 format, instead of the new MIDI-compliant sequencer-specific format, for the seq24-specific SeqSpec tags defined in the globals module. This option is false by default. Note that this option is only used in writing; reading can handle either format transparently.
globalbgs	If true, write any non-default values of the key, scale, and background sequence to the global "proprietary" section of the MIDI file, instead of to each sequence. Note that this option is only used in writing; reading can handle either format transparently.

## 13.44.2.2 ∼midifile()

```
seq64::midifile::\sim midifile ()
```

# 13.44.3 Member Function Documentation

#### 13.44.3.1 parse()

In addition to the standard MIDI track data in a normal track, Seq24/Sequencer64 adds four sequencer-specific events just before the end of the track:

```
c_triggers_new: SeqSpec FF 7F 1C 24 24 00 08 00 00 ...
c_midibus: SeqSpec FF 7F 05 24 24 00 01 00
c_timesig: SeqSpec FF 7F 06 24 24 00 06 04 04
c_midich: SeqSpec FF 7F 05 24 24 00 02 06

Note that only Sequencer64 adds "FF 7F len" to the SeqSpec data.

Standard MIDI provides for port and channel specification meta events, but they are apparently considered obsolete:
```

```
Obsolete meta-event: Replacement:
MIDI port (buss): FF 21 01 po Device (port) name: FF 09 len text
MIDI channel: FF 20 01 ch
```

What do other applications use for specifying port/channel?

Note the is-modified flag: We now assume that the perform object is starting from scratch when parsing. But we let mainwind tell the perform object when to clear everything with perform::clear\_all(). The mainwind does this for a new file, opening a file, but not for a file import, which might be done simply to add more MIDI tracks to the current composition. So, if parsing succeeds, all we want to do is make sure the flag is set. Parsing a file successfully is not always a modification of the setup. For instance, the first read of a MIDI file should start clean, not dirty.

#### SysEx notes:

Some files (e.g. Dixie04.mid) do not always encode System Exclusive messages properly for a MIDI file. Instead of a varinum length value, they are followed by extended IDs (0x7D, 0x7E, or 0x7F).

We've covered some of those cases by disabling access to m\_data if the position passes the size of the file, but we want try to bypass these odd cases properly. So we look ahead for one of these special values.

Currently, Sequencer64, like Se24, handles SysEx message only to the extend of passing them via MIDI Thru. We hope to improve on that capability.

#### **Parameters**

р	Provides a reference to the perform object into which sequences/tracks are to be added.
screenset	The screen-set offset to be used when loading a sequence (track) from the file. This value ranges
	from -31 to 0 to +31 (32 is the maximum screen-set available in Seq24). This offset is added to the
	sequence number read in for the sequence, to place it elsewhere in the imported tune, and locate
	it in a specific screen-set. If this parameter is non-zero, then we will assume that the perform data
	is dirty.

#### Returns

Returns true if the parsing succeeded. Note that the error status is saved in m\_error\_is\_fatal, and a message (to display later) is saved in m\_error\_message.

#### 13.44.3.2 write()

```
bool seq64::midifile::write ( perform \& p )
```

Also see the write song() function, for exporting to standard MIDI.

Seq24 reverses the order of some events, due to popping from its container. Not an issue here.

## **Parameters**

p | Provides the object that will contain and manage the entire performance.

#### Returns

Returns true if the write operations succeeded.

The PPQN will be either the global ppqn (legacy behavior) or the value read from the file, depending on the ppqn parameter passed to the midifile constructor.

The original sequence remains in place, in sequence slot 16 (the 17th slot). The user is responsible for deleting it if it is not needed.

#### **Parameters**

р	Provides a reference to the perform object into which sequences/tracks are to be added.
screenset	The screen-set offset to be used when loading a sequence (track) from the file.

#### Returns

Returns true if the parsing succeeded.

```
int screenset,
bool is_smf0 = false ) [private]
```

It assumes the file-data has already been read into memory. It also assumes that the ID, track-length, and format have already been read.

If the MIDI file contains both proprietary (c\_timesig) and MIDI type 0x58 then it came from seq42 or seq32 (Stazed versions). In this case the MIDI type is parsed first (because it is listed first) then it gets overwritten by the proprietary, above.

#### **Parameters**

р	Provides a reference to the perform object into which sequences/tracks are to be added.
screenset	The screen-set offset to be used when loading a sequence (track) from the file.
is_smf0	True if we detected that the MIDI file is in SMF 0 format.

#### Returns

Returns true if the parsing succeeded.

#### 13.44.3.9 parse\_prop\_header()

The new format creates a final track chunk, starting with "MTrk". Then comes the delta-time (here, 0), and the event. An event is a MIDI event, a SysEx event, or a Meta event.

A MIDI Sequencer Specific meta message includes either a delta time or absolute time, and the MIDI Sequencer Specific event encoded as follows:

```
0x00 0xFF 0x7F length data
```

For convenience, this function first checks the amount of file data left. If enough, then it reads a long value. If the value starts with  $0 \times 00$  0xFF 0x7F, then that is a SeqSpec event, which signals usage of the new Sequencer64 "proprietary" format. Otherwise, it is probably the old format, and the long value is a control tag  $(0 \times 242400 \text{nn})$ , which can be returned immedidately.

If it is the new format, we back up to the FF, then get the next byte, which should be a 7F. If so, then we read the length (a variable length value) of the data, and then read the long value, which should be the control tag, which, again, is returned by this function.

#### Note

Most sequencers seem to be tolerant of both the lack of an "MTrk" marker and of the presence of an unwrapped control tag, and so can handle both the old and new formats of the final proprietary track.

file_size	The size of the data file. This value is compared against the member m_pos (the position inside	1
	m_data[]), to make sure there is enough data left to process.	

#### Returns

Returns the control-tag value found. These are the values, such as c\_midich, found in the globals module, that indicate the type of sequencer-specific data that comes next. If there is not enough data to process, then 0 is returned.

#### 13.44.3.10 parse\_proprietary\_track()

#### It consists of series of tags:

```
c_midictrl
c_midiclocks
c_notes
c_bpmtag (beats per minute)
c_mutegroups
c_musickey (new, added if usr() global_seq_feature() is true)
c_musicscale (ditto)
c_backsequence (ditto)
```

(There are more tags defined in the globals module, but they are not used in this function. This doesn't quite make sense, as there are also some "triggers" values, and we're pretty sure the application uses them. Oh, it turns out that they are set up by actions performed on each sequence, and are stored as sequencer-specific ("SeqSpec") data with each track's data as held in the MIDI container for the track. See the midi\_container module for more information.)

The format is (1) tag  ${\tt ID}$ ; (2) length of data; (3) the data.

First, we separate out this function for a little more clarity. Then we added code to handle reading both the legacy Seq24 format and the new, MIDI-compliant format. Note that even the new format is not quite correct, since it doesn't handle a MIDI manufacturer's ID, making it a single byte that is part of the data. But it does have the "MTrk" marker and track name, so that must be processed for the new format.

Now, in our "midicvt" project, we have a test MIDI file, b4uacuse-non-mtrk.midi that is good, except for having a tag "MUnk" instead of "MTrk". We should consider being more permissive, if possible. Otherwise, though, the only penality is that the "proprietary" chunk is completely skipped.

#### **Parameters**

р	The performance object that is being set via the incoming MIDI file.
file_size	The file size as determined in the parse() function.

There are also implicit parameters, with the m\_pos and m\_new\_format member variables.

### 13.44.3.11 pow2()

Use for calculating the denominator of a time signature.

### **Parameters**

logbase2	Provides the power to which 2 is to be raised. This integer is probably only rarely greater than 4
	(which represents a denominator of 16).

#### Returns

Returns 2 raised to the logbase2 power.

### 13.44.3.12 checklen()

A length of zero is now considered legal, but a "warning" message is shown. The largest value allowed within a MIDI file is 0x0FFFFFF. This limit is set to allow variable-length quantities to be manipulated as 32-bit integers.

#### **Parameters**

len	The length value to be checked, and it should be greater than 0. However, we have seen files with zero-length events, such as Lyric events (0x05).
type	The type of meta event. Used for displaying an error.

#### Returns

Returns true if the length parameter is valid. This now means it is simply less than 0x0FFFFFFF.

# 13.44.3.13 add\_trigger()

Handles only c\_triggers\_new values, not the old c\_triggers value. If m\_ppqn isn't set to the default value, then we must scale these triggers accordingly, just as is done for the MIDI events.

#### **Parameters**

seq	Provides the sequence to which the trigger is to be added.	
ppqn	pqn Provides the ppqn value to use to scale the tick values if m_use_default_ppqn is true. If 0, the ppqn	
	value is not used.	

### 13.44.3.14 read\_long()

```
midilong seq64::midifile::read_long ( ) [private]
```

#### Warning

This code looks endian-dependent and integer-size dependent.

#### Returns

Returns the four bytes, shifted appropriately and added together, most-significant byte first, to sum to a long value.

### 13.44.3.15 read\_short()

```
midishort seq64::midifile::read_short ( ) [private]
```

### Returns

Returns the two bytes, shifted appropriately and added together, most-significant byte first, to sum to a short value.

### 13.44.3.16 read\_byte()

```
midibyte seq64::midifile::read_byte ( ) [private]
```

### Returns

Returns the byte that was read. Returns 0 if there was an error, though there's no way for the caller to determine if this is an error or a good value.

# 13.44.3.17 read\_varinum()

```
midilong seq64::midifile::read_varinum ( ) [private]
```

This function reads the bytes while bit 7 is set in each byte. Bit 7 is a continuation bit. See write\_varinum() for more information.

#### Returns

Returns the accumulated values as a single number.

# 13.44.3.18 write\_long()

# Warning

This code looks endian-dependent.

x The long value to be written to the MIDI file.

# 13.44.3.19 write\_short()

# Warning

This code looks endian-dependent.

#### **Parameters**

*x* The short value to be written to the MIDI file.

# 13.44.3.20 read\_byte\_array()

# **Parameters**

b		The byte array to receive the data.
le	n	The number of bytes in the array, and to be read.

# 13.44.3.21 write\_byte()

The byte is written to the m\_char\_list member, using a call to push\_back().

# **Parameters**

c The MIDI byte to be "written".

### 13.44.3.22 write\_varinum()

A MIDI file Variable Length Value is stored in bytes. Each byte has two parts: 7 bits of data and 1 continuation bit. The highest-order bit is set to 1 if there is another byte of the number to follow. The highest-order bit is set to 0 if this byte is the last byte in the VLV.

To recreate a number represented by a VLV, first you remove the continuation bit and then concatenate the leftover bits into a single number.

To generate a VLV from a given number, break the number up into 7 bit units and then apply the correct continuation bit to each byte.

In theory, you could have a very long VLV number which was quite large; however, in the standard MIDI file specification, the maximum length of a VLV value is 5 bytes, and the number it represents can not be larger than 4 bytes.

Here are some common cases:

```
    Numbers between 0 and 127 (0x7F) are represented by a single byte.
    0x80 is represented as "0x81 0x00".
    0x0FFFFFFFF (the largest number) is represented as "0xFF 0xFF 0xFF".
```

Also see the varinum size() function.

#### **Parameters**

value The long value to be encoded as a MIDI varinum, and written to the MIDI file.

### 13.44.3.23 write\_track\_name()

Note that we have to precede this "event" with a delta time value, set to 0. The format of the output is "0x00 0xFF 0x03 len track-name-bytes".

# **Parameters**

```
trackname Provides the name of the track to be written to the MIDI file.
```

# 13.44.3.24 read\_track\_name()

```
std::string seq64::midifile::read_track_name ( ) [private]
```

Meant only for usage in the proprietary/SeqSpec footer track, in the new file format.

#### Returns

Returns the track name, or an empty string if there was a problem.

# 13.44.3.25 write\_seq\_number()

The format is "00 FF 00 02 ss ss", where "02" is actually the constant length of the data. We have to precede these values with a 0 delta time, of course.

Now, for sequence 0, an alternate format is "FF 00 00". But that format can only occur in the first track, and the rest of the tracks then don't need a sequence number, since it is assumed to increment. Our application doesn't bother with that shortcut.

#### **Parameters**

	seqnum	The sequence number to write.
--	--------	-------------------------------

# 13.44.3.26 read\_seq\_number()

```
int seq64::midifile::read_seq_number ( ) [private]
```

Meant only for usage in the proprietary/SeqSpec footer track, in the new file format.

#### Returns

Returns the sequence number found, or -1 if it was not found.

#### 13.44.3.27 write\_track\_end()

```
void seq64::midifile::write_track_end ( ) [private]
```

#### 13.44.3.28 write\_header()

- 0x4D54726B. The track tag "MTrk". The MIDI spec requires that software can skip over non-standard chunks.
   "Prop"? Would require a fix to midicvt.
- 0xaabbccdd. The length of the track. This needs to be calculated somehow.
- 0x00. A zero delta time.
- 0x7f7f. Sequence number, a special value, well out of normal range.
- · The name of the track:
  - "Seq24-Spec"
  - "Sequencer64-S"

Then follows the proprietary/SeqSpec data, written in the normal manner. Finally, tack on the track-end meta-event.

Components of final track size:

```
-# Delta time. 1 byte, always 0x00.
-# Sequence number. 5 bytes. OPTIONAL. We won't write it.
-# Track name. 3 + 10 or 3 + 15
-# Series of proprietary/SeqSpec specs:
    -# Prop header:
    -# If legacy format, 4 bytes.
    -# Otherwise, 2 bytes + varinum_size(length) + 4 bytes.
    -# Length of the prop data.
-# Track End. 3 bytes.
```

#### 13.44.3.29 write\_prop\_header()

This function does not write the data. It replaces calls such as "write\_long(c\_midich)" in the proprietary secton of write().

The legacy format just writes the control tag (0x242400xx). The new format writes 0x00 0xFF 0x7F len 0x242400xx; the first 0x00 is the delta time.

In the new format, the 0x24 is a kind of "manufacturer ID". At http://www.midi.org/techspecs/manid. php we see that most manufacturer IDs start with 0x00, and are thus three bytes long, or start with codes at 0x40 and above. Similary, this site shows that no manufacturer uses 0x24:

```
http://sequence15.blogspot.com/2008/12/midi-manufacturer-ids.html
```

# Warning

Currently, the manufacturer ID is not handled; it is part of the data, which can be misleading in programs that analyze MIDI files.

# **Parameters**

control_tag	Determines the type of sequencer-specific section to be written. It should be one of the value in the globals module, such as c_midibus or c_mutegroups.	
data_length	th The amount of data that will be written. This parameter does not count the length of the header itself.	

# 13.44.3.30 write\_proprietary\_track()

The first thing to do, for the new format only, is calculate the length of this big section of data. This was quite tricky; we tweaked and adjusted until the midicvt program handled the whole new-format file without emitting any errors.

Here's the basics of what Seq24 did for writing the data in this part of the file:

```
-# Write the c_midictrl value, then write a 0. To us, this looks like
no one wrote any code to write this data. And yet, the parsing
```

```
code can handles a non-zero value, which is the number of sequences
as a long value, not a byte. So shouldn't we write 4 bytes, not
one? Yes, indeed, we made a mistake. However, we should be
writing out the full data set as well. But not even Seq24 does
that! Perhaps they decided it was best kept in the "rc"
configuration file.
# MORE TO COME.
```

p Provides the object that will contain and manage the entire performance.

#### Returns

Always returns true. No efficient way to check all of the writes that can happen. Might revisit this issue if some bug crops up.

# 13.44.3.31 varinum\_size()

This function is needed when calculating the length of a track. Note that it handles only the following situations:

```
https://en.wikipedia.org/wiki/Variable-length_quantity
```

This restriction allows the calculation to be simple and fast.

```
1 byte: 0x00 to 0x7F
2 bytes: 0x80 to 0x3FFF
3 bytes: 0x4000 to 0x001FFFFF
4 bytes: 0x200000 to 0x0FFFFFFF
```

#### **Parameters**

len The long value whose length, when encoded as a MIDI varinum, is to be found.

# Returns

Returns values as noted above. Anything beyond that range returns 0.

#### 13.44.3.32 prop\_item\_size()

If using the new format, the length includes the sum of sequencer-specific tag (0xFF 0x7F) and the size of the variable-length value. Then, for legacy and new format, 4 bytes are added for the Seq24 MIDI control value, and then the data length is added.

data_length	Provides the data length value to be encoded.	
-------------	---	--

# Returns

Returns the length of the item size, including the delta time, meta bytes, length byes, the control tag, and the data-length itself.

# 13.44.3.33 track\_name\_size()

#### **Parameters**

trackname	Provides the name of the track to be written to the MIDI file.
-----------	--

#### Returns

Returns the length of the event, which is of the format "0x00 0xFF 0x03 len track-name-bytes".

It adds the file offset to the message.

# **Parameters**

msg The main error message string, without an ending newline character.

# Returns

The constructed string is returned as a side-effect, in case we want to pass it along to the externally-accessible error-message buffer.

# 

It adds the file offset to the message.

msg	The main error message string, without an ending newline character.
value	The long value to show as part of the message.

#### Returns

The constructed string is returned as a side-effect, in case we want to pass it along to the externally-accessible error-message buffer.

#### **Parameters**

*ch* Provides the byte to be checked against 0x7D through 0x7F.

# Returns

Returns true if the byte is SysEx special ID.

# 13.44.4 Field Documentation

# 13.44.4.1 m\_mutex

```
mutex seq64::midifile::m_mutex [mutable], [private]
```

Made mutable for use in certain locked getter functions.

### 13.44.4.2 m\_file\_size

```
int seq64::midifile::m_file_size [private]
```

This variable was added when loading a file that caused an attempt to load data well beyond the file-size of the midicvt test file Dixie04.mid.

#### 13.44.4.3 m\_error\_message

```
std::string seq64::midifile::m_error_message [private]
```

If empty, there's no pending error. Currently most useful in the parse() function.

### 13.44.4.4 m\_error\_is\_fatal

```
bool seq64::midifile::m_error_is_fatal [private]
```

The caller can query for this value after getting the return value from parse().

### 13.44.4.5 m\_disable\_reported

```
bool seq64::midifile::m_disable_reported [private]
```

Once is enough.

# 13.44.4.6 m\_pos

```
int seq64::midifile::m_pos [private]
```

This is at least a 31-bit value in the recent architectures running Linux and Windows, so it will handle up to 2 Gb of data. This member is used as the offset into the m data vector.

### 13.44.4.7 m\_name

```
const std::string seq64::midifile::m_name [private]
```

# 13.44.4.8 m\_data

```
std::vector<midibyte> seq64::midifile::m_data [private]
```

We could also use a string of characters, unsigned. This member is resized to the putative size of the MIDI file, in the parse() function. Then the whole file is read into it, as if it were an array. This member is an input buffer.

```
13.44.4.9 m_char_list
```

```
std::list<midibyte> seq64::midifile::m_char_list [private]
```

The class pushes each MIDI byte into this list using the write\_byte() function. Also note that the write() function calls sequence::fill\_list() to fill a temporary std::list<char> (!) buffer, then writes that data backwards to this member. This member is an output buffer.

```
13.44.4.10 m new format
```

```
bool seq64::midifile::m_new_format [private]
```

In the new format, each sequencer-specific value (0x242400xx, as defined in the globals module) is preceded by the sequencer-specific prefix, 0xFF 0x7F len id/date). By default, the new format is used, but the user can specify the —legacy (-I) option, or make a soft link to the sequence24 binary called "seq24", to write the data in the old format. [We will eventually add the —legacy option to the "rc" configuration file.] Note that reading can handle either format transparently.

# 13.44.4.11 m\_global\_bgsequence

```
bool seq64::midifile::m_global_bgsequence [private]
```

# 13.44.4.12 m\_ppqn

```
int seq64::midifile::m_ppqn [private]
```

# 13.44.4.13 m\_use\_default\_ppqn

```
bool seq64::midifile::m_use_default_ppqn [private]
```

# 13.44.4.14 m\_smf0\_splitter

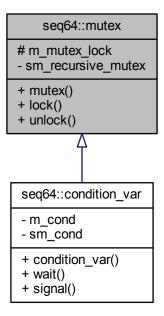

```
midi_splitter seq64::midifile::m_smf0_splitter [private]
```

This object holds all of the information needed to split a multi-channel sequence.

# 13.45 seq64::mutex Class Reference

The mutex class provides a simple wrapper for the pthread\_mutex\_t type used as a recursive mutex.

Inheritance diagram for seq64::mutex:

# **Public Member Functions**

• mutex ()

The constructor assigns the recursive mutex to the local locking mutex.

· void lock () const

Lock the mutex.

· void unlock () const

Unlock the mutex.

# **Protected Attributes**

pthread\_mutex\_t m\_mutex\_lock

Provides a mutex lock usable by a single module or class.

# **Static Private Attributes**

• static const pthread\_mutex\_t sm\_recursive\_mutex

Provides a recursive mutex that can be used by the whole application, and is, apparently.

# 13.45.1 Constructor & Destructor Documentation

```
13.45.1.1 mutex()
seq64::mutex::mutex ( )
```

### 13.45.2 Member Function Documentation

```
13.45.2.1 lock()

void seq64::mutex::lock ( ) const

13.45.2.2 unlock()

void seq64::mutex::unlock ( ) const
```

### 13.45.3 Field Documentation

### 13.45.3.1 sm\_recursive\_mutex

```
const pthread_mutex_t seq64::mutex::sm_recursive_mutex [static], [private]
```

Define the static recursive mutex and its condition variable.

```
13.45.3.2 m_mutex_lock
pthread_mutex_t seq64::mutex::m_mutex_lock [mutable], [protected]
```

However, this mutex ends up being a copy of the static sm\_recursive\_mutex (and, of course, a different "object").

# 13.46 seq64::editable\_event::name\_value\_t Struct Reference

Provides a type that contains the pair of values needed for the various lookup maps that are needed to manage editable events.

### **Data Fields**

- unsigned short event\_value
  - Holds a midibyte value (0x00 to 0xFF) or SEQ64\_END\_OF\_MIDIBYTE\_TABLE to indicate the end of an array of name\_value\_t items.
- std::string event\_name

Holds the human-readable name for an event code or other numeric value in an array of name\_value\_t items.

### 13.46.1 Field Documentation

# 13.46.1.1 event\_value

```
unsigned short seq64::editable_event::name_value_t::event_value
```

#### 13.46.1.2 event\_name

std::string seq64::editable\_event::name\_value\_t::event\_name

# 13.47 seq64::options Class Reference

This class supports a full tabbed options dialog.

Inherits Dialog.

#### **Public Member Functions**

• options (Gtk::Window &parent, perform &p)

# **Private Types**

```
    enum button {
    e_jack_transport,
    e_jack_master,
    e_jack_master_cond,
    e_jack_start_mode_live,
    e_jack_start_mode_song,
    e_jack_connect,
    e_jack_disconnect }
```

Defines buttons indices or IDs for some controls related to JACK.

# **Private Member Functions**

```
• perform & perf ()
```

'Getter' function for member m\_mainperf

- void add\_mouse\_page ()
- void add\_jack\_sync\_page ()

### **Private Attributes**

• Gtk::Tooltips \* m\_tooltips

A repository for GTK tooltip support.

· perform & m\_mainperf

The performance object to which some of these options apply.

• Gtk::Button \* m\_button\_ok

The famous "OK" button's pointer.

Gtk::CheckButton \* m\_button\_jack\_transport

Main JACK transport selection.

• Gtk::CheckButton \* m\_button\_jack\_master

Main JACK transport master selection.

• Gtk::CheckButton \* m\_button\_jack\_master\_cond

Main JACK transport master-conditional selection.

• Gtk::Button \* m\_button\_jack\_connect

JACK Connect button, which we need to enable/disable for clarity and some additional safety.

Gtk::Button \* m\_button\_jack\_disconnect

JACK Disonnect button, which we need to enable/disable for clarity and some additional safety.

• Gtk::Notebook \* m notebook

Not sure yet what this notebook is for.

#### 13.47.1 Member Enumeration Documentation

### 13.47.1.1 button

```
enum seq64::options::button [private]
```

These values are handled in options::transport\_callback(). Some of them set JACK-related values in the rc\_settings object, while the others set up or tear down the JACK support of sequencer64.

The JACK Transport settings are a little messy. They should be radio buttons, and control each other's settings. Currently, if the user wants to set up for JACK Master, the JACK Transport button must also be checked.

### **Enumerator**

e jack transport	Turns on the "with JACK Transport" option, rc_settings::with_jack_transport().
e_jack_master	Turns on the "with JACK Master" option, rc_settings::with_jack_master(). If another application is already JACK Master, this will fail.
e_jack_master_cond	Turns on the "with JACK Master" option rc_settings::with_jack_master_cond().  This option makes sequencer64 the JACK Master conditionally, that is, if no other application has claimed that role.
e_jack_start_mode_live	Doesn't directly do anything; the live mode versus song mode is set by the e_jack_start_mode_song value.
e_jack_start_mode_song	Sets the "JACK start mode" value to true, which means that sequencer64 is in song mode. This value is obtained via rc_settings::song_start_mode(). It will eventually be the start mode that applies to either ALSA or JACK playback.
e_jack_connect	Causes the perform object's JACK initialization function, perform::init_jack(), to be called.
e_jack_disconnect	Causes the perform object's JACK deinitialization function, perform::deinit_jack(), to be called.

# 13.48 seq64::optionsfile Class Reference

Provides a file for reading and writing the application' main configuration file.

Inheritance diagram for seq64::optionsfile:

# **Public Member Functions**

• optionsfile (const std::string &name)

Principal constructor.

∼optionsfile ()

A rote destructor.

• bool parse (perform &perf)

Parse the  $\sim$ /.seq24rc or  $\sim$ /.config/sequencer64/sequencer64.rc file.

• bool write (const perform &perf)

This options-writing function is just about as complex as the options-reading function.

# **Private Member Functions**

• bool error\_message (const std::string &sectionname)

Helper function for error-handling.

### **Additional Inherited Members**

# 13.48.1 Detailed Description

The settings that are passed around are provided or used by the perform class.

# 13.48.2 Constructor & Destructor Documentation

# 13.48.2.1 optionsfile()

### **Parameters**

name Provides the name of the options file; this is usually a full path file-specification.

# 13.48.2.2 $\sim$ optionsfile()

```
seq64::optionsfile::\simoptionsfile ()
```

# 13.48.3 Member Function Documentation

### 13.48.3.1 parse()

#### [midi-control]

Get the number of sequence definitions provided in the [midi-control] section. Ranges from 32 on up. Then read in all of the sequence lines. The first 32 apply to the first screen set. There can also be a comment line "# mute in group" followed by 32 more lines. Then there are addditional comments and single lines for BPM up, BPM down, Screen Set Up, Screen Set Down, Mod Replace, Mod Snapshot, Mod Queue, Mod Gmute, Mod Glearn, and Screen Set Play. These are all forms of MIDI automation useful to control the playback while not sitting near the computer.

#### [mute-group]

The mute-group starts with a line that indicates up to 32 mute-groups are defined. A common value is 1024, which means there are 32 groups times 32 keys. But this value is currently thrown away. This value is followed by 32 lines of data, each contained 4 sets of 8 settings. See the seq24-doc project on GitHub for a much more detailed description of this section.

### [midi-clock]

The MIDI-clock section defines the clocking value for up to 16 output busses. The first number, 16, indicates how many busses are specified. Generally, these busses are shown to the user with names such as "[1] seq24 1".

#### [keyboard-control]

The keyboard control defines the keys that will toggle the stage of each of up to 32 patterns in a pattern/sequence box. These keys are displayed in each box as a reminder. The first number specifies the Key number, and the second number specifies the Sequence number.

# [keyboard-group]

The keyboard group specifies more automation for the application. The first number specifies the Key number, and the second number specifies the Group number. This section should be better described in the seq24-doc project on GitHub.

# [extended-keys]

Additional keys (not yet represented in the Options dialog) to support additional keys for tempo-tapping, Seq32's new transport and connection functionality, and maybe a little more.

# [New-keys]

Conditional support for reading Seq32 "rc" files.

# [jack-transport]

This section covers various JACK settings, one setting per line. In order, the following numbers are specified:

```
- jack_transport - Enable sync with JACK Transport.
- jack_master - Seq24 will attempt to serve as JACK Master.
- jack_master_cond - Seq24 will fail to be Master if there is already a Master set.
- song_start_mode:
- 0 = Playback will be in Live mode. Use this to allow muting and unmuting of loops.
- 1 = Playback will use the Song Editor's data.
```

### [midi-input]

This section covers the MIDI input busses, and has a format similar to "[midi-clock]". Generally, these busses are shown to the user with names such as "[1] seq24 1", and currently there is only one input buss. The first field is the port number, and the second number indicates whether it is disabled (0), or enabled (1).

[midi-clock-mod-ticks]

This section covers.... One common value is 64.

[manual-alsa-ports]

Set to 1 if you want seg24 to create its own ALSA ports and not connect to other clients.

[last-used-dir]

This section simply holds the last path-name that was used to read or write a MIDI file. We still need to add a check for a valid path, and currently the path must start with a "/", so it is not suitable for Windows.

[interaction-method]

This section specified the kind of mouse interaction.

- 0 = 'seq24' (original Seq24 method).
- 1 = 'fruity' (similar to a certain fruity sequencer we like).

The second data line is set to "1" if Mod4 can be used to keep seq24 in note-adding mode even after the right-click is released, and "0" otherwise.

#### **Parameters**

p Provides the performance object to which all of these options apply.

# Returns

Returns true if the file was able to be opened for reading. Currently, there is no indication if the parsing actually succeeded.

Implements seq64::configfile.

# 13.48.3.2 write()

#### Parameters

*p* Provides a const reference to the main perform object. However, we have to cast away the constness, because too many of the perform getter functions are used in non-const contexts.

### Returns

Returns true if the write operations all succeeded.

New boolean to show sequence numbers; ignored in legacy mode.

Implements seq64::configfile.

```
13.48.3.3 error_message()
```

### **Parameters**

# Returns

Always returns false.

# 13.49 seq64::perfedit Class Reference

This class supports a Performance Editor that is used to arrange the patterns/sequences defined in the patterns panel.

Inheritance diagram for seq64::perfedit:

# **Public Member Functions**

- perfedit (perform &p, bool second\_perfedit=false, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

  Principal constructor, has a reference to a perform object.
- virtual ~perfedit ()

This rote destructor does nothing.

• void init\_before\_show ()

This function forwards its call to the perfroll function of the same name.

void enqueue\_draw (bool forward=true)

Helper wrapper for calling perfroll::queue\_draw() for one or both perfedits.

void enregister\_peer (perfedit \*peer)

Register the peer perfedit object.

void set zoom (int z)

Implements the horizontal zoom feature.

bool get\_toggle\_jack ()

Gets the state fo the JACK toggle button in the Song editor, when compiled with seq32 JACK support.

void toggle\_jack ()

Sets the state fo the JACK toggle button in the Song editor, when compiled with seg32 JACK support.

void rewind (bool press)

Implements the seq32/stazed rewind operation.

void fast\_forward (bool press)

Implements the seq32/stazed fast-forward operation.

void set\_follow\_transport ()

Sets the transport status when compiled for seq32 JACK support.

void toggle\_follow\_transport ()

Toggles the transport status when compiled for seq32 JACK support.

void set jack mode ()

Sets the JACK transport status, based on the status of the JACK button in the Song editor, when compiled for seq32 JACK support.

void set\_transpose (int transpose)

Sets the value of transposition for this window.

void transpose\_button\_callback (int transpose)

The button callback for transposition for this window.

## **Static Public Member Functions**

• static bool zoom\_check (int z)

Checks zoom values for the z/Z keystrokes used in perfroll and perftime.

# **Private Member Functions**

void set\_beats\_per\_bar (int bpm)

Sets the beats-per-measure text and value to the given value, and then calls set\_guides().

void set\_beat\_width (int bw)

Sets the BW (beat width, or the denominator in the time signature) text and values to the given value, and then calls set\_guides().

void set\_snap (int snap)

Sets the snap text and values to the given value, and then calls set\_guides().

void set\_guides ()

Sets the guides, which are the L and R user-interface elements.

• void grow ()

Increments the size of the perfroll and perftime objects.

void set\_looped ()

Set the looping in the perform object.

· void expand ()

Implement the expand action.

void collapse ()

Implement the collapse action.

• void copy ()

Implement the copy (actually, expand-and-copy) action.

• void undo ()

Implement the undo feature (Ctrl-Z).

• void redo ()

Implement the redo feature (Ctrl-R).

• void popup\_menu (Gtk::Menu \*menu)

Opens the given popup menu.

• void draw\_sequences ()

Forces a redraw of the sequences, though currently just the perfnames part of each sequence in the performance editor

· bool timeout ()

Handles a drawing timeout.

void set image (bool isrunning)

Changes the image used for the pause/play button.

void start\_playing ()

Implement the playing.

void pause\_playing ()

Pauses the playing of the song, leaving the progress bar where it stopped.

void stop\_playing ()

Stop the playing.

void toggle\_playing ()

Reverses the state of playback.

• void on\_realize ()

This callback function calls the base-class on\_realize() function, and then connects the perfedit::timeout() function to the Glib signal-timeout, with a redraw timeout of redraw period ms().

bool on\_key\_press\_event (GdkEventKey \*ev)

This function is the callback for a key-press event.

• bool on\_key\_release\_event (GdkEventKey \*ev)

This function is the callback for a key-release event.

bool on\_delete\_event (GdkEventAny \*)

All this callback function does is return false.

### **Private Attributes**

• perfedit \* m\_peer\_perfedit

The partner instance of perfedit.

• Gtk::Table \* m\_table

A whole horde of GUI elements.

• Gtk::Adjustment \* m vadjust

Vertical adjust for piano roll.

Gtk::Adjustment \* m\_hadjust

Horizontal adjust for piano roll.

• Gtk::VScrollbar \* m\_vscroll

Vertical scroll for piano roll.

• Gtk::HScrollbar \* m\_hscroll

Horizonatl scroll for piano roll.

• perfnames \* m\_perfnames

Pattern names in leftmost column.

13.49 seq64::perfedit Class Reference • perfroll \* m\_perfroll The piano roll in the song editor. • perftime \* m perftime The time/measures bar above roll. Gtk::Menu \* m\_menu\_snap The menu for grid-snap selection. • Gtk::Menu \* m\_menu\_xpose The menu for transpose selection. • Gtk::Button \* m button xpose Button to bring up transpose menu. • Gtk::Entry \* m entry xpose Text edit for the transpose value. Gtk::Image \* m\_image\_play The image for the play button. Gtk::Button \* m\_button\_snap Button to bring up the snap menu. • Gtk::Entry \* m\_entry\_snap Text edit for the grid-snap value. • Gtk::Button \* m\_button\_stop The Stop Play button object. • Gtk::Button \* m\_button\_play Implements the yellow two-bar pause button. • Gtk::ToggleButton \* m\_button\_loop Button for Left-to-Right looping. • Gtk::Button \* m\_button\_expand Button for Left/Right expansion. Gtk::Button \* m\_button\_collapse Button for Left/Right collapse. • Gtk::Button \* m\_button\_copy Expand and copy between L/R. • Gtk::Button \* m\_button\_grow Expand grid (bottom-right button). • Gtk::Button \* m\_button\_undo Button to undo previous action. • Gtk::Button \* m button redo Button to redo previous action. Gtk::ToggleButton \* m button jack Button to toggle JACK connection. Gtk::ToggleButton \* m\_button\_follow Button to toggle JACK following. Gtk::Button \* m button bpm Beats-per-measure menu button. • Gtk::Entry \* m\_entry\_bpm Text-edit for beats-per-measure. • Gtk::Button \* m button bw Beat-width menu button. • Gtk::Entry \* m\_entry\_bw

Text-edit for beat-width. Gtk::HBox \* m hbox Horizontal box (which?) in table. Gtk::HBox \* m hlbox

Horizontal box for buttons at top.

• Gtk::Tooltips \* m\_tooltips

Container for tool-tips.

• Gtk::Menu \* m\_menu\_bpm

Menus for time signature, beats per measure, beat width.

• Gtk::Menu \* m\_menu\_bw

Drop-down menu for beat-width.

• int m snap

Sets the horizontal grid snap-to in units of "pulses" or "ticks".

• int m\_bpm

The current "beats per measure" value.

• int m bw

The current "beat width" value.

• int m ppqn

The current "parts per quarter note" value.

bool m is running

Holds the current status of running, for use in display the play versus pause icon.

• int m standard bpm

The standard "beats per measure" of Sequencer64, which here matches the beats-per-measure displayed in the perfroll (piano roll).

### **Friends**

· void update perfedit sequences ()

This global function in the seq64 namespace calls perfedit :: draw sequences(), if the global perfedit objects exist.

# **Additional Inherited Members**

# 13.49.1 Detailed Description

It has a segroll and piano roll? No, it has a perform, a perfnames, a perfroll, and a perftime.

# 13.49.2 Constructor & Destructor Documentation

# 13.49.2.1 perfedit()

We've reordered the pointer members and put them in the initializer list to make the constructor a bit cleaner.

**Todo** Offload most of the work into an initialization function like options does.

р	Refers to the main performance object.
second_perfedit	If true, this object is the second perfedit object.
ppqn	The optionally-changed PPQN value to use for the performance editor.

### 13.49.2.2 ∼perfedit()

```
virtual seq64::perfedit::~perfedit ( ) [inline], [virtual]
```

We're going to have to run the application through valgrind to make sure that nothing is left behind.

### 13.49.3 Member Function Documentation

# 13.49.3.1 init\_before\_show()

```
void seq64::perfedit::init_before_show ( )
```

It does not seem to need to also forward to the perftime function of the same name.

#### 13.49.3.2 enqueue\_draw()

Note that we call the children's queue\_draw() functions, not enqueue\_draw(), otherwise we'll get stack overflow.

# **Parameters**

forward	If true (the default), pass the call to the peer. When passing this call to the peer, this parameter is set
	to false to prevent an infinite loop and the resultant stack overflow.

# 13.49.3.3 zoom\_check()

It has to range from greater than 1 (the highest zoom-in causes an unexplained drawing artifact at this time), and not greater than four times the c\_perf\_scale\_x value, at which point we have zoomed out so far that the measure numbers are almost completely obscured.

### **Parameters**

z The desired zoom value to validate.

### 13.49.3.4 enregister\_peer()

This function is meant to be called by mainwnd, which creates the perfedits and then makes sure they get along. Only the first call to this function will work; only one peer can be registered.

#### **Parameters**

peer The peer perfedit object to register, if not null.

### 13.49.3.5 set\_zoom()

#### **Parameters**

z The zoom value to be set. The child zoom functions called each check that this value is valid.

# 13.49.3.6 get\_toggle\_jack()

```
bool seq64::perfedit::get_toggle_jack ( )
```

### Returns

Returns the JACK button's get\_active() status.

# 13.49.3.7 toggle\_jack()

```
void seq64::perfedit::toggle_jack ( )
```

Note that this will trigger the button signal callback.

# 13.49.3.8 rewind()

The timeout is in milliseconds, and is currently hard-wired to 120.

Note the use of "&perf()" to get the address of the perform object.

#### **Parameters**

*press* | True if the operation is a key press, false if the operation is a key release.

### 13.49.3.9 fast\_forward()

#### **Parameters**

press | True if the operation is a key press, false if the operation is a key release.

# 13.49.3.10 set\_follow\_transport()

```
void seq64::perfedit::set_follow_transport ( )
```

Note that this will trigger the button signal callback.

# 13.49.3.11 toggle\_follow\_transport()

```
void seq64::perfedit::toggle_follow_transport ( )
```

Note that this will trigger the button signal callback.

# 13.49.3.12 set\_jack\_mode()

```
void seq64::perfedit::set_jack_mode ( )
```

To avoid a lot of pointer dereferencing, much of the code is offloaded to perform::set\_jack\_mode(), which now returns a boolean.

# 13.49.3.13 set\_transpose()

# **Parameters**

transpose

The amount to transpose the transposable sequences. We need to add validation at some point, if the widget does not enforce that.

# 13.49.3.14 transpose\_button\_callback()

# **Parameters**

# 13.49.3.15 set\_beats\_per\_bar()

The usage of is modified was faulty. Offloaded it to the perform object to make it more foolproof. See the perform ::modify() function.

#### **Parameters**

bpm

Provides the beats/measure or beats/bar value to be set. This value is basically the numerator of the time signature.

#### 13.49.3.16 set\_beat\_width()

The usage of is modified was faulty. Offloaded it to the perform object to make it more foolproof. See the perform  $\leftarrow$  ::modify() function.

#### **Parameters**

hw

Provides the beat width to be set. The beat width is basically the denominator of the time signature.

# 13.49.3.17 set\_snap()

# Parameters

snap

Provide the snap value to be set. This value is basically the numerator of the expression "1 / snap".

# 13.49.3.18 set\_guides()

```
void seq64::perfedit::set_guides ( ) [private]
```

See the set\_snap() function.

It's a little confusing; I assigned the label "m\_standard\_bpm" to the value 4 in "measure\_pulse =  $192 * 4 * m_bpm / m_bw$ ", but I am not sure I understand this equation... why the extra factor of 4? That 4 appears in "c\_ppqn \* 4" a lot in the original code.

# 13.49.3.19 grow()

```
void seq64::perfedit::grow ( ) [private]
```

Make sure that setting the modified flag makes sense for this operation. It doesn't seem to modify members.

```
13.49.3.20 set_looped()

void seq64::perfedit::set_looped ( ) [private]

13.49.3.21 expand()

void seq64::perfedit::expand ( ) [private]
```

This action opens up a space of events between the L and R (left and right) markers. This action is preceded by pushing an Undo operation in the perform object, moving its triggers, and telling the perfroll to redraw.

```
13.49.3.22 collapse()
void seq64::perfedit::collapse ( ) [private]
```

This action removes all events between the L and R (left and right) markers. This action is preceded by pushing an Undo operation in the perform object, not moving its triggers (they go away), and telling the perfroll to redraw.

```
13.49.3.23 copy()
void seq64::perfedit::copy ( ) [private]
```

This action opens up a space of events between the L and R (left and right) markers, and copies the information from the same amount of events that follow the R marker. This action is preceded by pushing an Undo operation in the perform object, copying its triggers, and telling the perfroll to redraw.

```
13.49.3.24 undo()
void seq64::perfedit::undo ( ) [private]
```

We pop an Undo trigger, and then ask the perfroll to queue up a (re)drawing action.

```
13.49.3.25 redo()
void seq64::perfedit::redo ( ) [private]
```

We pop an Redo trigger, and then ask the perfroll to queue up a (re)drawing action.

# 13.49.3.27 draw\_sequences()

```
void seq64::perfedit::draw_sequences ( ) [private]
```

This is meant to be called when the focus of an open segedit or eventedit window changes.

#### 13.49.3.28 timeout()

```
bool seq64::perfedit::timeout ( ) [private]
```

It redraws "dirty" sequences in the perfroll and the perfnames objects, and shows draw progress on the perfroll. It also changes the pause/play image if the status of running has changed. This function is called frequently and continuously. It will work for both perfedit windows, if both are up.

#### 13.49.3.29 set\_image()

#### **Parameters**

isrunnina

If true, the image should be the pause image. Otherwise, it should be the play image.

# 13.49.3.30 start\_playing()

```
void seq64::perfedit::start_playing ( ) [private]
```

JACK will be used if it is present and, in the application, enabled and working. Note the new flag to let perform know that it is a pause/play request from the perfedit window. In other words, a forced Song mode.

### 13.49.3.31 pause\_playing()

```
void seq64::perfedit::pause_playing ( ) [private]
```

Keeps the stop button enabled as a kind of rewind for ALSA. Stop in place!

# 13.49.3.32 stop\_playing()

```
void seq64::perfedit::stop_playing ( ) [private]
```

We need to make the progress line move back to the beginning right away here.

# 13.49.3.33 toggle\_playing()

```
void seq64::perfedit::toggle_playing ( ) [inline], [private]
```

Meant only to be called when the "Play" button is pressed. Currently, the GUI does not change. This function will ultimately act like a Pause/Play button, but currently the pause functionality on works (partially) for JACK transport. Currently not used.

By default, the space-bar starts the playing, and the Escape key stops the playing. The start/end key may be the same key (i.e. space-bar), allow toggling when the same key is mapped to both triggers. Note that we now pass false in the call to perform::playback\_key\_event(), if SEQ64\_PAUSE\_SUPPORT is compiled in. Song mode doesn't yield the pause effect we want.

#### **Parameters**

*ev* Provides the key event to implement.

#### 13.49.3.36 on\_key\_release\_event()

It is needed to turn off the fast-forward and rewind keys functionality when released.

# **Parameters**

*ev* Provides the key event to implement.

# 13.49.3.37 on\_delete\_event()

# 13.49.4 Friends And Related Function Documentation

### 13.49.4.1 update\_perfedit\_sequences

```
void update_perfedit_sequences ( ) [friend]
```

It is used by other objects (seqedit and eventedit) that can modify the currently-edited sequence shown in the perfedit (song window).

### 13.49.5 Field Documentation

# 13.49.5.1 m\_peer\_perfedit

```
perfedit* seq64::perfedit::m_peer_perfedit [private]

Gtk::Tooltips* seq64::perfedit::m_tooltips [private]
13.49.5.35 m_menu_bpm
Gtk::Menu* seq64::perfedit::m_menu_bpm [private]
Drop-down menu for beats/minute.
13.49.5.36 m_menu_bw
Gtk::Menu* seq64::perfedit::m_menu_bw [private]
13.49.5.37 m_snap
int seq64::perfedit::m_snap [private]
13.49.5.38 m_bpm
int seq64::perfedit::m_bpm [private]
Do not confuse it with BPM (beats per minute). The numerator of the time signature.
13.49.5.39 m_bw
int seq64::perfedit::m_bw [private]
The denominator of the time signature.
13.49.5.40 m_ppqn
int seq64::perfedit::m_ppqn [private]
```

This class implements the left-side keyboard in the patterns window.

Inheritance diagram for seq64::perfnames:

## **Public Member Functions**

- perfnames (perform &p, perfedit &parent, Gtk::Adjustment &vadjust)
  - Principal constructor for this user-interface object.
- virtual ∼perfnames ()
  - Let's provide a do-nothing virtual destructor.
- void redraw\_dirty\_sequences ()
  - Redraws sequences that have been modified.

#### **Private Member Functions**

void enqueue\_draw ()

Wraps queue\_draw() and forwards the call to the parent perfedit, so that it can forward it to any other perfedit that exists, and to the other sub-elements of the song editor.

int convert\_y (int y)

Converts a y-value into a sequence number and returns it.

• void draw\_sequences ()

New function to encapsulate forced redrawing of all sequence names in the current viewport.

void draw\_sequence (int sequence)

Draw the given sequence.

• void change\_vert ()

Change the vertial offset of a sequence/pattern.

· void redraw (int sequence)

Redraw the given sequence.

• void on\_realize ()

Handles the callback when the window is realized.

bool on\_expose\_event (GdkEventExpose \*ev)

Handles an on-expose event.

• bool on button press event (GdkEventButton \*ev)

Provides the callback for a button press, and it handles only a left mouse button [the right mouse button is handled in on\_button\_release\_event()].

bool on button release event (GdkEventButton \*ev)

Handles a button-release for the right button, bringing up a popup menu that is identical to the right-click popup menu for a slot in the patterns panel (mainwid), and context sensitive.

void on size allocate (Gtk::Allocation &)

Handles a size-allocation event.

bool on\_scroll\_event (GdkEventScroll \*ev)

Handle the vertical scrolling of the window.

#### **Private Attributes**

perfedit & m\_parent

Provides a link to the perfedit that created this object.

• int m names chars

Provides the number of the characters in the name box.

int m\_char\_w

Provides the "real" width of a character.

int m\_setbox\_w

Provides the width of the "set number" box.

• int m\_namebox\_w

Provides the width of the "name" box.

· int m\_names\_x

Provides the width of the names box, which is the width of a character for 24 characters.

· int m names y

Provides the height of the names box, which is hardwired to 24 pixels.

int m\_xy\_offset

Provides the horizontal and vertical offsets of the text relative to the names box.

· const int m seqs in set

The number of sequences in a set, currently still hardwired to 32.

const int m\_sequence\_max

The maximum number of sequences, current  $32 \times 32 = 1024$ .

• int m\_sequence\_offset

The offset from the 0th sequence, which is determined by the vertical view of the piano roll, controlled by the vertical scroll-bar.

• bool m\_sequence\_active [c\_max\_sequence]

Indicates if the given sequence is active or not.

#### **Friends**

· class perfedit

#### **Additional Inherited Members**

## 13.50.1 Detailed Description

It inherits from <a href="mailto:gui\_drawingarea\_gtk2">gui\_drawingarea\_gtk2</a> to support the font, color, and other GUI functionality, and from seqmenu to support the right-click Edit/New/Cut right-click menu.

*Obsolete* Note the usage of virtual base classes. Since these can add some extra overhead, we should determine if we can do without the virtuality (and indeed it doesn't seem to be needed).

## 13.50.2 Constructor & Destructor Documentation

## 13.50.2.1 perfnames()

Weird is that the window (x,y) are set to (c\_names\_x, 100), when c\_names\_y is 22 (now 24) in globals.h.

#### **Parameters**

р	Provides a reference to the main performance object of the application.
parent	Provides a reference to the object that contains this object, so that this object can tell the parent to queue up a drawing operation.
vadjust	Provides the vertical scrollbar object needed so that perfnames can respond to scrollbar cursor/thumb movement.

## 13.50.2.2 $\sim$ perfnames()

```
virtual seq64::perfnames::~perfnames ( ) [inline], [virtual]
```

#### 13.50.3 Member Function Documentation

#### 13.50.3.1 redraw\_dirty\_sequences()

```
13.50.3.2 enqueue_draw()
```

void seq64::perfnames::redraw\_dirty\_sequences ( )

```
void seq64::perfnames::enqueue_draw ( ) [private]
```

The parent perfedit will call perfnames::queue\_draw() on behalf of this object, and it will pass a perfnames...enqueue draw() to the peer perfedit's perfnames, if the peer exists.

#### 13.50.3.3 convert\_y()

Used in figuring out which sequence to mute/unmute in the performance editor.

#### **Parameters**

y The y value (within the vertical limits of the perfnames column to the left of the performance editor's piano roll.

#### Returns

Returns the sequence number corresponding to the y value.

## 13.50.3.4 draw\_sequences()

```
void seq64::perfnames::draw_sequences ( ) [private]

13.50.3.5 draw sequence()
```

This function has to be prepared to handle an almost endless list of sequences, including unused ones, to draw them all with compatible styles. The sequences are grouped by set-number. The set-number occurs every 32 sequences in the leftmost column of the window.

- 1. Render the set number, or a blank box, in leftmost column. If the y height of the first draw\_rectangle is m\_names\_y + 1, then we get a black line for the blank tracks, looks ugly.
- 2. Make sure that the rectangle drawn with the proper background colors for various combinations of muting and highlighting, otherwise just the name is properly colored.
- 3. Render the column with the name of the sequence. The channel number ranges from 1 to 16, but SMF 0 is indicated on-screen by a channel number of 0. We get the label format from the perform object, for consistency across windows.

seqnum Index to the sequence information to be drawn.

## 13.50.3.6 change\_vert()

```
void seq64::perfnames::change_vert ( ) [private]

13.50.3.7 redraw()

void seq64::perfnames::redraw (
```

This function is a virtual function of seqmenu that must be overridden in this class.

int sequence ) [inline], [private], [virtual]

#### **Parameters**

sequence Provides the number of the sequence to be redrawn.

Implements seq64::seqmenu.

## 13.50.3.8 on\_realize()

```
void seq64::perfnames::on_realize ( ) [private]
```

It first calls the base-class version of on\_realize(). Then it allocates any additional resources needed.

## 13.50.3.9 on\_expose\_event()

It draws all of the sequences that will be visible.

We could actually optimize this a tiny bit, to save some additions in the for loop.

## **Parameters**

ev The expose event, not used.

#### Returns

Always returns true.

#### 13.50.3.10 on\_button\_press\_event()

```
bool seq64::perfnames::on_button_press_event (
              {\tt GdkEventButton * ev ) \quad [private]}
```

Two operations are supported by left-clicking on the sequence/track name:

- Normal. Toggles the mute status of the sequence that is clicked. Shift. Toggles the mutes status of all other sequences, making  ${\sf S}$ this operation an easy way to preview a single sequence in the performance editor, then bring back the rest of the tracks.

#### **Parameters**

The mouse button event.

#### Returns

Always returns true.

#### 13.50.3.11 on\_button\_release\_event()

```
bool seq64::perfnames::on_button_release_event (
            GdkEventButton * p0 ) [private]
```

#### **Parameters**

The button event.

#### Returns

Always returns false.

## 13.50.3.12 on\_size\_allocate()

```
void seq64::perfnames::on_size_allocate (
            Gtk::Allocation & a ) [private]
```

It first calls the base-class version of this function.

## **Parameters**

The allocation event. It is passed to the base-class on size allocate() function, and then m window x and m\_window\_y are set to the width and height, respectively, of the allocation.

```
13.50.3.13 on_scroll_event()
```

The vertical value is incremented or decremented by the amount of the step increment, and the page is clamped to the new value.

#### **Parameters**

```
ev The scrolling event.
```

#### Returns

Always returns true.

#### 13.50.4 Friends And Related Function Documentation

```
13.50.4.1 perfedit
```

```
friend class perfedit [friend]
```

#### 13.50.5 Field Documentation

## 13.50.5.1 m\_parent

```
perfedit& seq64::perfnames::m_parent [private]
```

We want to support two perfedit windows, but the children of perfedit will have to communicate changes requiring a redraw through the parent.

```
13.50.5.2 m_names_chars
```

```
int seq64::perfnames::m_names_chars [private]
```

Pretty much hardwired to 24 at present.

```
13.50.5.3 m_char_w
```

```
int seq64::perfnames::m_char_w [private]
```

This value is obtained from a font-renderer accessor function.

```
13.50.5.4 m_setbox_w
```

```
int seq64::perfnames::m_setbox_w [private]
```

This used to be hardwired to 6 \* 2 (character-width times two).

```
13.50.5.5 m_namebox_w
int seq64::perfnames::m_namebox_w [private]
This used to be a weird calculation based on character width.
13.50.5.6 m_names_x
int seq64::perfnames::m_names_x [private]
13.50.5.7 m_names_y
int seq64::perfnames::m_names_y [private]
This value was once 22 pixels, but we need a little extra room for our new font. This extra room is compatible enough
with the old font, as well.
13.50.5.8 m_xy_offset
int seq64::perfnames::m_xy_offset [private]
Currently hardwired.
13.50.5.9 m_seqs_in_set
const int seq64::perfnames::m_seqs_in_set [private]
13.50.5.10 m_sequence_max
const int seq64::perfnames::m_sequence_max [private]
13.50.5.11 m_sequence_offset
int seq64::perfnames::m_sequence_offset [private]
13.50.5.12 m_sequence_active
```

If this really is the true meaning of this value, we ought to get it directly from the sequence if we can.

bool seq64::perfnames::m\_sequence\_active[c\_max\_sequence] [private]

## 13.51 seq64::perform Class Reference

This class supports the performance mode.

## **Public Types**

```
    enum mute_op_t {
        MUTE_TOGGLE,
        MUTE_OFF,
        MUTE_ON }
        Provides settings for muting.
    enum ff_rw_button_t {
        FF_RW_REWIND,
        FF_RW_NONE,
        FF_RW_FORWARD }
```

Provides setting for the fast-forward and rewind functionality.

#### **Public Member Functions**

perform (gui assistant &mygui, int ppqn=SEQ64 USE DEFAULT PPQN)

This construction initializes a vast number of member variables, some of them public (but we're working on that)!

∼perform ()

The destructor sets some running flags to false, signals this condition, then joins the input and output threads if the were launched.

· bool is modified () const

'Getter' function for member m is modfied

· void modify ()

'Setter' function for member m\_is\_modified This setter only sets the modified-flag to true.

• int ppqn () const

'Getter' function for member m\_ppqn

int sequence\_count () const

'Getter' function for member m\_sequence\_count It is better to call this getter before bothering to even try to use a sequence.

int sequence\_max () const

'Getter' function for member m\_sequence\_max

• bool is\_control\_status () const

'Getter' function for member m\_control\_status

void set\_edit\_sequence (int seqnum)

 ${\it 'Setter' function for member m\_edit\_sequence}$ 

void unset\_edit\_sequence (int seqnum)

'Setter' function for member m\_edit\_sequence

• bool is\_edit\_sequence (int seqnum) const

'Getter' function for member m\_edit\_sequence

• int get\_beats\_per\_bar () const

'Getter' function for member m\_beats\_per\_bar

void set\_beats\_per\_bar (int bpm)

'Setter' function for member m\_beats\_per\_bar

• int get\_beat\_width () const

'Getter' function for member m\_beat\_width

· void set beat width (int bw)

'Setter' function for member m\_beat\_width

void clocks\_per\_metronome (int cpm)

'Setter' function for member m\_clocks\_per\_metronome

• int clocks\_per\_metronome () const

'Getter' function for member m\_clocks\_per\_metronome

void set\_32nds\_per\_quarter (int tpq)

'Setter' function for member m\_32nds\_per\_quarter

• int get\_32nds\_per\_quarter () const

'Getter' function for member m\_32nds\_per\_quarter

void us\_per\_quarter\_note (long upqn)

'Setter' function for member m\_us\_per\_quarter\_note

• long us\_per\_quarter\_note () const

'Getter' function for member m\_us\_per\_quarter\_note

• const gui\_assistant & gui () const

'Getter' function for member m\_gui\_support The const getter.

• gui\_assistant & gui ()

'Getter' function for member m\_gui\_support The un-const getter.

• const keys\_perform & keys () const

'Getter' function for member m\_gui\_support.keys() The const getter.

keys\_perform & keys ()

'Getter' function for member m\_gui\_support.keys() The un-const getter.

mastermidibus & master\_bus ()

'Getter' function for member m\_master\_bus

void filter\_by\_channel (bool flag)

'Setter' function for member m\_master\_bus.filter\_by\_channel()

bool is\_running () const

'Getter' function for member m\_running Could also be called "is\_playing()".

bool is\_pattern\_playing () const

'Setter' function for member m\_is\_pattern\_playing

bool toggle\_song\_start\_mode ()

'Setter' function for member m\_song\_start\_mode

void song\_start\_mode (bool flag)

'Setter' function for member m\_song\_start\_mode

· bool song\_start\_mode () const

'Getter' function for member m\_song\_start\_mode

bool is\_jack\_running () const

'Getter' function for member m\_jack\_asst.is\_running() This function is useful for announcing the status of JACK in user-interface items that only have access to the perform object.

· bool is jack master () const

'Getter' function for member m\_jack\_asst.is\_master() Also now includes is\_jack\_running(), since one cannot be JACK Master if JACK is not running.

void enregister (performcallback \*pfcb)

Adds a pointer to an object to be notified by this perform object.

- void toggle\_jack\_mode ()
- bool set\_jack\_mode (bool mode)

Encapsulates behavior needed by perfedit.

• bool get\_toggle\_jack () const

'Getter' function for member m\_jack\_asst.get\_jack\_mode()

void set\_jack\_stop\_tick (midipulse tick)

'Setter' function for member m jack asst.set jack stop tick()

unsigned short combine\_bytes (midibyte b0, midibyte b1)

Combines bytes into an unsigned-short value.

• void FF\_rewind ()

Implements the fast-forward or rewind functionality imported from seq32.

bool FF\_RW\_timeout ()

Convenience function.

void start\_from\_perfedit (bool flag)

'Setter' function for member m\_start\_from\_perfedit

· bool start from perfedit () const

'Getter' function for member m\_start\_from\_perfedit

void set\_follow\_transport (bool flag)

'Getter' function for member m\_jack\_asst.set\_follow\_transport()

bool get\_follow\_transport () const

'Getter' function for member m\_jack\_asst.get\_follow\_transport()

void toggle\_follow\_transport ()

'Setter' function for member m\_jack\_asst.toggle\_follow\_transport()

void set\_reposition (bool postype=true)

'Getter' function for member m\_reposition

ff\_rw\_button\_t ff\_rw\_type ()

'Getter' function for member m\_FF\_RW\_button\_type

void ff\_rw\_type (ff\_rw\_button\_t button\_type)

'Getter' function for member m\_FF\_RW\_button\_type

void rewind (bool press)

Sets the rewind status.

void fast\_forward (bool press)

Sets the fast-forward status.

· void reposition (midipulse tick)

Encapsulates some repositioning code needed to move the position to the mouse pointer location in perfroll.

• bool clear all ()

Clears all of the patterns/sequences.

void launch (int ppqn)

Calls the MIDI buss and JACK initialization functions and the input/output thread-launching functions.

void new\_sequence (int seq)

Creates a new pattern/sequence for the given slot, and sets the new pattern's master MIDI bus address.

void add\_sequence (sequence \*seq, int perf)

Adds a pattern/sequence pointer to the list of patterns.

void delete\_sequence (int seq)

Deletes a pattern/sequence by number.

bool is\_sequence\_in\_edit (int seq)

Check if the pattern/sequence, given by number, has an edit in progress.

void clear\_sequence\_triggers (int seq)

Clears the patterns/sequence for the given sequence, if it is active.

void print\_triggers () const

Shows all the triggers of all the sequences.

· void finish ()

The rough opposite of launch(); it doesn't stop the threads.

• midipulse get\_tick () const

'Getter' function for member m\_tick

midipulse get\_jack\_tick () const

'Getter' function for member m\_jack\_tick

void set\_jack\_tick (midipulse tick)

'Setter' function for member m\_jack\_tick

void set\_left\_tick (midipulse tick, bool setstart=true)

Set the left marker at the given tick.

· midipulse get left tick () const

'Getter' function for member m\_left\_tick

void set\_start\_tick (midipulse tick)

'Setter' function for member m\_starting\_tick

• midipulse get\_start\_tick () const

'Setter' function for member m\_starting\_tick

void set right tick (midipulse tick, bool setstart=true)

Set the right marker at the given tick.

· midipulse get\_right\_tick () const

'Getter' function for member m\_right\_tick

· double left\_right\_size () const

Convenience function for JACK support when loop in song mode.

· bool is\_active (int seq) const

Checks the pattern/sequence for activity.

• void apply\_song\_transpose ()

Calls the apply\_song\_transpose() function for all active sequences.

void set\_transpose (int t)

'Setter' function for member m\_transpose For sanity's sake, the values are restricted to +-64.

int get\_transpose () const

'Getter' function for member m\_transpose

int get\_beats\_per\_minute ()

'Getter' function for member m\_master\_bus.get\_beats\_per\_minute Retrieves the BPM setting of the master MIDI buss.

void set\_sequence\_control\_status (int status)

If the given status is present in the c\_status\_snapshot, the playing state is saved.

void unset\_sequence\_control\_status (int status)

If the given status is present in the c\_status\_snapshot, the playing state is restored.

void sequence\_playing\_toggle (int seq)

If the given sequence is active, then it is toggled.

void sequence playing change (int seg, bool on)

Turn the playing of a sequence on or off, if it is active.

void sequence\_playing\_on (int seq)

Calls sequence playing change() with a value of true.

void sequence\_playing\_off (int seq)

Calls sequence\_playing\_change() with a value of false.

void mute\_all\_tracks (bool flag=true)

Mutes/unmutes all tracks in the current set of active patterns/sequences.

void toggle\_all\_tracks ()

Toggles the mutes status of all tracks in the current set of active patterns/sequences.

• bool armed\_saved () const

'Getter' function for member m\_armed\_saved

- void toggle\_playing\_tracks ()
- void mute\_screenset (int ss, bool flag=true)

Mutes/unmutes all tracks in the desired screen-set.

• void output func ()

Performance output function.

void input\_func ()

This function is called by input thread func().

void set\_group\_mute\_state (int gtrack, bool muted)

This function sets the mute state of an element in the m\_mute\_group array.

bool get\_group\_mute\_state (int gtrack)

The opposite of set\_group\_mute\_state(), it gets the value of the desired track.

void set\_offset (int offset)

Calculates the offset into the screen sets.

int get\_offset () const

'Getter' function for member m\_offset

void save\_playing\_state ()

For all active patterns/sequences, this function gets the playing status and saves it in m\_sequence\_state[i].

void restore\_playing\_state ()

For all active patterns/sequences, this function gets the playing status from m\_sequence\_state[i] and sets it for the sequence.

• std::string key\_name (unsigned int k) const

Here follows a few forwarding functions for the keys\_perform-derived classes.

keys\_perform::SlotMap & get\_key\_events ()

Forwarding function for key events.

keys\_perform::SlotMap & get\_key\_groups ()

Forwarding function for key groups.

keys\_perform::RevSlotMap & get\_key\_events\_rev ()

Forwarding function for reverse key events.

keys\_perform::RevSlotMap & get\_key\_groups\_rev ()

Forwarding function for reverse key groups.

bool show\_ui\_sequence\_key () const

'Getter' function for member m\_show\_ui\_sequency\_key Provides access to keys().show\_ui\_sequence\_key().

void show ui sequence key (bool flag)

'Setter' function for member m\_show\_ui\_sequency\_key

· bool show ui sequence number () const

'Getter' function for member m\_show\_ui\_sequency\_number Provides access to keys().show\_ui\_sequence\_number().

void show\_ui\_sequence\_number (bool flag)

'Getter' function for member m\_show\_ui\_sequency\_number

unsigned int lookup\_keyevent\_key (int seqnum)

Gets the event key for the given sequence.

long lookup\_keyevent\_seq (unsigned int keycode)

Gets the sequence number for the given event key.

• unsigned int lookup\_keygroup\_key (long groupnum)

Gets the group key for the given sequence.

long lookup\_keygroup\_group (unsigned int keycode)

Gets the group number for the given group key.

void start\_playing (bool songmode=false)

Encapsulates a series of calls used in mainwnd.

• void pause\_playing (bool songmode=false)

Pause playback, so that progress bars stay where they are, and playback always resumes where it left off, even in ALSA mode.

void stop\_playing ()

Encapsulates a series of calls used in mainwnd.

void start\_key (bool songmode=false)

Invoke the start key functionality.

void pause\_key (bool songmode=false)

Invoke the pause key functionality.

void stop key ()

Invoke the stop key functionality.

void learn\_toggle ()

Encapsulates some calls used in mainwnd.

• int decrement beats per minute ()

Encapsulates some calls used in mainwnd.

int increment\_beats\_per\_minute ()

Encapsulates some calls used in mainwnd.

int decrement screenset ()

Encapsulates some calls used in mainwnd.

• int increment screenset ()

Encapsulates some calls used in mainwnd.

bool highlight (const sequence &seq) const

True if a sequence is empty and should be highlighted.

• bool is\_smf\_0 (const sequence &seq) const

True if the sequence is an SMF 0 sequence.

const sequence \* get\_sequence (int seq) const

Retrieves the actual sequence, based on the pattern/sequence number.

sequence \* get sequence (int seq)

Retrieves the actual sequence, based on the pattern/sequence number.

void sequence\_key (int seq)

Handle a sequence key to toggle the playing of an active pattern in the selected screen-set.

std::string sequence label (const sequence &seq)

Provides a way to format the sequence parameters string for display in the mainwid or perfnames modules.

void set\_input\_bus (int bus, bool input\_active)

Sets the input bus, and handles the special "key labels on sequence" and "sequence numbers on sequence" functionality.

bool mainwnd\_key\_event (const keystroke &k)

Provided for mainwnd :: on\_key\_press\_event() and mainwnd :: on\_key\_release\_event() to call.

bool perfroll\_key\_event (const keystroke &k, int drop\_sequence)

Provided for perfroll :: on key press event() and perfroll :: on key release event() to call.

bool playback key event (const keystroke &k, bool songmode=false)

New function provided to unify the stop/start (space/escape) behavior of the various windows where playback can be started, paused, or stopped.

void move\_triggers (bool direction)

If the left tick is less than the right tick, then, for each sequence that is active, its triggers are moved by the difference between the right and left in the specified direction.

· void copy\_triggers ()

If the left tick is less than the right tick, then, for each sequence that is active, its triggers are copied, offset by the difference between the right and left.

void push\_trigger\_undo (int track=SEQ64\_ALL\_TRACKS)

For every active sequence, call that sequence's push\_trigger\_undo() function.

• void pop trigger undo ()

For every active sequence, call that sequence's pop\_trigger\_undo() function.

- void pop trigger redo ()
- bool is\_dirty\_main (int seq)

Checks the pattern/sequence for main-dirtiness.

bool is\_dirty\_edit (int seq)

Checks the pattern/sequence for edit-dirtiness.

bool is\_dirty\_perf (int seq)

Checks the pattern/sequence for perf-dirtiness.

bool is\_dirty\_names (int seq)

Checks the pattern/sequence for names-dirtiness.

• bool is\_exportable (int seq) const

Indicates that the desired sequence is active, unmuted, and has a non-zero trigger count.

void set\_screenset (int ss)

Sets the  $m\_screenset$  value (the index or ID of the current screen set).

• int get\_screenset () const

'Getter' function for member m screenset

• int get\_playing\_screenset () const

'Getter' function for member m\_playing\_screen

#### **Private Member Functions**

· bool have\_undo () const

'Getter' function for member m have undo

void set\_have\_undo (bool undo)

'Setter' function for member m\_have\_undo Note that, if the undo parameter is true, then we mark the performance as modified.

• bool have\_redo () const

'Getter' function for member m\_have\_redo

• void set\_have\_redo (bool redo)

'Setter' function for member m\_have\_redo

void split\_trigger (int seqnum, midipulse tick)

Convenience function for perfroll's split-trigger functionality.

midipulse get\_max\_trigger ()

Locates the largest trigger value among the active sequences.

· void collapse ()

Convenience function for perfedit's collapse functionality.

void copy ()

Convenience function for perfedit's copy functionality.

void expand ()

Convenience function for perfedit's expand functionality.

midi\_control & midi\_control\_toggle (int seq)

Retrieves a reference to a value from m\_midi\_cc\_toggle[].

midi control & midi control on (int seg)

Retrieves a reference to a value from m\_midi\_cc\_on[].

midi\_control & midi\_control\_off (int seq)

Retrieves a reference to a value from m\_midi\_cc\_off[].

void handle\_midi\_control (int control, bool state)

Handle the MIDI Control values that provide some automation for the application.

const std::string & get\_screen\_set\_notepad (int screen\_set) const

Retrieves the given string from m\_screen\_set\_notepad[].

const std::string & current\_screen\_set\_notepad () const

Returns the notepad text for the current screen-set.

• void set\_screen\_set\_notepad (int screenset, const std::string &note)

Copies the given string into m\_screen\_set\_notepad[].

void set\_screen\_set\_notepad (const std::string &note)

Sets the notepad text for the current screen-set.

void set\_playing\_screenset ()

Sets the screen set that is active, based on the value of m\_screenset.

• bool any\_group\_unmutes () const

'Getter' function for member m\_mute\_group[]

• void mute\_group\_tracks ()

If m\_mode\_group is true, then this function operates.

void select\_and\_mute\_group (int g\_group)

Select a mute group and then mutes the track in the group.

void set\_song\_mute (mute\_op\_t op)

Provides for various settings of the song-mute status of all sequences in the song.

void set\_mode\_group\_mute ()

'Setter' function for member m\_mode\_group

• void unset\_mode\_group\_mute ()

'Setter' function for member m\_mode\_group Unsets this member.

void select\_group\_mute (int g\_mute)

If we're in group-learn mode, then this function gets the playing statuses of all of the sequences in the current playscreen, and copies them into the desired mute-group.

· void set mode group learn ()

Sets the group-mute mode, then the group-learn mode, then notifies all of the notification subscribers.

void unset\_mode\_group\_learn ()

Notifies all of the notification subscribers that group-learn is being turned off.

bool is\_group\_learning ()

'Getter' function for member m\_mode\_group\_learn

void set\_and\_copy\_mute\_group (int group)

When in group-learn mode, for active sequences, the mute-group settings are set based on the playing status of each sequence.

void start (bool state)

If JACK is not running, call inner\_start() with the given state.

· void stop ()

If JACK is not running, call inner stop().

· void start jack ()

If JACK is supported, starts the JACK transport.

void stop\_jack ()

If JACK is supported, stops the JACK transport.

void position\_jack (bool state, midipulse tick=0)

If JACK is supported and running, sets the position of the transport.

void off\_sequences ()

For all active patterns/sequences, set the playing state to false.

void all\_notes\_off ()

For all active patterns/sequences, turn off its playing notes.

void set\_active (int seq, bool active)

Sets or unsets the active state of the given pattern/sequence number.

void set\_was\_active (int seq)

Sets was-active flags: main, edit, perf, and names.

void reset\_sequences (bool pause=false)

For all active patterns/sequences, get its playing state, turn off the playing notes, set playing to false, zero the markers, and, if not in playback mode, restore the playing state.

• void play (midipulse tick)

Plays all notes to the current tick.

• void set\_orig\_ticks (midipulse tick)

For every pattern/sequence that is active, sets the "original tick" value for the pattern.

void set\_beats\_per\_minute (int bpm)

Sets the value of the BPM into the master MIDI buss, after making sure it is squelched to be between 20 and 500.

void set\_looping (bool looping)

'Setter' function for member m\_looping

int max\_active\_set () const

Checks the whole universe of sequences to determine the current last-active set, that is, the highest set that has any active sequences in it.

void launch\_input\_thread ()

Creates the input thread using input thread func().

• void launch\_output\_thread ()

Creates the output thread using output\_thread\_func().

bool init\_jack ()

Initializes JACK support, if SEQ64 JACK SUPPORT is defined.

bool deinit\_jack ()

Tears down the JACK infrastructure.

bool seq\_in\_playing\_screen (int seq)

A helper function for determining if the mode group is in force, the playing screenset is the same as the current screenset, and the sequence is in the range of the playing screenset.

· void is\_modified (bool flag)

'Setter' function for member m\_is\_modified

· bool valid\_midi\_control\_seq (int seq) const

Checks the parameter against c\_midi\_controls.

· bool is screenset valid (int screenset) const

Checks the screenset against m\_max\_sets.

void set running (bool running)

'Setter' function for member m running

void is\_pattern\_playing (bool flag)

'Setter' function for member m\_is\_pattern\_playing

void set\_playback\_mode (bool playbackmode)

'Setter' function for member m\_playback\_mode

int mute\_group\_offset (int track)

A helper function to calculate the index into the mute-group array, based on the desired track.

bool is\_seq\_valid (int seq) const

Provides common code to check for the bounds of a sequence number.

bool is\_mseq\_valid (int seq) const

Validates the sequence number, which is important since they're currently used as array indices.

bool install\_sequence (sequence \*seq, int seqnum)

A private helper function for add\_sequence() and new\_sequence().

void inner\_start (bool state)

Locks on m\_condition\_var.

void inner\_stop (bool midiclock=false)

Unconditionally, and without locking, clears the running status, resets the sequences, and sets m\_usemidiclock false.

• int clamp\_track (int track) const

Provides common code to keep the track value valid.

void set\_all\_key\_events ()

Pass-along function for keys().set\_all\_key\_events.

void set\_all\_key\_groups ()

Pass-along function for keys().set\_all\_key\_events.

• void set\_key\_event (unsigned int keycode, long sequence\_slot)

At construction time, this function sets up one keycode and one event slot.

void set\_key\_group (unsigned int keycode, long group\_slot)

At construction time, this function sets up one keycode and one group slot.

## **Private Attributes**

· bool m song start mode

If true, playback is done in Song mode, not Live mode.

· bool m start from perfedit

Indicates that, no matter what the current Song/Live setting, the playback was started from the perfedit window.

bool m\_reposition

It seems that this member, if true, forces a repositioning to the left (L) tick marker.

· float m excell FF RW

Provides an "acceleration" factor for the fast-forward and rewind functionality.

• ff\_rw\_button\_t m\_FF\_RW\_button\_type

Indicates whether the fast-forward or rewind key is in effect in the perfedit window.

· gui\_assistant & m\_gui\_support

Support for a wide range of GUI-related operations.

• bool m\_mute\_group [c\_max\_sequence]

Mute group support.

· bool m armed saved

Indicates if the m\_saved\_armed\_statuses[] values are the saved state of the sequences, and can be restored.

bool m armed statuses [c max sequence]

Holds the "global" saved status of the playing tracks, for restoration after saving.

bool m\_tracks\_mute\_state [c\_seqs\_in\_set]

Holds the current mute states of each track.

bool m\_mode\_group

If true, indicates that a mode group is selected, and playing statuses will be "memorized".

bool m\_mode\_group\_learn

If true, indicates that a group learn is selected, which also "memorizes" a mode group, and notifies subscribers of a group-learn change.

int m\_mute\_group\_selected

Selects a group to mute.

· int m playing screen

Playing screen support.

· int m\_playscreen\_offset

Playing screen sequence number offset.

• sequence \* m\_seqs [c\_max\_sequence]

Provides a "vector" of patterns/sequences.

• bool m\_seqs\_active [c\_max\_sequence]

Each boolean value in this array is set to true if a sequence is active, meaning that it will be used to hold some kind of MIDI data, even if only Meta events.

bool m\_was\_active\_main [c\_max\_sequence]

Each boolean value in this array is set to true if a sequence was active, meaning that it was found to be active at the time we were setting it to inactive.

• bool m\_was\_active\_edit [c\_max\_sequence]

Each boolean value in this array is set to true if a sequence was active, meaning that it was found to be active at the time we were setting it to inactive.

• bool m was active perf [c max sequence]

Each boolean value in this array is set to true if a sequence was active, meaning that it was found to be active at the time we were setting it to inactive.

bool m\_was\_active\_names [c\_max\_sequence]

Each boolean value in this array is set to true if a sequence was active, meaning that it was found to be active at the time we were setting it to inactive.

• bool m\_sequence\_state [c\_max\_sequence]

Saves the current playing state of each pattern.

• mastermidibus m\_master\_bus

Provides our MIDI buss.

int m\_transpose

Holds the global MIDI transposition value.

pthread t m out thread

Provides information for managing pthreads.

pthread\_t m\_in\_thread

Provides a "handle" to the input thread.

· bool m out thread launched

Indicates that the output thread has been started.

bool m\_in\_thread\_launched

Indicates that the input thread has been started.

bool m\_running

Indicates that playback is running.

· bool m is pattern playing

Indicates that a pattern is playing.

bool m\_inputing

Indicates that events are being written to the MIDI input busses in the input thread.

· bool m outputing

Indicates that events are being written to the MIDI output busses in the output thread.

bool m\_looping

Indicates that status of the "loop" button in the performance editor.

bool m\_playback\_mode

Specifies the playback mode.

• int m\_ppqn

Holds the current PPQN for usage in various actions.

· int m beats per bar

Holds the beats/bar value as obtained from the MIDI file.

int m\_beat\_width

Holds the beat width value as obtained from the MIDI file.

· int m clocks per metronome

Augments the beats/bar and beat-width with the additional values included in a Time Signature meta event.

int m\_32nds\_per\_quarter

Augments the beats/bar and beat-width with the additional values included in a Time Signature meta event.

long m\_us\_per\_quarter\_note

Augments the beats/bar and beat-width with the additional values included in a Tempo meta event.

midipulse m\_one\_measure

Holds the "one measure's worth" of pulses (ticks), which is normally m\_ppqn \* 4.

midipulse m\_left\_tick

Holds the position of the left (L) marker, and it is first defined as 0.

· midipulse m right tick

Holds the position of the right (R) marker, and it is first defined as the end of the fourth measure.

· midipulse m starting tick

Holds the starting tick for playing.

• midipulse m\_tick

MIDI Clock support.

• midipulse m\_jack\_tick

Let's try to save the last JACK pad structure tick for re-use with resume after pausing.

bool m\_usemidiclock

More MIDI clock support.

bool m\_midiclockrunning

More MIDI clock support.

· int m midiclocktick

More MIDI clock support.

int m\_midiclockpos

More MIDI clock support.

• bool m\_dont\_reset\_ticks

Support for pause, which does not reset the "last tick" when playback stops/starts.

std::string m\_screen\_set\_notepad [c\_max\_sets]

Used in the mainwnd class to set the notepad text for the given set.

midi\_control m\_midi\_cc\_toggle [c\_midi\_controls]

Provides the settings of MIDI Toggle, as read from the "rc" file.

• midi\_control m\_midi\_cc\_on [c\_midi\_controls]

Provides the settings of MIDI On, as read from the "rc" file.

midi\_control m\_midi\_cc\_off [c\_midi\_controls]

Provides the settings of MIDI Off, as read from the "rc" file.

· int m\_offset

Holds the current offset into the screen-sets.

• int m\_control\_status

Holds the OR'ed control status values.

· int m\_screenset

Indicates the number of the currently-selected screen-set.

· int m\_seqs\_in\_set

We will eventually replace c\_seqs\_in\_set with this member, which defaults to the value of c\_seqs\_in\_set.

· int m max sets

A replacement for the c\_max\_sets constant.

• int m sequence count

Keeps track of created sequences, whether or not they are active.

• int m\_sequence\_max

A replacement for the c\_max\_sequence constant.

int m\_edit\_sequence

Hold the number of the currently-in-edit sequence.

bool m\_is\_modified

It may be a good idea to eventually centralize all of the dirtiness of a performance here.

• condition\_var m\_condition\_var

A condition variable to protect playback.

· jack\_assistant m\_jack\_asst

A wrapper object for the JACK support of this application.

- · bool m have undo
- std::vector< int > m\_undo\_vect

Holds ??? for undo operations.

- bool m have redo
- std::vector< int > m\_redo\_vect

Holds ??? for undo operations.

std::vector< performcallback \* > m\_notify

#### **Static Private Attributes**

• static midi\_control sm\_mc\_dummy

Provides a dummy, inactive midi\_control object to handle out-of-range midi\_control indicies.

## **Friends**

- · class jack assistant
- · class keybindentry
- · class mainwnd
- · class midifile
- · class optionsfile
- class options
- · class perfedit
- class perfroll
- void \* input\_thread\_func (void \*myperf)

Set up the performance, and set the process to realtime privileges.

void \* output\_thread\_func (void \*myperf)

Global functions defined in perform.cpp.

- int jack\_sync\_callback (jack\_transport\_state\_t state, jack\_position\_t \*pos, void \*arg)
   Global functions for JACK support and JACK sessions.
- int jack\_process\_callback (jack\_nframes\_t nframes, void \*arg)
- void jack shutdown (void \*arg)
- void jack\_timebase\_callback (jack\_transport\_state\_t state, jack\_nframes\_t nframes, jack\_position\_t \*pos, int new\_pos, void \*arg)

The JACK timebase function defined here sets the JACK position structure.

• long get\_current\_jack\_position (void \*arg)

## 13.51.1 Detailed Description

It has way too many data members, one of them public. Might be ripe for refactoring. That has its own dangers, of course.

#### 13.51.2 Member Enumeration Documentation

```
13.51.2.1 mute_op_t
enum seq64::perform::mute_op_t
```

#### Enumerator

MUTE_TOGGLE	
MUTE_OFF	
MUTE_ON	

```
13.51.2.2 ff_rw_button_t
```

```
enum seq64::perform::ff_rw_button_t
```

## Enumerator

FF_RW_REWIND	
FF_RW_NONE	
FF_RW_FORWARD	

## 13.51.3 Constructor & Destructor Documentation

#### 13.51.3.1 perform()

Also note that we have a little issue with the fact that various sequences (patterns) can potentially have different beats/measure and beat-width values.

Currently, when reading the MIDI file, the beats/minute value is obtained from the MIDI file, if present, and this value is passed to <a href="mailto:perform::set\_beats\_per\_minute">perform::set\_beats\_per\_minute</a>(), which forwards it to the master MIDI buss and JACK assistant objects. This Tempo setting comes from both the Tempo meta event in track 0, and from the Seq24's c\_bpm SeqSpec section! This setting is now also made for the two Time Signature values.

#### **Parameters**

mygui	Provides access to the GUI assistant that holds many things, including the containers of keys and the "events" they provide. This is a base-class reference; for a real class, see the <a href="gui_assistant_gtk2">gui_assistant_gtk2</a> class in the <a href="gui_support">seq_gtkmm2</a> GUI-specific library. Note that we access the <a href="mgui_support">mgui_support</a> member using the
	gui() accessor function.
ppqn	The default, choosable, or actual PPQN value.

# 13.51.3.2 $\sim$ perform() seq64::perform:: $\sim$ perform ( )

Finally, any active or inactive (but allocated) patterns/sequences are deleted, and their pointers nullified.

## 13.51.4 Member Function Documentation

```
13.51.4.1 is_modified() [1/2]
bool seq64::perform::is_modified ( ) const [inline]

13.51.4.2 modify()

void seq64::perform::modify ( ) [inline]
```

The setter that will, is\_modified(), is private. No one but perform and its friends should falsify this flag.

```
13.51.4.3 ppqn()
int seq64::perform::ppqn ( ) const [inline]

13.51.4.4 sequence_count()
int seq64::perform::sequence_count ( ) const [inline]
```

In many cases at startup, or when loading a file, there are no sequences yet, and still the code calls functions that try to access them.

#### 13.51.4.5 sequence\_max()

```
int seq64::perform::sequence_max ( ) const [inline]
```

## 13.51.4.6 is\_control\_status()

```
bool seq64::perform::is_control_status ( ) const [inline]
```

## Returns

Returns true if the m\_control\_status value is non-zero, which means that there is a queue, replace, or snapshot functionality in progress.

## 13.51.4.7 set\_edit\_sequence()

#### **Parameters**

seqnum

Pass in -1 to disable the edit-sequence number unconditionally. Use unset\_edit\_sequence() to disable it if it matches the current edit-sequence number.

## 13.51.4.8 unset\_edit\_sequence()

Disables the edit-sequence number if it matches the parameter.

#### **Parameters**

segnum The sequence number of the sequence to	unset.
---	--------

#### 13.51.4.9 is\_edit\_sequence()

#### **Parameters**

seqnum

Tests the parameter against m\_edit\_sequence. Returns true if that member is not -1, and the parameter matches it.

bpm

Provides the value for beats/measure. Also used to set the beats/measure in the JACK assistant object.

```
13.51.4.12 get_beat_width()
```

```
int seq64::perform::get_beat_width ( ) const [inline]
```

## 13.51.4.13 set\_beat\_width()

#### **Parameters**

Provides the value for beat-width. Also used to set the beat-width in the JACK assistant object.

```
13.51.4.14 clocks_per_metronome() [1/2]
```

#### 13.51.4.15 clocks\_per\_metronome() [2/2]

```
int seq64::perform::clocks_per_metronome ( ) const [inline]
```

## 13.51.4.16 set\_32nds\_per\_quarter()

## 13.51.4.17 get\_32nds\_per\_quarter()

```
int seq64::perform::get_32nds_per_quarter ( ) const [inline]
```

```
13.51.4.18 us_per_quarter_note() [1/2]
void seq64::perform::us_per_quarter_note (
             long upqn ) [inline]
13.51.4.19 us_per_quarter_note() [2/2]
long seq64::perform::us_per_quarter_note ( ) const [inline]
13.51.4.20 gui() [1/2]
const gui_assistant& seq64::perform::gui ( ) const [inline]
13.51.4.21 gui() [2/2]
gui_assistant& seq64::perform::gui ( ) [inline]
13.51.4.22 keys() [1/2]
const keys_perform& seq64::perform::keys ( ) const [inline]
13.51.4.23 keys() [2/2]
keys_perform& seq64::perform::keys ( ) [inline]
13.51.4.24 master_bus()
mastermidibus& seq64::perform::master_bus ( ) [inline]
13.51.4.25 filter_by_channel()
void seq64::perform::filter_by_channel (
             bool flag ) [inline]
13.51.4.26 is_running()
bool seq64::perform::is_running ( ) const [inline]
13.51.4.27 is_pattern_playing() [1/2]
bool seq64::perform::is_pattern_playing ( ) const [inline]
```

```
13.51.4.28 toggle_song_start_mode()
bool seq64::perform::toggle_song_start_mode ( ) [inline]
13.51.4.29 song_start_mode() [1/2]
void seq64::perform::song_start_mode (
             bool flag ) [inline]
13.51.4.30 song_start_mode() [2/2]
bool seq64::perform::song_start_mode ( ) const [inline]
13.51.4.31 is_jack_running()
bool seq64::perform::is_jack_running ( ) const [inline]
13.51.4.32 is_jack_master()
bool seq64::perform::is_jack_master ( ) const [inline]
13.51.4.33 enregister()
void seq64::perform::enregister (
             performcallback * pfcb ) [inline]
Parameters
 pfcb
       Provides the pointer to the performance callback.
13.51.4.34 toggle_jack_mode()
void seq64::perform::toggle_jack_mode ( ) [inline]
13.51.4.35 set_jack_mode()
bool seq64::perform::set_jack_mode (
             bool jack_button_active )
```

Note that we moved some of the code from perfedit::set\_jack\_mode() [the seq32 version] to this function.

<pre>jack_button_active   Indicates if the perfedit JACK button shows it is active.</pre>	ack button active	Indicates if the perfedit JACK button shows it is active.
---	-------------------	---

#### Returns

Returns true if JACK is running currently, and false otherwise.

## http://www.blitter.com/~russtopia/MIDI/~jglatt/tech/midispec/wheel.htm

Two data bytes follow the status. The two bytes should be combined together to form a 14-bit value. The first data byte's bits 0 to 6 are bits 0 to 6 of the 14-bit value. The second data byte's bits 0 to 6 are really bits 7 to 13 of the 14-bit value. In other words, assuming that a C program has the first byte in the variable First and the second data byte in the variable Second, here's how to combine them into a 14-bit value (actually 16-bit since most computer CPUs deal with 16-bit, not 14-bit, integers).

## **Parameters**

b0	The first byte to be combined.
b1	The second byte to be combined.

#### Returns

Returns the bytes basically OR'd together.

```
13.51.4.39 FF_rewind()
void seq64::perform::FF_rewind ( )
```

It changes m\_tick by a quarter of the number of ticks in a standard measure, with m\_excell\_FF\_RW (defaults to one) to factor the difference.

#### 13.51.4.40 FF\_RW\_timeout()

```
bool seq64::perform::FF_RW_timeout ( )
```

This function is used in the free function version of FF\_RW\_timeout() as a callback to the gtk\_timeout() function. It multiplies m\_excell\_FF\_RW by 1.1 as long as one of the fast-forward or rewind keys is held, and is less than 60.

#### Returns

Returns true if one of the fast-forward or rewind keys was held, leaving m\_excell\_FF\_RW at the last value it had. Otherwise, it resets the value to 1, and returns false.

```
13.51.4.41 start_from_perfedit() [1/2]
void seq64::perform::start_from_perfedit (
             bool flag ) [inline]
13.51.4.42 start_from_perfedit() [2/2]
bool seq64::perform::start_from_perfedit ( ) const [inline]
13.51.4.43 set_follow_transport()
void seq64::perform::set_follow_transport (
             bool flag ) [inline]
13.51.4.44 get_follow_transport()
bool seq64::perform::get_follow_transport ( ) const [inline]
13.51.4.45 toggle_follow_transport()
void seq64::perform::toggle_follow_transport ( ) [inline]
13.51.4.46 set_reposition()
void seq64::perform::set_reposition (
             bool postype = true ) [inline]
13.51.4.47 ff_rw_type() [1/2]
ff_rw_button_t seq64::perform::ff_rw_type ( ) [inline]
13.51.4.48 ff_rw_type() [2/2]
void seq64::perform::ff_rw_type (
              ff_rw_button_t button_type ) [inline]
13.51.4.49 rewind()
void seq64::perform::rewind (
             bool press ) [inline]
```

press If true, the status is set to FF\_RW\_REWIND, otherwise it is set to FF\_RW\_NONE.

## 13.51.4.50 fast\_forward()

#### **Parameters**

press If true, the status is set to FF\_RW\_FORWARD, otherwise it is set to FF\_RW\_NONE.

#### 13.51.4.51 reposition()

Used only in perfroll :: on\_key\_press\_event() to implement the Seq32 pointer-position feature.

#### **Parameters**

*tick* Provides the position value to be set.

#### 13.51.4.52 clear\_all()

```
bool seq64::perform::clear_all ( )
```

The mainwand module calls this function. Note that perform now handles the "is modified" flag on behalf of all external objects, to centralize and simplify the dirtying of a MIDI tune.

Anything else to clear? What about all the other sequence flags? We can beef up delete\_sequence() for them, at some point.

Added stazed code from 1.0.5 to abort clearing if any of the sequences are in editing.

#### Returns

Returns true if the clear-all operation could be performed. If false, then at least one active sequence was in editing mode.

#### 13.51.4.53 launch()

This function is called in main(). We collected all the calls here as a simplification, and renamed it because it is more than just initialization. This function must be called after the perform constructor and after the configuration file and command-line configuration overrides.

ppqn

Provides the PPQN value, which is either the default value (192) or is read from the "user" configuration file.

#### 13.51.4.54 new\_sequence()

Then it activates the pattern [this is done in the install\_sequence() function]. It doesn't deal with thrown exceptions.

This function is called by the seqmenu and mainwid objects to create a new sequence. We now pass this sequence to install\_sequence() to better handle potential memory leakage, and to make sure the sequence gets counted. Also, adding a new sequence from the user-interface is a significant modification, so the "is modified" flag gets set.

Change Note ca 2016-05-15 If enabled, wire in the MIDI buss override.

#### **Parameters**

seq The prospective sequence number of the new sequence.

#### 13.51.4.55 add\_sequence()

No check is made for a null pointer, but the install sequence() call will make sure such a pointer is officially logged.

This function checks for the preferred sequence number. This is the number that was specified by the Sequence Number meta-event for the current track. If the preferred sequence number is in the valid range (0 to m\_sequence — max) and it is not active, add it and activate it. Otherwise, iterate through all patterns from prefnum to m\_ esquence max and add and activate the first one that is not active, and then finish.

Finally, note that this function is used only by midifile, when reading in a MIDI song. Therefore, the "is modified" flag is *not* set by this function; loading a sequence from a file is not a modification that should lead to a prompt for saving the file later.

Todo Shouldn't we wrap around the sequence list if we can't find an empty sequence slot after prefnum?

**Todo** This function needs some deeper analysis against the original, in my opinion.

## Warning

The logic of the if-statement in this function was such that *prefnum* could be out-of-bounds in the else-clause. We reworked the logic to be airtight. This bug was caught by gcc 4.8.3 on CentOS, but not on gcc 4.9.3 on Debian Sid!

seq	The pointer to the pattern/sequence to add.
prefnum	The preferred sequence number of the pattern, as explained above. If this value is out-of-range, then it is basically ignored.

#### 13.51.4.56 delete\_sequence()

We now also solidify the deletion by setting the pointer to null after deletion, so it will blow up if accidentally accessed. The final act is to raise the "is modified" flag, since deleting an existing sequence is always a significant modification.

Now, this function obviously sets the "active" flag for the sequence to false. But there are a few other flags that are not modified; shouldn't we also falsify them here?

#### **Parameters**

seq	The sequence number of the sequence to be deleted. It is validated.
-----	---

#### 13.51.4.57 is\_sequence\_in\_edit()

## **Parameters**

seq Provides the sequence number to be checked.

#### Returns

Returns truen if the sequence's get\_editing() call returns true. Otherwise, false is returned, which can also indicate an illegal sequence number.

## 13.51.4.58 clear\_sequence\_triggers()

## **Parameters**

seq | Provides the desired sequence. The is\_active() function validates this value.

```
13.51.4.59 print_triggers()

void seq64::perform::print_triggers ( ) const

13.51.4.60 finish()

void seq64::perform::finish ( ) [inline]
```

A minor simplification for the main() routine, hides the JACK support macro.

## **Parameters**

tick | Provides the current JACK tick (pulse) value to set.

```
13.51.4.64 set_left_tick()
```

We let the caller determine if this setting is a modification. If the left tick is later than the right tick, the right tick is move to one measure past the left tick.

**Todo** The perform::m\_one\_measure member is currently hardwired to PPQN \* 4.

#### **Parameters**

tick	The tick (MIDI pulse) at which to place the left tick. If the left tick is greater than or equal to the right tick, then the right ticked is moved forward by one "measure's length" ( $m_ppqn * 4$ ) past the left tick.
setstart	If true (the default, and long-standing implicit setting), then the starting tick is also set to the left tick.

tick Provides the starting JACK tick (pulse) value to set.

```
13.51.4.67 get_start_tick()
```

```
midipulse seq64::perform::get_start_tick ( ) const [inline]
```

## 13.51.4.68 set\_right\_tick()

This setting is made only if the tick parameter is at or beyond the first measure. We let the caller determine is this setting is a modification.

## **Parameters**

tick	The tick (MIDI pulse) at which to place the right tick. If less than or equal to the left tick setting, then the left tick is backed up by one "measure's worth" (m_ppqn * 4) worth of ticks from the new right tick.
setstart	If true (the default, and long-standing implicit setting), then the starting tick is also set to the left tick, if that got changed.

## 13.51.4.69 get\_right\_tick()

```
midipulse seq64::perform::get_right_tick ( ) const [inline]

13.51.4.70 left_right_size()

double seq64::perform::left_right_size ( ) const [inline]
```

## Returns

Returns the difference between the right and left tick, cast to double.

## 13.51.4.71 is\_active()

#### **Parameters**

seq

The pattern number. It is checked for invalidity. This can lead to "too many" (i.e. redundant) checks, but we're trying to centralize such checks in this function.

#### Returns

Returns the value of the active-flag, or false if the sequence was invalid or null.

## 13.51.4.72 apply\_song\_transpose()

```
void seq64::perform::apply_song_transpose ( )
```

#### 13.51.4.73 set\_transpose()

```
void seq64::perform::set_transpose ( int \ t \ ) \ [inline]
```

#### 13.51.4.74 get\_transpose()

```
int seq64::perform::get_transpose ( ) const [inline]
```

## 13.51.4.75 get\_beats\_per\_minute()

```
int seq64::perform::get_beats_per_minute ( ) [inline]
```

#### Returns

Returns the value of beats/minute from the master buss.

## 13.51.4.76 set\_sequence\_control\_status()

Then the given status is OR'd into the m\_control\_status.

status	The status to be used.
Siaius	i i i c status to be useu.

#### 13.51.4.77 unset\_sequence\_control\_status()

```
void seq64::perform::unset_sequence_control_status ( int \ status \ )
```

Then the given status is reversed in m\_control\_status.

#### **Parameters**

status The status to	be used.
----------------------	----------

## 13.51.4.78 sequence\_playing\_toggle()

```
void seq64::perform::sequence_playing_toggle (  \quad \text{int } seq \ ) \\
```

If the m\_control\_status is c\_status\_queue, then the sequence's toggle\_queued() function is called. Otherwise, if it is c\_status\_replace, then the status is unset, and all sequences (?) are turned off. Then the sequence's toggle-playing() function is called.

#### **Parameters**

seq The sequence number of the sequence to be potentially toggled.

## 13.51.4.79 sequence\_playing\_change()

Used for the implementation of sequence\_playing\_on() and sequence\_playing\_off().

#### **Parameters**

seq	The number of the sequence to be turned off.
on	True if the sequence is to be turned on, false if it is to be turned off.

## 13.51.4.80 sequence\_playing\_on()

```
void seq64::perform::sequence_playing_on (
    int seq ) [inline]
```

## **Parameters**

seq The sequence number of the sequence to turn on.

#### 13.51.4.81 sequence\_playing\_off()

#### **Parameters**

seq The sequence number of the sequence to turn off.

#### 13.51.4.82 mute\_all\_tracks()

Covers tracks from 0 to m\_sequence\_max.

We have to also set the sequence's playing status, in opposition to the mute status, in order to see the sequence status change on the user-interface. HMMMMMM.

#### **Parameters**

flag | If true (the default), the song-mute of the sequence is turned on. Otherwise, it is turned off.

#### 13.51.4.83 toggle\_all\_tracks()

```
void seq64::perform::toggle_all_tracks ( )
```

Covers tracks from 0 to m\_sequence\_max.

## 13.51.4.84 armed\_saved()

```
bool seq64::perform::armed_saved ( ) const [inline]
```

## 13.51.4.85 toggle\_playing\_tracks()

```
void seq64::perform::toggle_playing_tracks ( )
```

## 13.51.4.86 mute\_screenset()

ss	The screen-set to be operated upon.	
flaa	If true (the default), the song-mute of the sequence is turned on. Otherwise, it is turned off.	
	0	

#### 13.51.4.87 output\_func()

```
void seq64::perform::output_func ( )
```

This function is called by the free function output\_thread\_func(). Here's how it works:

```
It runs while m_outputing is true.MORE TO COME. Yeah, a lot more to come. It is a complex function.
```

Change Note ca 2016-01-26 Hurray, seq24 is coming back to life! We see that there is a fix for clock tick drift here, which relies on using long and long long values. See the Changelog for seq24 0.9.3.

- 1. Get delta time (current last).
- 2. Get delta ticks from time.
- Add to current\_ticks.
- 4. Compute prebuffer ticks.
- 5. Play from current tick to prebuffer.

Figure out how much time we need to sleep, and do it.

Now we want to trigger every c\_thread\_trigger\_width\_us, and it took us delta\_us to play(). Also known as the "sleeping\_us".

Check MIDI clock adjustment. Note that we replaced "60000000.0f / m\_ppqn / bpm" with a call to a function. We also removed the "f" specification from the constants.

```
13.51.4.88 input_func()
```

```
void seq64::perform::input_func ( )
```

#### Stazed:

```
http://www.blitter.com/~russtopia/MIDI/~jglatt/tech/midispec/ssp.htm

Example: If a Song Position value of 8 is received, then a sequencer (or drum box) should cue playback to the third quarter note of the song. (8 MIDI beats * 6 MIDI clocks per MIDI beat = 48 MIDI Clocks. Since there are 24 MIDI Clocks in a quarter note, the first quarter occurs on a time of 0 MIDI Clocks, the second quarter note occurs upon the 24th MIDI Clock, and the third quarter note occurs on the 48th MIDI Clock).

8 MIDI beats * 6 MIDI clocks per MIDI beat = 48 MIDI Clocks.
```

#### 13.51.4.89 set\_group\_mute\_state()

The index value is the track number offset by the number of the selected mute group (which is equivalent to a set number) times the number of sequences in a set. This function is used in midifile and optionsfile when parsing the file to get the initial mute-groups.

gtrack	The number of the track to be muted/unmuted.
muted	This boolean indicates the state to which the track should be set.

## 13.51.4.90 get\_group\_mute\_state()

Uses the <a href="multi-group\_offset">multi-group\_offset</a>() function. This function is used in midifile and optionsfile when writing the file to get the initial multi-groups.

#### **Parameters**

gtrack	The number of the track for which the state is to be obtained. Like set_group_mute_state(), this value	1
	is offset by adding m_mute_group_selected * m_seqs_in_set.	

#### Returns

Returns the desired m\_mute\_group[] value.

## 13.51.4.91 set\_offset()

Sets m\_offset = offset \* c\_mainwnd\_rows \* c\_mainwnd\_cols.

#### **Parameters**

offset The desired offset.
----------------------------

## 13.51.4.92 get\_offset()

```
int seq64::perform::get_offset ( ) const [inline]
```

## 13.51.4.93 save\_playing\_state()

```
void seq64::perform::save_playing_state ( )
```

Inactive patterns get the value set to false. Used in unsetting the snapshot status (c\_status\_snapshot).

```
13.51.4.94 restore_playing_state()
void seq64::perform::restore_playing_state ( )
Used in unsetting the snapshot status (c_status_snapshot).
13.51.4.95 key_name()
std::string seq64::perform::key_name (
              unsigned int k ) const [inline]
Parameters
    The key number for which to return the string name of the key.
13.51.4.96 get_key_events()
keys_perform::SlotMap& seq64::perform::get_key_events ( ) [inline]
13.51.4.97 get_key_groups()
keys_perform::SlotMap& seq64::perform::get_key_groups ( ) [inline]
13.51.4.98 get_key_events_rev()
keys_perform::RevSlotMap& seq64::perform::get_key_events_rev ( ) [inline]
13.51.4.99 get_key_groups_rev()
keys_perform::RevSlotMap& seq64::perform::get_key_groups_rev ( ) [inline]
13.51.4.100 show_ui_sequence_key() [1/2]
bool seq64::perform::show_ui_sequence_key ( ) const [inline]
Used in mainwid, options, optionsfile, userfile, and perform.
13.51.4.101 show_ui_sequence_key() [2/2]
void seq64::perform::show_ui_sequence_key (
             bool flag ) [inline]
```

flag | Provides the flag to set into keys().show\_ui\_sequence\_key().

```
13.51.4.102 show_ui_sequence_number() [1/2]
bool seq64::perform::show_ui_sequence_number ( ) const [inline]
```

Used in mainwid, optionsfile, and perform.

## **Parameters**

flag | Provides the value to set into keys().show\_ui\_sequence\_number().

## 13.51.4.104 lookup\_keyevent\_key()

If we're not in legacy mode, then we adjust for the screenset, so that screensets greater than 0 can also show the correct key name, instead of a question mark.

Legacy seq24 already responds to the toggling of the mute state via the shortcut keys even if screenset > 0, but it shows the question mark.

## **Parameters**

seqnum	The number of the sequence for which to return the event key.

## Returns

Returns the desired key. If there is no such value, then the period ('?') character is returned.

## 13.51.4.105 lookup\_keyevent\_seq()

The inverse of lookup\_keyevent\_key().

keycode The number of the event key for which to return the configured sequence number
--

#### Returns

Returns the desired sequence. If there is no such value, then a sequence number of 0 is returned.

## 13.51.4.106 lookup\_keygroup\_key()

#### **Parameters**

#### Returns

Returns the desired key. If there is no such value, then the period ('.') character is returned.

## 13.51.4.107 lookup\_keygroup\_group()

The inverse of lookup\_keygroup\_key().

#### **Parameters**

keycode	The number of the group key for which to return the configured sequence number.
---------	---

## Returns

Returns the desired group number. If there is no such value, then a group number of 0 is returned.

## 13.51.4.108 start\_playing()

```
void seq64::perform::start_playing (
                bool songmode = false )
```

We've reversed the start() and start\_jack() calls so that JACK is started first, to match all of the other use-cases for playing that we've found in the code. Note that the complementary function, stop\_playing(), is an inline function defined in the header file.

The perform::start() function passes its boolean flag to perform::inner\_start(), which sets the playback mode to that flag; if that flag is false, that turns off "song" mode. So that explains why mute/unmute is disabled.

Playback use cases:

These use cases are meant to apply to either a Seq32 or a regular build of Sequencer64, eventually. Currently, the regular build does not have a concept of a "global" perform song-mode flag.

- -# mainwnd.
  - -# Play. If the perform song-mode is "Song", then use that mode.
     Otherwise, use "Live" mode.
  - -# Stop. This action is modeless here. In ALSA, it will cause a rewind (but currently sequently doesn't rewind until Play is clicked, a minor bug).
  - -# Pause. Same processing as Play or Stop, depending on current status. When stopping, the progress bars in seqroll and perfroll remain at their current point.
- -# perfedit.
  - -# Play. Override the current perform song-mode to use "Song".
  - -# Stop. Revert the perfedit setting, in case play is restarted or resumed via mainwnd.
  - -# Pause. Same processing as Play or Stop, depending on current status.
- -# ALSA versus JACK. One issue here is that, if JACK isn't "running" at all (i.e. we are in ALSA mode), then we cannot be JACK Master.

#### **Parameters**

#### songmode

Indicates if the caller wants to start the playback in Song mode (sometimes erroneously referred to as "JACK mode"). In the seq32 code at GitHub, this flag was identical to the "global\_jack\_start\_mode" flag, which is true for Song mode, and false for Live mode. False disables Song mode, and is the default, which matches seq24. Generally, we pass true in this parameter if we're starting playback from the perfedit window. It alters the m\_start\_from\_perfedit member, not the m\_song\_start\_mode member (which replaces the global flag now).

## 13.51.4.109 pause\_playing()

Currently almost the same as stop\_playing(), but expanded as noted in the comments so that we ultimately have more granular control over what happens. We're researching the whole sequence of stopping and starting, and it can be tricky to make correct changes.

We still need to make restarting pick up at the same place in ALSA mode; in JACK mode, JACK transport takes care of that feature.

#### **Parameters**

songmode

Indicates that, if resuming play, it should play in Song mode (true) or Live mode (false). See the comments for the start playing() function.

#### 13.51.4.110 stop\_playing()

```
void seq64::perform::stop_playing ( )
```

Stops playback, turns off the (new) m\_dont\_reset\_ticks flag, and set the "is-pattern-playing" flag to false. With stop, reset the start-tick to either the left-tick or the 0th tick (to be determined, currently resets to 0).

```
13.51.4.111 start_key()
```

```
void seq64::perform::start_key (
          bool songmode = false )
```

Meant to be used by GUIs to unify the treatment of keys versus buttons.

## **Parameters**

songmode The live/play mode parameter to be passed along to the key processor. Defaults to false (live mode).

## 13.51.4.112 pause\_key()

```
void seq64::perform::pause_key (
          bool songmode = false )
```

Meant to be used by GUIs to unify the treatment of keys versus buttons.

#### **Parameters**

songmode	The live/play mode parameter to be passed along to the key processor, when starting playback.	
	Defaults to false (live mode).	

## 13.51.4.113 stop\_key()

```
void seq64::perform::stop_key ( )
```

Meant to be used by GUIs to unify the treatment of keys versus buttons.

#### 13.51.4.114 learn\_toggle()

```
void seq64::perform::learn_toggle ( ) [inline]
```

## 13.51.4.115 decrement\_beats\_per\_minute()

```
int seq64::perform::decrement_beats_per_minute ( ) [inline]
```

Actually does a lot of work in those function calls.

## 13.51.4.116 increment\_beats\_per\_minute()

```
int seq64::perform::increment_beats_per_minute ( ) [inline]
```

Actually does a lot of work in those function calls.

## 13.51.4.117 decrement\_screenset()

bool seq64::perform::highlight (

```
int seq64::perform::decrement_screenset ( ) [inline]

13.51.4.118 increment_screenset()

int seq64::perform::increment_screenset ( ) [inline]

13.51.4.119 highlight()
```

This setting is currently a build-time option, but could be made a run-time option later.

const sequence & seq ) const [inline]

## **Parameters**

seq Provides a reference to the desired sequence.

#### 13.51.4.120 is\_smf\_0()

## **Parameters**

seq Provides a reference to the desired sequence.

# **13.51.4.121** get\_sequence() [1/2]

This is the const version.

## **Parameters**

seq The prospective sequence number.

## Returns

Returns the value of m\_seqs[seq] if seq is valid. Otherwise, a null pointer is returned.

seq The prospective sequence number.

#### Returns

Returns the value of m\_seqs[seq] if seq is valid. Otherwise, a null pointer is returned.

# 

This function is use in mainwnd when toggling the mute/unmute setting using keyboard keys.

#### **Parameters**

seq The sequence's control-key number, which is relative to the current screen-set.

# 13.51.4.124 sequence\_label()

This string goes on the bottom-left of those user-interface elements.

The format of this string is something like the following example, depending on the "show sequence numbers" option. The values shown are, in this order, sequence number (if allowed), buss number, channel number, beats per bar, and beat width.

```
No sequence number: 31-16 4/4
Sequence number: 9 31-16 4/4
```

The sequence number and buss number are re 0, while the channel number is displayed re 1, unless it is an SMF 0 null channel (0xFF), in which case it is 0.

## Note

Later, we could add the sequence hot-key to this string, though showing that is not much use in perfnames. Also, this function is a stilted mix of direct access and access through sequence number.

seq

Provides the reference to the sequence, use for getting the sequence parameters to be written to the label string.

#### Returns

Returns the filled in label if the sequence is active. Otherwise, an empty string is returned.

## 13.51.4.125 set\_input\_bus()

This function is called by options::input\_callback().

**Tricky Code** See the bus parameter. We should provide two separate functions for this feature, but it is already combined into one input-callback function with a lot of other functionality in the options module.

#### **Parameters**

bus	If this value is greater than SEQ64_DEFAULT_BUSS_MAX (32), then it is treated as a user-interface
	flag (PERFORM_KEY_LABELS_ON_SEQUENCE or PERFORM_NUM_LABELS_ON_SEQUENCE)
	that causes all the sequences to be dirtied, and thus get redrawn with the new user-interface setting.
active	Indicates whether the buss or the user-interface feature is active or inactive.

#### 13.51.4.126 mainwnd\_key\_event()

This function handles the keys for the functions of replace, queue, keep-queue, snapshots, toggling mute groups, group learn, and playing screenset. For further keystroke processing, see mainwand :: on\_key\_press\_event().

Keys not handled here are handled in mainwnd: bpm up & down; screenset up & down.

#### **Parameters**

k The keystroke object to be handled.

## Returns

Returns true if the key was handled.

#### 13.51.4.127 perfroll\_key\_event()

```
bool seq64::perform::perfroll_key_event (
```

```
const keystroke & k,
int drop_sequence )
```

It handles the Ctrl keys for cut, copy, paste, and undo.

The "is modified" flag is raised if something is deleted, but we cannot yet handle the case where we undo all the changes. So, for now, we play it safe with the user, even if the user gets annoyed because he knows that he undid all the changes.

#### **Parameters**

k	The keystroke object to be handled.
drop_sequence	Provides the index of the sequence whose selected trigger is to be cut, copied, or pasted.
	Undo and redo are now supported.

#### Returns

Returns true if the key was handled.

#### 13.51.4.128 playback\_key\_event()

To be used in mainwnd, perfedit, and seqroll.

The start/end key may be the same key (e.g. Space) to allow toggling when the same key is mapped to both triggers.

Checking is\_running() may not work completely in JACK.

Change Note layk 2016-10-11 Issue #42 to prevent inadvertent step-edit in sequence :: stream\_event(). We did it slightly different to save a little code; also found a spot that was missed.

## **Parameters**

k	Provides the encapsulated keystroke to check.
songmode	Provides the "jack flag" needed by the mainwind, seqroll, and perfedit windows. Defaults to false,
	which disables Song mode, and enables Live mode. But using Song mode seems to make the pause key not work in the performance editor.

## Returns

Returns true if the keystroke matched the start, stop, or (new) pause keystrokes. Generally, no further keystroke processing is needed in this case.

#### 13.51.4.129 move\_triggers()

direction | Specifies the desired direction; false = left, true = right.

```
13.51.4.130 copy_triggers()
void seq64::perform::copy_triggers ( )
```

This copies the triggers between the L marker and R marker to the R marker.

Too bad we cannot yet keep track of all the undoes for the sake of properly handling the "is modified" flag.

This function now has a new parameter. Not added to this function is the seemingly redundant undo-push the seq32 code does; is this actually a seq42 thing?

Also, there is still an issue with our undo-handling for a single track. See pop\_trigger\_undo().

#### **Parameters**

track

A new parameter (found in the stazed seq32 code) that allows this function to operate on a single track. A parameter value of SEQ64\_ALL\_TRACKS (-1, the default) implements the original behavior.

```
13.51.4.132 pop_trigger_undo()
void seq64::perform::pop_trigger_undo ( )
```

**Todo** Look at seq32/src/perform.cpp and the perform :: push\_trigger\_undo(track) function, which has a track parameter that has a -1 values the supports all tracks. It requires two new vectors (one for undo, one for redo), two new flags (likewise). We've put this code in place, no longer macroed out, now permanent.

See the sequence::is\_dirty\_main() function.

seq The pattern number. It is checked for validity.

#### Returns

Returns the was-active-main flag value, before setting it to false. Returns false if the pattern was invalid.

## 13.51.4.135 is\_dirty\_edit()

## **Parameters**

seq The pattern number. It is checked for validity.

#### Returns

Returns the was-active-edit flag value, before setting it to false. Returns false if the pattern was invalid.

## 13.51.4.136 is\_dirty\_perf()

#### **Parameters**

seq The pattern number. It is checked for validity.

#### Returns

Returns the was-active-perf flag value, before setting it to false. Returns false if the pattern/sequence number was invalid.

## 13.51.4.137 is\_dirty\_names()

## **Parameters**

seq The pattern number. It is checked for validity.

#### Returns

Returns the was-active-names flag value, before setting it to false. Returns false if the pattern/sequence number was invalid.

#### 13.51.4.138 is\_exportable()

#### **Parameters**

seq The index of the desired sequence.

#### Returns

Returns true if the sequence has the three properties noted above.

#### 13.51.4.139 set\_screenset()

It's not clear that we need to set the "is modified" flag just because we changed the screen set, so we don't.

As a new feature, we would like to queue-mute the previous screenset, and queue-unmute the newly-selected screenset. Still working on getting it right.

#### **Parameters**

SS

The index of the desired new screen set. It is forced to range from 0 to m\_max\_sets - 1. The clamping seems weird, but hews to seq24. What it does is let the user wrap around the screen-sets in the user interface.

## 13.51.4.140 get\_screenset()

```
int seq64::perform::get_screenset ( ) const [inline]

13.51.4.141  get_playing_screenset()

int seq64::perform::get_playing_screenset ( ) const [inline]

13.51.4.142  have_undo()
```

```
bool seq64::perform::have_undo ( ) const [inline], [private]
```

```
13.51.4.143 set_have_undo()
```

Once it is set, it remains set, unless cleared by saving the file.

```
13.51.4.144 have_redo()
```

```
bool seq64::perform::have_redo ( ) const [inline], [private]
```

#### 13.51.4.145 set\_have\_redo()

```
void seq64::perform::set_have_redo (
    bool redo ) [inline], [private]
```

## 13.51.4.146 split\_trigger()

#### **Parameters**

seqnum	Indicates the sequence that needs to have its trigger split.
tick	The MIDI pulse number at which the trigger should be split.

## 13.51.4.147 get\_max\_trigger()

```
midipulse seq64::perform::get_max_trigger ( ) [private]
```

## Returns

Returns the highest trigger value, or zero. It is not clear why this function doesn't return a "no trigger found" value. Is there always at least one trigger, at 0?

## 13.51.4.148 collapse()

```
void seq64::perform::collapse ( ) [inline], [private]
```

## 13.51.4.149 copy()

```
void seq64::perform::copy ( ) [inline], [private]
```

#### 13.51.4.150 expand()

```
void seq64::perform::expand ( ) [inline], [private]
13.51.4.151 midi_control_toggle()
midi_control & seq64::perform::midi_control_toggle (
```

int seq ) [private]

#### **Parameters**

seq

Provides the index to pass to valid\_midi\_control\_seq() to obtain a control value (such as c\_midi\_control\_bpm\_up) to use to retrieve the desired midi\_control object. Note that this value is unsigned simply to make the legality check of the parameter easier.

#### Returns

Returns the "toggle" value if the sequence is valid, and a reference to sm\_mc\_dummy otherwise.

#### 13.51.4.152 midi\_control\_on()

```
midi_control & seq64::perform::midi_control_on (
            int seq ) [private]
```

#### **Parameters**

sea

Provides the index to pass to valid\_midi\_control\_seq() to obtain a control value (such as c\_midi\_control\_bpm\_up) to use to retrieve the desired midi\_control object.

## Returns

Returns the "on" value if the sequence is valid, and a reference to sm mc dummy otherwise.

## 13.51.4.153 midi\_control\_off()

```
midi_control & seq64::perform::midi_control_off (
            int seq ) [private]
```

## **Parameters**

Provides a control value (such as c\_midi\_control\_bpm\_up) to use to retrieve the desired midi\_control object.

## Returns

Returns the "off" value if the sequence is valid, and a reference to sm\_mc\_dummy otherwise.

#### 13.51.4.154 handle\_midi\_control()

#### **Parameters**

ctrl	The MIDI control value to use to perform an operation.
state	The state of the control, used with the following
	values:

```
c_midi_control_mod_replace
c_midi_control_mod_snapshot
c_midi_control_mod_queue
c_midi_control_mod_gmute
c_midi_control_mod_glearn
```

## 13.51.4.155 get\_screen\_set\_notepad()

const std::string & notepad ) [private]

#### **Parameters**

screenset	The ID number of the string set, an index into the m_screen_set_notepad[] array. This value is
	validated.

## Returns

Returns a reference to the desired string, or to an empty string if the screen-set number is invalid.

## 13.51.4.156 current\_screen\_set\_notepad()

screenset	The ID number of the string set, an index into the m_screen_set_xxx[] arrays.
notepad	Provides the string date to copy into the notepad. Not sure why a pointer is used, instead of nice
	"const std::string &" parameter. And this pointer isn't checked. Fixed.

```
13.51.4.158 set_screen_set_notepad() [2/2]
void seq64::perform::set_screen_set_notepad (
```

const std::string & note ) [inline], [private]

#### **Parameters**

note The string value to set into the notepad text.

#### 13.51.4.159 set\_playing\_screenset()

```
void seq64::perform::set_playing_screenset ( ) [private]
```

This function is called when one of the snapshot keys is pressed.

For each value up to m\_seqs\_in\_set (32), the index of the current sequence in the current screen set (m\_playing ← \_screen) is obtained. If the sequence is active and the sequence actually exists, it is processed; null sequences are no longer flagged as an error, they are just ignored.

Modifies m\_playing\_screen, m\_playscreen\_offset, stores the current playing-status of each sequence in m\_tracks ← \_mute\_state[], and then calls mute\_group\_tracks(), turns on unmuted tracks in the current screen-set.

Basically, this function retrieves and saves the playing status of the sequences in the current play-screen, sets the play-screen to the current screen-set, and then mutes the previous play-screen. It is called via the c\_midi\_control \_\_play\_ss value or via the set-playing-screen-set keystroke.

## 13.51.4.160 any\_group\_unmutes()

```
bool seq64::perform::any_group_unmutes ( ) const [private]
```

#### Returns

Returns true if there are any unmute statuses in the mute-group array. If they're all zero, we don't need to save them

## 13.51.4.161 mute\_group\_tracks()

```
void seq64::perform::mute_group_tracks ( ) [private]
```

It loops through every screen-set. In each screen-set, it acts on each active sequence. If the active sequence is in the current "in-view" screen-set (m\_screenset as opposed to m\_playing\_screen), and its m\_track\_mute\_state[] is true, then the sequence is turned on, otherwise it is turned off.

Change Note tdeagan 2015-12-22 via git pull. Replaced m\_playing\_screen with m\_screenset.

It seems to us that the for (g) clause should have g range from 0 to m\_max\_sets, not m\_seqs\_in\_set.

## 13.51.4.162 select\_and\_mute\_group()

Called in perform and in mainwnd.

group Provides the group number for the group to be muted.

#### 13.51.4.163 set\_song\_mute()

The sequence::set\_song\_mute() and toggle\_song\_mute() functions do all the work, including mp-dirtying the sequence.

We've modified this function to call mute\_all\_tracks() and toggle\_all\_tracks() in order to consolidate the code and (cough cough) fix a bug in this functionality from the mainwind menu.

#### **Parameters**

op | Provides the "flag" that indicates if this function is to set mute on, off, or to toggle the mute status.

## 13.51.4.164 set\_mode\_group\_mute()

```
void seq64::perform::set_mode_group_mute ( ) [inline], [private]
```

## 13.51.4.165 unset\_mode\_group\_mute()

```
void seq64::perform::unset_mode_group_mute ( ) [inline], [private]
```

## 13.51.4.166 select\_group\_mute()

Then, no matter what, it makes the desired mute-group the selected mute-group. Compare to set\_and\_copy\_
mute\_group().

One thing to note is that, once saved, then, if used, it is applied to the current screen-set, even if it is not the screen-set whose playing status were saved.

#### **Parameters**

mutegroup	The number of the desired mute group, clamped to be between 0 and m_seqs_in_set-1.
	Obviously, it is the set whose state is to be stored, if in group-learn mode.

## 13.51.4.167 set\_mode\_group\_learn()

```
void seq64::perform::set_mode_group_learn ( ) [private]
```

This function is called via a MIDI control c\_midi\_control\_mod\_glearn and via the group-learn keystroke.

```
13.51.4.168 unset_mode_group_learn()
void seq64::perform::unset_mode_group_learn ( ) [private]
```

Then unsets the group-learn mode flag. This function is called via a MIDI control c\_midi\_control\_mod\_glearn, via the group-learn keystroke, and in mainwnd::on\_key\_press\_event(), to end the group-learn mode.

Shouldn't this function also call this one, to perfectly complement set\_mode\_group\_learn: unset\_mode\_group\_ \to mute(). Too tricky.

Then the mute-group is stored in m\_tracks\_mute\_state[], which holds states for only the number of sequences in a set

Compare to select\_group\_mute(); its main difference is that it will at least copy the states even if not in group-learn mode. And, if in group-learn mode, it will grab the playing states of the sequences before copying them.

This function is used only once, in select\_and\_mute\_group(). It used to be called just select\_mute\_group(), but that's too easy to confuse with select\_group\_mute().

Change Note tdeagan 2015-12-22 via git pull: git pull https://github.com/TDeagan/sequencer64. 

git mute\_groups m\_screenset replaces m\_playscreen\_offset.

#### **Parameters**

mutegroup	Provides the mute-group to select.

## 13.51.4.171 start()

## **Parameters**

songmode If true, playback is to be in Song mode. Otherwise, it is to be in Live mode.

```
13.51.4.172 stop()
```

```
void seq64::perform::stop ( ) [private]
```

The logic seems backward here, in that we call inner\_stop() if JACK is not running. Or perhaps we misunderstand the meaning of m jack running?

#### Stazed:

This function's sole purpose was to prevent inner\_stop() from being called internally when JACK was running... potentially twice. inner\_stop() was called by output\_func() when JACK sent a JackTransportStopped message. If seq42 initiated the stop, then stop\_jack() was called which then triggered the JackTransportStopped message to output\_func() which then triggered the bool stop\_jack to call inner\_stop(). The output\_func() call to inner\_stop() is only necessary when some other JACK client sends a jack\_transport\_stop message to JACK, not when it is initiated by seq42. The method of relying on JACK to call inner\_stop() when internally initiated caused a (very) obscure apparent freeze if you press and hold the start/stop key if set to toggle. This occurs because of the delay between JackTransportStarting and JackTransportStopped if both triggered in rapid succession by holding the toggle key down. The variable global\_is\_running gets set false by a delayed inner\_stop() from JACK after the start (true) is already sent. This means the global is set to true when JACK is actually off (false). Any subsequent presses to the toggle key send a stop message because the global is set to true. Because JACK is not running, output\_func() is not running to send the inner\_stop() call which resets the global to false. Thus an apparent freeze as the toggle key endlessly sends a stop, but inner\_stop() never gets called to reset. Whoo! So, to fix this we just need to call inner\_stop() directly rather than wait for JACK to send a delayed stop, only when running. This makes the whole purpose of this stop() function unneeded. The check for m\_jack\_running is commented out and this function could be removed. It is being left for future generations to ponder!!!

#### 13.51.4.173 start\_jack()

```
void seq64::perform::start_jack ( ) [inline], [private]

13.51.4.174  stop_jack()

void seq64::perform::stop_jack ( ) [inline], [private]

13.51.4.175  position_jack()

void seq64::perform::position_jack (
```

midipulse tick = 0 ) [private]

bool songmode,

songmode	If true, playback is to be in Song mode. Otherwise, it is to be in Live mode.
tick	Provides the pulse position to be set. The default value is 0.

#### 13.51.4.176 off\_sequences()

```
void seq64::perform::off_sequences ( ) [private]

13.51.4.177 all_notes_off()

void seq64::perform::all_notes_off ( ) [private]
```

Then flush the master MIDI buss.

## 13.51.4.178 set\_active()

If setting it active, the sequence::number() setter is called. It won't modify the sequence's internal copy of the sequence number if it has already been set.

#### **Parameters**

seq	Provides the prospective sequence number.
active	True if the sequence is to be set to the active state.

#### 13.51.4.179 set\_was\_active()

Why do we need this routine?

## **Parameters**

seq The pattern number. It is checked for validity.

## 13.51.4.180 reset\_sequences()

Note that these calls are folded into one member function of the sequence class. Finally, flush the master MIDI buss.

nauco	Try to prevent notes from lingering on pause if true. By default, it is false.
vause	I II V to prevent notes nom indenina on bause il true. Di delauit, it is faise, il

## 13.51.4.181 play()

Starts the playing of all the patterns/sequences.

This function just runs down the list of sequences and has them dump their events. It skips sequences that have no playable MIDI events.

Note how often the "s" (sequence) pointer was used. It was worth offloading all these calls to a new sequence function. Hence the new sequence::play\_queue function.

#### **Parameters**

*tick* Provides the tick at which to start playing.

#### 13.51.4.182 set\_orig\_ticks()

This is really the "last tick" value, so we renamed sequence::set\_orig\_tick() to sequence::set\_last\_tick().

#### **Parameters**

*tick* Provides the last-tick value to be set for each sequence that is active.

#### 13.51.4.183 set\_beats\_per\_minute()

Replaces perform::set\_bpm() from seq24.

The value is set only if neither JACK nor this performance object are running.

It's not clear that we need to set the "is modified" flag just because we changed the beats per minute. This setting does get saved to the MIDI file, with the c\_bpmtag.

## **Parameters**

bpm Provides the beats/minute value to be set. It is clamped, if necessary, between the values SEQ64\_MINIMUM\_BPM to SEQ64\_MAXIMUM\_BPM. They provide a wide range of speeds, well beyond what normal music needs.

#### 13.51.4.184 set\_looping()

```
void seq64::perform::set_looping (
```

```
bool looping ) [inline], [private]
```

looping The boolean value to set for looping, used in the performance editor.

#### 13.51.4.185 max\_active\_set()

```
int seq64::perform::max_active_set ( ) const [private]
```

#### Returns

Returns the value of the highest active set. A value of 0 represents the first set. If no sequences are active, then -1 is returned.

#### 13.51.4.186 launch\_input\_thread()

```
void seq64::perform::launch_input_thread ( ) [private]
```

This might be a good candidate for a small thread class derived from a small base class.

## 13.51.4.187 launch\_output\_thread()

```
void seq64::perform::launch_output_thread ( ) [private]
```

This might be a good candidate for a small thread class derived from a small base class.

## 13.51.4.188 init\_jack()

```
bool seq64::perform::init_jack ( ) [inline], [private]
```

Who calls this routine? The main() routine of the application [via launch()], and the options module, when the Connect button is pressed.

#### Returns

Returns the result of the init() call; true if JACK sync is now running. If JACK support is not built into the application, then this function returns false, to indicate that JACK is (definitely) not running.

#### 13.51.4.189 deinit\_jack()

```
bool seq64::perform::deinit_jack ( ) [inline], [private]
```

Called by launch() and in the options module, when the Disconnect button is pressed.

## Returns

Returns the result of the init() call; false if JACK sync is now no longer running. If JACK support is not built into the application, then this function returns true, to indicate that JACK is (definitely) not running.

#### 13.51.4.190 seq\_in\_playing\_screen()

seq Provides the index of the desired sequence.

#### Returns

Returns true if the sequence adheres to the conditions noted above.

#### **Parameters**

flag The value of the modified flag to be set.

#### 13.51.4.192 valid\_midi\_control\_seq()

We were checking against c\_midi\_track\_ctrl as well, but that was a bug. This function is meant to check that the supplied sequence number does not exceed the value of c\_midi\_controls (32 \* 2 + 10 = 74). The track (sequence or pattern) controls rangoe from 0 to 64. Next come the "c\_midi\_control" values: bpm\_up, bpm\_dn, ..., play\_ss, and, lastly, c\_midi\_controls itself.

#### **Parameters**

seq The sequence number value that should be inside the c\_midi\_controls range.

## Returns

Returns true if the sequence number is valid for accessing the MIDI control values. For this function, no error print-out is generated.

## 13.51.4.193 is\_screenset\_valid()

e.
e

#### Returns

Returns true if the parameter is valid. For this function, no error print-out is generated.

#### 13.51.4.194 set\_running()

```
void seq64::perform::set_running (
                bool running ) [inline], [private]
```

#### **Parameters**

```
13.51.4.195 is_pattern_playing() [2/2]
```

## 13.51.4.196 set\_playback\_mode()

## **Parameters**

playbackmode The value of the playback mode flag to be set.

## 13.51.4.197 mute\_group\_offset()

#### **Parameters**

track The number of the desired track.

## 13.51.4.198 is\_seq\_valid()

Also see the function is\_mseq\_valid(), which also checks the pointer stored in the m\_seq[] array.

We considered checking the *seq* param against sequence\_count(), but this function is called while creating sequences that add to that count, so we continue checking against the "container" size. Also, it is possible to have holes in the array representing inactive sequences, so that sequencer\_count() would be too limiting.

sea	The sequencer number, in interval [0, m_sequence_max).
009	= ==q===

#### Returns

Returns true if the sequence number is valid.

#### 13.51.4.199 is\_mseq\_valid()

It also evaluates the m\_seq[seq] pointer value.

#### Note

Since we can have holes in the sequence array, where there are inactive sequences, we check if the sequence is even active before emitting a message about a null pointer for the sequence. We only want to see messages that indicate actual problems.

#### **Parameters**

seq

Provides the sequence number to be checked. It is checked for validity. We cannot compare the sequence number versus the sequence\_count(), because the current implementation can have inactive holes (with null pointers) interspersed with active pointers.

## Returns

Returns true if the sequence number is valid as per is\_seq\_valid(), and the sequence pointer is not null.

## 13.51.4.200 install\_sequence()

It is common code and using it prevents inconsistences. It assumes values have already been checked. It does not set the "is modified" flag, since adding a sequence by loading a MIDI file should not set it. Compare new\_\circ sequence(), used by mainwid and seqmenu, with add\_sequence(), used by midifile.

seq	The pointer to the pattern/sequence to add.
seqnum	The sequence number of the pattern to be added. Not validated, to save some time.

#### Returns

Returns true if a sequence was removed, or the sequence was successfully added. In other words, if a real change in sequence pointers occurred. It is up to the caller to decide if the change warrants setting the "is modified" flag.

#### 13.51.4.201 inner\_start()

Then, if not is\_running(), the playback mode is set to the given state. If that state is true, call off\_sequences(). Set the running status, and signal the condition. Then unlock.

#### Minor issue:

```
In ALSA mode, restarting the sequence moves the progress bar to the beginning of the sequence, even if just pausing. This is fixed by compiling with SEQ64_PAUSE_SUPPORT, which disables calling off_sequences() when starting playback from the song editor / performance window.
```

#### **Parameters**

songmode	Sets the playback mode, and, if true, turns off all of the sequences before setting the is-running	]
	condition.	

## 13.51.4.202 inner\_stop()

```
void seq64::perform::inner_stop (
          bool midiclock = false ) [private]
```

Note that we do need to set the running flag to false here, even when JACK is running. Otherwise, JACK starts ping-ponging back and forth between positions under some circumstances.

However, if JACK is running, we do not want to reset the sequences... this causes the progress bar for each sequence to move to near the end of the sequence.

#### **Parameters**

```
midiclock If true, indicates that the MIDI clock should be used.
```

## 13.51.4.203 clamp\_track()

Fixed the bug we found, where we checked for track > m\_seqs\_in\_set, instead of using the >= operator.

track	The track value to be checked and rectified as necessary.
-------	---

#### Returns

Returns the track parameter, clamped between 0 and m\_seqs\_in\_set-1, inclusive.

It is called 32 times, corresponding to the pattern/sequence slots in the Patterns window. It first removes the given key-code from the regular and reverse slot-maps. Then it removes the sequence-slot from the regular and reverse slot-maps. Finally, it adds the sequence-slot with a key value of key-code, and adds the key-code with a value of sequence-slot.

## Parameters

keycode	The keycode for which to set the sequence slot.
sequence_slot	The sequence slot to be set.

## 13.51.4.207 set\_key\_group()

```
void seq64::perform::set_key_group (
          unsigned int keycode,
          long group_slot ) [inline], [private]
```

It is called 32 times, corresponding the pattern/sequence slots in the Patterns window. Compare it to the set\_key ← \_events() function.

keycode	The keycode for which to set the group slot.
group_slot	The group slot to be set.

## 13.51.5 Friends And Related Function Documentation

```
13.51.5.1 jack_assistant
friend class jack_assistant [friend]
13.51.5.2 keybindentry
friend class keybindentry [friend]
13.51.5.3 mainwnd
friend class mainwnd [friend]
13.51.5.4 midifile
friend class midifile [friend]
13.51.5.5 optionsfile
friend class optionsfile [friend]
13.51.5.6 options
friend class options [friend]
13.51.5.7 perfedit
friend class perfedit [friend]
13.51.5.8 perfroll
friend class perfroll [friend]
13.51.5.9 input_thread_func
void* input_thread_func (
             void * myperf ) [friend]
```

myperf	Provides the perform object instance that is to be used. Its output_func() is called. Currently, this
	parameter is not validated, for speed.

#### Returns

Always returns nullptr.

## 13.51.5.10 output\_thread\_func

Set up the performance, set the process to realtime privileges, and then start the output function.

#### **Parameters**

myperf	Provides the perform object instance that is to be used. Its output_func() is called. Currently, this
	parameter is not validated, for speed.

#### Returns

Always returns nullptr.

## 13.51.5.11 jack\_sync\_callback

This JACK synchronization callback informs the specified perform object of the current state and parameters of JACK.

The transport state will be:

- JackTransportStopped when a new position is requested.
- JackTransportStarting when the transport is waiting to start.
- JackTransportRolling when the timeout has expired, and the position is now a moving target.

This is the slow-sync callback, which the stazed code replaces with jack\_process\_callback().

state	The JACK Transport state.
pos	The JACK position value.
arg	The pointer to the jack_assistant object. Currently not checked for nullity, nor dynamic-casted.

#### Returns

Returns 1 if the function works, and 0 if something was wrong.

## 13.51.5.12 jack\_process\_callback

```
int jack_process_callback (
          jack_nframes_t nframes,
          void * arg ) [friend]
```

#### 13.51.5.13 jack\_shutdown

#### 13.51.5.14 jack\_timebase\_callback

```
void jack_timebase_callback (
         jack_transport_state_t state,
         jack_nframes_t nframes,
         jack_position_t * pos,
         int new_pos,
         void * arg ) [friend]
```

The original version of the function worked properly with Hydrogen, but not with Klick. The new code seems to work with both. More testing and clarification is needed. This new code was "discovered" in the source-code for the "SooperLooper" project:

```
http://essej.net/sooperlooper/
```

The first difference with the new code is that it handles the case where the JACK position is moved (new\_pos == true). If this is true, and the JackPositionBBT bit is off in pos->valid, then the new BBT value is set.

The seconds set of differences are in the "else" clause. In the new code, it is very simple: calculate the new tick value, back it off by the number of ticks in a beat, and perhaps go to the first beat of the next bar.

In the old code (complex!), the simple BBT adjustment is always made. This changes (perhaps) the beats\_per\_bar, beat\_type, etc. We need to make these settings use the actual global values for beats set for Sequencer64. Then, if transitioning from JackTransportStarting to JackTransportRolling (instead of checking new\_pos!), the BBT values (bar, beat, and tick) are finally adjusted. Here are the steps, with old and new steps noted:

```
-# Calculate the "delta" ticks based on the current frame, the
    ticks_per_beat, the beats_per_minute, and the frame_rate. The old
    code saves this in a local, the new code assigns it to pos->tick.
-# Old code: save this delta as a positive value.
-# Figure out the settings and modify bar, beat, tick, and
    bar_start_tick. The old and new code seem to have the same intent,
    but it seems like the new code is faster and also correct.
- Old code: Calculations are made by division and mod
        operations.
- New code: Calculations are made by increments and decrements
    in a while loop.
```

## Stazed:

The call to jack\_timebase\_callback() to supply JACK with BBT, etc. would occasionally fail when the pos information had zero or some garbage in the pos.frame\_rate variable. This would occur when there was a rapid change of frame position by another client... i.e. qjackctl. From the JACK API:

pos address of the position structure for the next cycle; pos->frame will be its frame number. If new\_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase\_callback's task is to update the extended information here."

The "If TRUE" line seems to be the issue. It seems that qjackctl does not always set pos.frame\_rate so we get garbage and some strange BBT calculations that display in qjackctl. So we need to set it here and just use m\_jack\_frame\_rate for calculations instead of pos.frame\_rate.

#### **Parameters**

state	Indicates the current state of JACK transport.	
nframes	The number of JACK frames in the current time period.	
pos	Provides the position structure to be filled in, the address of the position structure for the next cycle; pos->frame will be its frame number. If new_pos is FALSE, this structure contains extended position information from the current cycle. If TRUE, it contains whatever was set by the requester. The timebase_callback's task is to update the extended information here.	
new_pos	TRUE (non-zero) for a newly requested pos, or for the first cycle after the timebase_callback is defined. This is usually 0 in Sequencer64 at present, and 1 if one, say, presses "rewind" in qjackctl.	
arg	Provides the jack_assistant pointer, currently unchecked for nullity.	

### 13.51.5.15 get\_current\_jack\_position

#### 13.51.6 Field Documentation

## 13.51.6.1 sm\_mc\_dummy

```
midi_control seq64::perform::sm_mc_dummy [static], [private]
```

Instantiate the dummy midi control object, which is used in lieu of a null pointer.

We're taking code that basically works already, in the sense that it never seems to access a null pointer. So we're not even risking data transfers between this dummy object and the ones we really want to use.

However, it would be nice to be able to detect any errors that occur. How?

#### 13.51.6.2 m\_song\_start\_mode

```
bool seq64::perform::m_song_start_mode [private]
```

This is a replacement for the global setting, but is essentially a global setting itself, and is saved to and restored from the "rc" configuration file. Sometimes called "JACK start mode", it used to be a JACK setting, but now applies to any playback. Do not confuse this setting with m\_playback\_mode, which has a similar meaning but is more transitory. Probably, the concept needs some clean-up.

#### 13.51.6.3 m\_start\_from\_perfedit

```
bool seq64::perform::m_start_from_perfedit [private]
```

#### 13.51.6.4 m\_reposition

```
bool seq64::perform::m_reposition [private]
```

#### 13.51.6.5 m\_excell\_FF\_RW

```
float seq64::perform::m_excell_FF_RW [private]
```

It starts out at 1.0, and can range up to 60.0, being multiplied by 1.1 by the FF/RW timeout function.

## 13.51.6.6 m\_FF\_RW\_button\_type

```
ff_rw_button_t seq64::perform::m_FF_RW_button_type [private]
```

It has values of FF\_RW\_REWIND, FF\_RW\_NONE, or FF\_RW\_FORWARD. This was a free (global in a namespace) int in perfedit.

## 13.51.6.7 m\_gui\_support

```
gui_assistant& seq64::perform::m_gui_support [private]
```

### 13.51.6.8 m\_mute\_group

```
bool seq64::perform::m_mute_group[c_max_sequence] [private]
```

This value determines whether a particular track will be muted or unmuted, and it can handle all tracks available in the application (currently c\_max\_sets \* c\_seqs\_in\_set, i.e. 1024). Note that the current state of playing can be "learned", and stored herein as the desired state for the track.

## 13.51.6.9 m\_armed\_saved

```
bool seq64::perform::m_armed_saved [private]
```

#### 13.51.6.10 m\_armed\_statuses

#### 13.51.6.11 m\_tracks\_mute\_state

```
bool seq64::perform::m_tracks_mute_state[c_seqs_in_set] [private]
```

Unlike the m\_mute\_group[] array, this holds the current state, rather than the state desired by activating a mute group, and it applies to only one screen-set.

#### 13.51.6.12 m\_mode\_group

```
bool seq64::perform::m_mode_group [private]
```

This value starts out true. It is altered by the c\_midi\_control\_mod\_gmute handler or when the keys().group\_off() or the keys().group\_on() keys are struck.

#### 13.51.6.13 m\_mode\_group\_learn

```
bool seq64::perform::m_mode_group_learn [private]
```

#### 13.51.6.14 m\_mute\_group\_selected

```
int seq64::perform::m_mute_group_selected [private]
```

It seems like a "group" is essentially a "set" that is selected for the saving and restoring of the status of all patterns in that set.

## 13.51.6.15 m\_playing\_screen

```
int seq64::perform::m_playing_screen [private]
```

In seq24, this value is altered by set\_playing\_screenset(), which is called by handle\_midi\_control(c\_midi\_control ← \_play\_ss, state).

## 13.51.6.16 m\_playscreen\_offset

```
int seq64::perform::m_playscreen_offset [private]
```

Saves some multiplications, should make the code easier to grok, and centralizes the use of c\_seqs\_in\_set, which we want to be able to change at run-time, as a future enhancement.

## 13.51.6.17 m\_seqs

```
sequence* seq64::perform::m_seqs[c_max_sequence] [private]
```

**Todo** First, make the sequence array a vector, and second, put allof these flags into a structure and access those members indirectly.

```
13.51.6.18 m_seqs_active
```

```
bool seq64::perform::m_seqs_active[c_max_sequence] [private]
```

This array can have "holes" with inactive sequences, so every sequence needs to be checked before using it.

```
13.51.6.19 m_was_active_main
```

```
bool seq64::perform::m_was_active_main[c_max_sequence] [private]
```

This value seems to be used only in maintaining dirtiness-status; did some process modify the sequence? Was it's mute/unmute status changed?

```
13.51.6.20 m_was_active_edit
```

```
bool seq64::perform::m_was_active_edit[c_max_sequence] [private]
```

This value seems to be used only in maintaining dirtiness-status for editing the mute/unmute status during pattern editing.

```
13.51.6.21 m_was_active_perf
```

```
bool seq64::perform::m_was_active_perf[c_max_sequence] [private]
```

This value seems to be used only in maintaining dirtiness-status for editing the mute/unmute status during performance/song editing.

```
13.51.6.22 m_was_active_names
```

```
bool seq64::perform::m_was_active_names[c_max_sequence] [private]
```

This value seems to be used only in maintaining dirtiness-status for editing the mute/unmute status during performance names editing. Not sure that it serves a real purpose; perhaps created with an eye to editing the pattern name in the song editor?

```
13.51.6.23 m_sequence_state
```

```
bool seq64::perform::m_sequence_state[c_max_sequence] [private]
```

## 13.51.6.24 m\_master\_bus

```
mastermidibus seq64::perform::m_master_bus [private]
```

### 13.51.6.25 m\_transpose

```
int seq64::perform::m_transpose [private]
```

```
13.51.6.26 m_out_thread
pthread_t seq64::perform::m_out_thread [private]
Provides a "handle" to the output thread.
13.51.6.27 m_in_thread
pthread_t seq64::perform::m_in_thread [private]
13.51.6.28 m_out_thread_launched
bool seq64::perform::m_out_thread_launched [private]
13.51.6.29 m_in_thread_launched
bool seq64::perform::m_in_thread_launched [private]
13.51.6.30 m_running
bool seq64::perform::m_running [private]
However, this flag is conflated with some JACK support, and we have to supplement it with another flag, m_←
pattern_playing.
13.51.6.31 m_is_pattern_playing
bool seq64::perform::m_is_pattern_playing [private]
It replaces rc_settings :: is_pattern_playing(), which is gone, since the perform object is now visible to all classes
that care about it.
13.51.6.32 m_inputing
bool seq64::perform::m_inputing [private]
13.51.6.33 m_outputing
bool seq64::perform::m_outputing [private]
13.51.6.34 m_looping
```

If true, the performance will loop between the L and R markers in the performance editor.

bool seq64::perform::m\_looping [private]

```
13.51.6.35 m_playback_mode
```

```
bool seq64::perform::m_playback_mode [private]
```

There are two, "live" and "song", indicated by the following values:

```
13.51.6.36 m_ppqn
```

```
int seq64::perform::m_ppqn [private]
```

13.51.6.37 m\_beats\_per\_bar

```
int seq64::perform::m_beats_per_bar [private]
```

The default value is SEQ64\_DEFAULT\_BEATS\_PER\_MEASURE (4).

13.51.6.38 m beat width

```
int seq64::perform::m_beat_width [private]
```

The default value is SEQ64\_DEFAULT\_BEAT\_WIDTH (4).

13.51.6.39 m\_clocks\_per\_metronome

```
int seq64::perform::m_clocks_per_metronome [private]
```

This value provides the number of MIDI clocks between metronome clicks. The default value of this item is 24. It can also be read from some SMF 1 files, such as our hymne.mid example.

13.51.6.40 m\_32nds\_per\_quarter

```
int seq64::perform::m_32nds_per_quarter [private]
```

Useful in export. A duplicate of the same member in the sequence class.

13.51.6.41 m\_us\_per\_quarter\_note

```
long seq64::perform::m_us_per_quarter_note [private]
```

Useful in export. A duplicate of the same member in the sequence class.

```
13.51.6.42 m_one_measure
```

```
midipulse seq64::perform::m_one_measure [private]
```

We can save some multiplications, and, more importantly, later define a more flexible definition of "one measure's worth" than simply four quarter notes.

```
13.51.6.43 m_left_tick
```

```
midipulse seq64::perform::m_left_tick [private]
```

Note that "tick" is actually "pulses".

```
13.51.6.44 m_right_tick
```

```
midipulse seq64::perform::m_right_tick [private]
```

Note that "tick" is actually "pulses".

13.51.6.45 m\_starting\_tick

```
midipulse seq64::perform::m_starting_tick [private]
```

By default, this value is always reset to the value of the "left tick". We want to eventually be able to leave it at the last playing tick, to support a "pause" functionality. Note that "tick" is actually "pulses".

```
13.51.6.46 m_tick
```

```
midipulse seq64::perform::m_tick [mutable], [private]
```

The m\_tick member holds the tick to be used in displaying the progress bars and the maintime pill. It is mutable because sometimes we want to adjust it in a const function for pause functionality.

```
13.51.6.47 m_jack_tick
```

```
midipulse seq64::perform::m_jack_tick [private]
```

13.51.6.48 m\_usemidiclock

```
bool seq64::perform::m_usemidiclock [private]
```

13.51.6.49 m\_midiclockrunning

```
bool seq64::perform::m_midiclockrunning [private]
```

```
13.51.6.50 m_midiclocktick
int seq64::perform::m_midiclocktick [private]
13.51.6.51 m_midiclockpos
int seq64::perform::m_midiclockpos [private]
13.51.6.52 m_dont_reset_ticks
bool seq64::perform::m_dont_reset_ticks [private]
All this member is used for is keeping the last tick from being reset.
13.51.6.53 m_screen_set_notepad
std::string seq64::perform::m_screen_set_notepad[c_max_sets] [private]
13.51.6.54 m_midi_cc_toggle
midi_control seq64::perform::m_midi_cc_toggle[c_midi_controls] [private]
13.51.6.55 m midi cc on
midi_control seq64::perform::m_midi_cc_on[c_midi_controls] [private]
13.51.6.56 m_midi_cc_off
midi_control seq64::perform::m_midi_cc_off[c_midi_controls] [private]
13.51.6.57 m_offset
int seq64::perform::m_offset [private]
It is used in the MIDI control of the playback status of the sequences in the current screen-set. It is also used to
```

It is used in the MIDI control of the playback status of the sequences in the current screen-set. It is also used to offset the sequence numbers so that the control (mute/unmute) keys can be shown on any screen-set.

```
13.51.6.58 m_control_status
int seq64::perform::m_control_status [private]
```

Need to learn more about this one. It is used in the replace, snapshot, and queue functionality.

#### 13.51.6.59 m\_screenset

```
int seq64::perform::m_screenset [private]
```

This is merely the screen-set that is in view. The fix of tdeagan substitutes the "in-view" screen-set for the "playing" screen-set.

### 13.51.6.60 m\_seqs\_in\_set

```
int seq64::perform::m_seqs_in_set [private]
```

This change will require some arrays to be dynamically allocated (vectors).

#### 13.51.6.61 m\_max\_sets

```
int seq64::perform::m_max_sets [private]
```

Again, currently set to the old value, which is used in hard-wired array sizes. To make it variable will require a move from arrays to vectors.

#### 13.51.6.62 m\_sequence\_count

```
int seq64::perform::m_sequence_count [private]
```

Used by the install\_sequence() function. Note that this value is not a suitable replacement for c\_max\_sequence/m← \_sequence\_max, because there can be inactive sequences amidst the active sequences.

#### 13.51.6.63 m\_sequence\_max

```
int seq64::perform::m_sequence_max [private]
```

However, this value is already 32 \* 32 = 1024, and is probably enough for any usage. Famous last words?

## 13.51.6.64 m\_edit\_sequence

```
int seq64::perform::m_edit_sequence [private]
```

Moving this status from seqmenu into perform for better centralized management.

### 13.51.6.65 m\_is\_modified

```
bool seq64::perform::m_is_modified [private]
```

All the GUIs seem to use a perform object.

```
13.51.6.66 m_condition_var
```

```
condition_var seq64::perform::m_condition_var [private]
```

It is signalled if playback has been started. The output thread function waits on this variable until m\_running and m\_outputing are false. This variable is also signalled in the perform destructor.

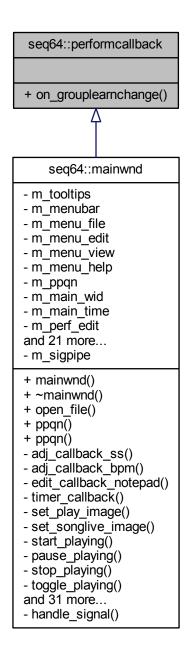

```
13.51.6.67 m_jack_asst
jack_assistant seq64::perform::m_jack_asst [private]
It implements most of the JACK stuff.
13.51.6.68 m_have_undo
bool seq64::perform::m_have_undo [private]
13.51.6.69 m_undo_vect
std::vector<int> seq64::perform::m_undo_vect [private]
13.51.6.70 m_have_redo
bool seq64::perform::m_have_redo [private]
13.51.6.71 m_redo_vect
std::vector<int> seq64::perform::m_redo_vect [private]
13.51.6.72 m_notify
```

std::vector<performcallback \*> seq64::perform::m\_notify [private]

# 13.52 seq64::performcallback Struct Reference

Provides for notification of events.

Inheritance diagram for seq64::performcallback:

## **Public Member Functions**

virtual void on\_grouplearnchange (bool)

A do-nothing callback.

13.52.1	Detailed D	<b>Description</b>
---------	------------	--------------------

Provide a response to a group-learn change event.

## 13.52.2 Member Function Documentation

## 13.52.2.1 on\_grouplearnchange()

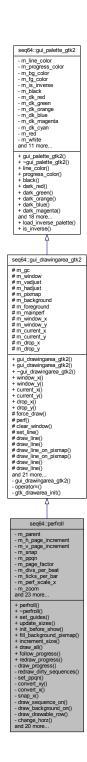

"state" is an Unused parameter.

Reimplemented in seq64::mainwnd.

# 13.53 seq64::perfroll Class Reference

This class implements the performance roll user interface.

Inheritance diagram for seq64::perfroll:

## **Public Member Functions**

• perfroll (perform &perf, perfedit &parent, Gtk::Adjustment &hadjust, Gtk::Adjustment &vadjust, int ppqn=S← EQ64\_USE\_DEFAULT\_PPQN)

Principal constructor.

virtual ∼perfroll ()

This destructor deletes the interaction object.

void set\_guides (int snap, int measure, int beat)

This function sets the m\_snap, m\_measure\_length, and m\_beat\_length members directly from the function parameters, which are in units of pulses (sometimes misleadingly called "ticks".)

· void update sizes ()

Updates the sizes of various items.

void init\_before\_show ()

Sets the roll-lengths ticks member.

void fill\_background\_pixmap ()

This function updates the background of the piano roll.

void increment\_size ()

Increments the value of m\_roll\_length\_ticks by the PPQN \* 512, then calls update\_sizes().

• void draw all ()

Provides a very common sequence of calls used in perfroll\_input.

- void follow\_progress ()
- void redraw\_progress ()

Helper function to simplify the client call.

#### **Private Member Functions**

void draw\_progress ()

Draws the progress line that shows where we are in the performance.

void redraw\_dirty\_sequences ()

Redraws patterns/sequences that have been modified.

void set\_ppqn (int ppqn)

Handles changes to the PPQN value in one place.

void convert\_xy (int x, int y, midipulse &ticks, int &seq)

Converts (x, y) coordinates on the piano roll to tick (pulse) and sequence numbers.

void convert\_x (int x, midipulse &ticks)

Converts an x-coordinate to a tick-offset on the x axis.

void snap x (int &x)

This function performs a 'snap' action on x.

void draw\_sequence\_on (int seqnum)

Draws the given pattern/sequence on the given drawable area.

void draw\_background\_on (int seqnum)

Draws the given pattern/sequence background on the given drawable area.

void draw\_drawable\_row (long y)

Not quite sure what this draws yet.

• void change horz ()

Changes the 4-bar horizontal offset member and queues up a draw operation.

void change\_vert ()

Changes the vertical offset member and queues up a draw operation.

void split\_trigger (int sequence, midipulse tick)

Splits a trigger, whatever that means.

void enqueue\_draw ()

Wraps queue\_draw() and forwards the call to the parent perfedit, so that it can forward it to any other perfedit that exists.

• void set\_zoom (int z)

Implements the horizontal zoom feature.

void convert\_drop\_xy ()

A convenience function.

void horizontal\_adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

· void vertical adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

void horizontal\_set (double value)

Sets the exact position of a horizontal scroll-bar.

· void vertical\_set (double value)

Sets the exact position of a vertical scroll-bar.

• void on\_realize ()

Provides the on-realization callback.

bool on expose event (GdkEventExpose \*ev)

Handles the on-expose event.

bool on\_button\_press\_event (GdkEventButton \*ev)

This callback function handles a button press by forwarding it to the interaction object's button-press function.

bool on button release event (GdkEventButton \*ev)

This callback function handles a button release by forwarding it to the interaction object's button-release function.

bool on\_motion\_notify\_event (GdkEventMotion \*ev)

Handles motion notification by forwarding it to the interaction object's motion-notification callback function.

bool on scroll event (GdkEventScroll \*ev)

Handles horizontal and vertical scrolling.

bool on\_focus\_in\_event (GdkEventFocus \*ev)

This callback handles an in-focus event by setting the flag to HAS\_FOCUS.

bool on\_focus\_out\_event (GdkEventFocus \*ev)

This callback handles an out-of-focus event by resetting the flag HAS\_FOCUS.

• void on\_size\_allocate (Gtk::Allocation &al)

Upon a size allocation event, this callback calls the base-class version of this function, then sets m\_window\_x and m\_window\_y, and calls update\_sizes().

bool on\_key\_press\_event (GdkEventKey \*ev)

This callback function handles a key-press event.

void on size request (GtkRequisition \*)

This do-nothing callback effectively throws away a size request.

## **Private Attributes**

· perfedit & m parent

Provides a link to the perfedit that created this object.

· int m\_h\_page\_increment

Provides the horizontal page increment for the horizontal scrollbar.

int m\_v\_page\_increment

Provides the vertical page increment for the vertical scrollbar.

• int m\_snap

The amount of horizontal snap.

• int m\_ppqn

Parts-per-quarter-note value.

int m\_page\_factor

4096, horizonal page sizing.

· int m divs per beat

Holds current tick scaling value.

· midipulse m ticks per bar

Holds current bar scaling value.

· int m\_perf\_scale\_x

Scaling based on zoom and PPQN.

• int m zoom

New value to attempt a rudimentary time-zoom feature.

int m\_names\_y

The maximum height of the perfroll names box, in pixes.

int m background x

The width of the perfroll background.

· int m\_size\_box\_w

This is a basically constant value set to  $s_perfroll_size_box_w = 3$ .

· int m measure length

The legnth of a measure, in beat units.

· int m\_beat\_length

The length of a beat, in parts-per-quarter note.

· midipulse m old progress ticks

Saves the position of the progress bar, for erasing it in preparation for drawing it at the next tick value.

· bool m have button press

Used in the fruity and seq24 perfroll input classes to help with trigger push/pop management.

· bool m transport follow

Indicates that the application should follow JACK transport.

· bool m trans button press

Indicates if the follow-transport button is pressed.

· midipulse m 4bar offset

Holds the horizontal offset related to the horizontal scroll-bar position.

int m\_sequence\_offset

This value is the vertical version of m\_4bar\_offset.

int m\_roll\_length\_ticks

Provides the width of the piano roll in ticks.

• midipulse m\_drop\_tick

The horizontal location for section movement.

midipulse m\_drop\_tick\_trigger\_offset

The horizontal trigger location for section movement.

int m\_drop\_sequence

Holds the currently-selected sequence being moved.

· int m sequence max

Currently, just a class-specific version of c\_max\_sequence, meant for the future.

• bool m\_sequence\_active [c\_max\_sequence]

Used when drawing an active sequence.

• FruityPerfInput m\_fruity\_interaction

We need both styles of interaction object present.

• Seq24PerfInput m\_seq24\_interaction

Provides support for standard Seq24 mouse handling, plus the keystroke handlers.

• AbstractPerfInput & m\_interaction

Provides a reference to the selected (at startup time) method of mouse interaction.

bool m\_moving

Used in the Seq24 or Fruity processing when moving a section of triggers.

• bool m\_growing

Used in the Seq24 or Fruity processing when growing a section of triggers.

bool m\_grow\_direction

Used in the Seq24 or Fruity processing when growing a section of triggers.

#### **Friends**

class FruityPerfInput

These friend implement interaction-specific behavior, although only the Seq24 interactions support full keyboard processing, except for some common functionality provided by perform::perfroll\_key\_event().

- class Seq24PerfInput
- · class perfedit

#### **Additional Inherited Members**

#### 13.53.1 Constructor & Destructor Documentation

## 13.53.1.1 perfroll()

Well, now there are two objects, so no explicit deletion necessary.

### 13.53.2 Member Function Documentation

### 13.53.2.1 set\_guides()

This function then fills in the background, and queues up a draw operation.

## **Parameters**

snap	Provides the number of snap-pulses (pulses per snap interval) as calculated in <pre>perfedit::set_guides()</pre> . This is actually equal to the measure-pulses divided by the snap value in perfedit; the snap value defaults to 8.	
measure	Provides the number of measure-pulses (pulses per measure) as calculated in perfedit::set_guides().	
beat	Provides the number of beat-pulses (pulses per beat) as calculated in perfedit::set_guides().	

#### 13.53.2.2 update\_sizes()

```
void seq64::perfroll::update_sizes ( )
```

#### Note

Trying to figure out what the 16 is. So take the "bars-visible" calculation, the c\_perf\_scale\_x value, assume that "ticks" is another name for "pulses", and assume that "beats" is a quarter note. Ignoring the numbers, the units come out to:

```
pixels * ticks / pixel
bars = -----
ticks / beat * beats / bar
```

Thus, the 16 is a "beats per bar" or "beats per measure" value. This doesn't quite make sense, but there are 16 divisions per beat on the perfroll user-interface. So for now we'll call it the latter, and make a variable called "m\_divs\_per\_beat", see its definition in the class initializer list.

#### 13.53.2.3 init\_before\_show()

```
void seq64::perfroll::init_before_show ( )
```

First, it gets the largest trigger value among the active sequences. Then it truncates this value to the nearest PPQN \* 16 ticks. Then it adds PPQN \* 4096 ticks.

## 13.53.2.4 fill\_background\_pixmap()

```
void seq64::perfroll::fill_background_pixmap ( )
```

The first thing done is to clear the background by painting it with a filled white rectangle.

This function is called whenever something occurs (e.g. zoom) that can affect how the piano roll is drawn.

### 13.53.2.5 increment\_size()

```
void seq64::perfroll::increment_size ( )
13.53.2.6 draw_all()
```

void seq64::perfroll::draw\_all ( )

m\_drop\_y is adjusted by perfroll::change\_vert() for any scroll after it was originally selected. The call below to draw\_drawable\_row() will have the wrong y location and un-select will not occur if the user scrolls the track up or down to a new y location, if not adjusted.

## 13.53.2.7 follow\_progress()

```
void seq64::perfroll::follow_progress ( )
```

```
13.53.2.8 redraw_progress()
void seq64::perfroll::redraw_progress ( ) [inline]

13.53.2.9 draw_progress()
void seq64::perfroll::draw_progress ( ) [private]
```

We would like to be able to leave the line there when the progress is paused while running off of JACK transport. How? The perf().get\_tick() call always returns 0 when stop is in force.

If we comment out the erasure of the old line, we see that the progress bar is also erased when a pattern boundary is hit (triggers), and when the sequence is stopped by the user.

In order to support true pause in the song editor, we tried to replace perform::get\_tick() with perform::get\_start\_tick() and perform::get\_last\_tick() [a new experimental function]. But those replacements here always return 0, even as perform::get\_tick() increases. Now were are trying a newer function, perform::get\_max\_tick(), which seems to do the trick for resuming (instead of rewinding) the progress bar. It's still a tiny bit laggy, so we have to find a faster way to get the maximum. (Note that the draw progress function is called at every timeout, that is, constantly.)

The perform::get\_max\_tick() call doesn't work with JACK: the progress bar rewinds to the beginning when playback is paused, though it does resume where it left off. It also may cause the progress bar to backtrack through any gap. Let's restore the get\_tick() call.

```
13.53.2.10 redraw_dirty_sequences()
void seq64::perfroll::redraw_dirty_sequences ( ) [private]
```

Change Note ca 2016-05-30 Lets try not drawing sequences greater than the maximum, at all.

The m\_ticks\_per\_bar member replaces the global ppqn times 16. This construct is parts-per-quarter-note times 4 quarter notes times 4 sixteenth notes in a bar. (We think...)

The m\_perf\_scale\_x member starts out at c\_perf\_scale\_x, which is 32 ticks per pixel at the default tick rate of 192 PPQN. We adjust this now. But note that this calculation still involves the c\_perf\_scale\_x constant.

**Todo** Resolve the issue of c\_perf\_scale\_x versus m\_perf\_scale\_x in perfroll.

#### 13.53.2.12 convert\_xy()

The results are returned via the d\_tick and d\_seq parameters. The sequence number is clipped to a legal value (0 to m\_sequence\_max).

#### **Parameters**

	X	The x coordinate of the mouse pointer.
	У	The y coordinate of the mouse pointer.
out	d_tick	Holds the calculated tick value.
out	d_seq	Holds the calculated sequence-number value.

## 13.53.2.13 convert\_x()

```
void seq64::perfroll::convert_x (
                int x,
                 midipulse & tick ) [private]
```

The result is returned via the tick parameter. Note that m\_4bar\_offset already includes the m\_ticks\_per\_bar = ppqn \* 16 factor, for speed.

#### **Parameters**

	X	The input x (pixel) value.
out	tick	Holds the result of the calculation.

## 13.53.2.14 snap\_x()

- m\_snap = number pulses to snap to
- m\_perf\_scale\_x = number of pulses per pixel

Therefore  $mod = m\_snap/m\_perf\_scale\_x$  equals the number pixels to snap to.

## 13.53.2.15 draw\_sequence\_on()

Statement nesting from hell!

## 13.53.2.16 draw\_background\_on()

```
13.53.2.17 draw_drawable_row()
```

It is involved in the drawing of a greyed (selected) row.

What's weird is that we divide y by m\_names\_y, then multiply it by m\_names\_y, before passing the result to draw—drawable(). However, if we just use y casted to an int, then the drawing of the row is only partial, vertically.

```
13.53.2.18 change_horz()
```

```
void seq64::perfroll::change_horz ( ) [private]
```

Since the m\_4bar\_offset value is always multiplied by m\_ticks\_per\_bar before usage, let's just do it here and not have to multiply it later.

```
13.53.2.19 change_vert()
```

```
void seq64::perfroll::change_vert ( ) [private]
```

#### Stazed:

```
Must adjust m_drop_y or perfroll_input's unselect_triggers() will not work if scrolled up or down to a new location. See the note in on_button_press_event() in the perfroll_input module. Also see the note in the draw_all() function.
```

#### 13.53.2.20 split\_trigger()

## 13.53.2.21 enqueue\_draw()

```
void seq64::perfroll::enqueue_draw ( ) [private]
```

The parent perfedit will call perfroll::queue\_draw() on behalf of this object, and it will pass a perfroll::enqueue\_draw() to the peer perfedit's perfroll, if the peer exists.

### 13.53.2.22 set\_zoom()

Change Note ca 2016-04-05 The initial zoom value is c\_perf\_scale\_x (32). We allow it to range from 1 to 128, for now. Smaller values zoom in.

```
13.53.2.23 convert_drop_xy()
void seq64::perfroll::convert_drop_xy ( ) [inline], [private]
```

13.53.2.24 horizontal\_adjust()

A duplicate of the one in seqroll.

#### **Parameters**

step

Provides the step value to use for adjusting the horizontal scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_hadjust">gui\_drawingarea\_gtk2::scroll\_hadjust()</a> for more information.

#### 13.53.2.25 vertical\_adjust()

A near-duplicate of the one in seqroll.

#### **Parameters**

step

Provides the step value to use for adjusting the vertical scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_vadjust">gui\_drawingarea\_gtk2::scroll\_vadjust()</a> for more information.

#### 13.53.2.26 horizontal\_set()

### **Parameters**

value

The desired position. Mostly this is either 0.0 or 9999999.0 (an "infinite" value to select the start or end position.

# 13.53.2.27 vertical\_set()

## **Parameters**

value

The desired position. Mostly this is either 0.0 or 9999999.0 (an "infinite" value to select the start or end position.

#### 13.53.2.28 on\_realize()

```
void seq64::perfroll::on_realize ( ) [private]
```

Calls the base-class version first.

Then it allocates the additional resources need, that couldn't be initialized in the constructor, and makes some connections.

## Stazed:

This creation of m\_background needs to be set to the max width for proper drawing of zoomed measures or they will get truncated with high beats per measure and low beat width. Since this is a constant size, it cannot be adjusted later for zoom. The constant c\_perfroll\_background\_x is set to the max amount by default for use here. The drawing functions fill\_background\_pixmap() and draw\_background\_on() which use c\_perfroll\_background\_x also, could be adjusted by zoom with a substituted variable. Not sure if there is any benefit to doing the adjustment... Perhaps a small benefit in speed? Maybe FIXME if really, really bored...

#### 13.53.2.29 on\_expose\_event()

```
bool seq64::perfroll::on_expose_event (
        GdkEventExpose * ev ) [private]
```

Draws a vertical page of the performance editor. The part drawn starts at m\_sequence\_offset and continues until the last sequence that can be at least partially seen given the height of the window.

If we're at the bottom of the sequences (1024, a non-existent sequence) would be the last sequence shown, we don't bother drawing it. This prevents debug messages about an illegal sequence, and can show a black bottom row that is a clear sign we're at the end of the legal sequences.

#### **Parameters**

```
ev Provides the expose event.
```

#### Returns

Always returns true.

## 13.53.2.30 on\_button\_press\_event()

```
bool seq64::perfroll::on_button_press_event ( {\tt GdkEventButton} \ *\ ev\ ) \quad [{\tt private}]
```

This gives us Seq24 versus Fruity behavior.

One minor issue: Fruity behavior doesn't yet provide the keystroke behavior we now handle for the Seq24 mode of operation.

## 13.53.2.31 on\_button\_release\_event()

This gives us Seq24 versus Fruity behavior.

#### 13.53.2.32 on\_motion\_notify\_event()

### 13.53.2.33 on\_scroll\_event()

If the Shift key is held while scrolling, then the scrolling is horizontal, otherwise it is vertical. This matches the convention of the seqedit class.

Note that, unlike the sequest class, Ctrl-Scroll is not used to modify the zoom value. Rather than mess up legacy behavior, we will rely on keystrokes (z, 0, Z, and Ctrl-Page-Up and Ctrl-Page-Down) to implement this zoom.

#### **Parameters**

```
ev Provides the scroll event.
```

#### Returns

Currently always returns true.

```
13.53.2.34 on_focus_in_event()
```

If we don't check the event type first, then the ev->keyval value is something weird like 65507. Note that we pass the functionality on to the perform::perfroll\_key\_event() function for the handling of delete, cut, copy, paste, and undo operations. If the keystroke is not handled by that function, then we handle it here.

Note that only the Seq24 input interaction object handles additional keystrokes not handled by the perfroll\_key\_ event() function.

The perfroll key event() call handles Del, Ctrl-X, Ctrl-C, Ctrl-V, and Ctrl-Z (which does nothing at present).

We've also added support for moving up and down in the piano roll (Up and Down arrows), paging up and down (Page-Up and Page-Down keys), paging left and right (Shift Page-Up and Page-Down), paging to top and bottom (Home and End), and paging to start and end (Shift Home and End).

The Keypad-End key is an issue on our ASUS "gaming" laptop. Whether it is seen as a "1" or an "End" key depends on an interaction between the Shift and the Num Lock key. Annoying, takes some time to get used to.

Stazed: there are many changes from seq32 that need to be studied before including them here. Note that, even though we filter out the Ctrl key here, it still works for Ctrl-X (cut) and Ctrl-V (paste). For undo, the Undo button can be used, Ctrl-Z never worked in this view anyway.

### Warning

We see that 'x' and 'z' are already handled in perfroll\_key\_event() if the Ctrl key was pressed. Be careful.

#### 13.53.2.38 on\_size\_request()

#### 13.53.3 Friends And Related Function Documentation

#### 13.53.3.1 FruityPerfInput

```
friend class FruityPerfInput [friend]
```

The perfedit class needs access to the private enqueue\_draw() function.

#### 13.53.3.2 Seq24PerfInput

```
friend class Seq24PerfInput [friend]
```

#### 13.53.3.3 perfedit

```
friend class perfedit [friend]
```

## 13.53.4 Field Documentation

### 13.53.4.1 m\_parent

```
perfedit& seq64::perfroll::m_parent [private]
```

We want to support two perfedit windows, but the children of perfedit will have to communicate changes requiring a redraw through the parent.

## 13.53.4.2 m\_h\_page\_increment

```
int seq64::perfroll::m_h_page_increment [private]
```

It was set to 1, the same as the step increment. That is too little. This value will be set to 4, for now. Might be a useful "user" configuration option.

## 13.53.4.3 m\_v\_page\_increment

```
int seq64::perfroll::m_v_page_increment [private]
```

It was set to 1, the same as the step increment. That is too little. This value will be set to 8, for now. Might be a useful "user" configuration option.

```
13.53.4.4 m_snap
int seq64::perfroll::m_snap [private]
13.53.4.5 m_ppqn
int seq64::perfroll::m_ppqn [private]
13.53.4.6 m_page_factor
int seq64::perfroll::m_page_factor [private]
13.53.4.7 m_divs_per_beat
int seq64::perfroll::m_divs_per_beat [private]
13.53.4.8 m_ticks_per_bar
midipulse seq64::perfroll::m_ticks_per_bar [private]
13.53.4.9 m_perf_scale_x
int seq64::perfroll::m_perf_scale_x [private]
13.53.4.10 m_zoom
int seq64::perfroll::m_zoom [private]
It seems to work pretty well now.
13.53.4.11 m_names_y
int seq64::perfroll::m_names_y [private]
This is currently semantically a constant set to c_names_y = 24.
13.53.4.12 m_background_x
int seq64::perfroll::m_background_x [private]
This is based on the m_ppqn value and the value of c_perf_scale_x (or is m_perf_scale_x preferable?)
```

```
13.53.4.13 m_size_box_w
```

13.53.4.14 m\_measure\_length

```
int seq64::perfroll::m_size_box_w [private]
```

It is used in drawing the short lines of the small box that sits at the top-left and bottom-right corners of each segment in the pattern editor. These can be used to lengthen and shorten a section in the song editor. We will increase this size, perhaps double it, to make it easier to grab.

```
int seq64::perfroll::m_measure_length [private]
13.53.4.15 m_beat_length
int seq64::perfroll::m_beat_length [private]
13.53.4.16 m_old_progress_ticks
midipulse seq64::perfroll::m_old_progress_ticks [private]
See the <a href="mailto:draw_progress">draw_progress</a>() function. This could almost be static inside that function.
13.53.4.17 m_have_button_press
bool seq64::perfroll::m_have_button_press [private]
13.53.4.18 m_transport_follow
bool seq64::perfroll::m_transport_follow [private]
The alternative is ...?
13.53.4.19 m_trans_button_press
bool seq64::perfroll::m_trans_button_press [private]
13.53.4.20 m_4bar_offset
```

midipulse seq64::perfroll::m\_4bar\_offset [private]

Used in drawing the progress bar and the sequence events. Also used in convert\_x() and convert\_xy(). This used to be the offset in units of bar ticks, but now we use it as a full-fledged ticks value. See the change\_horz() function.

```
13.53.4.21 m_sequence_offset
```

```
int seq64::perfroll::m_sequence_offset [private]
```

It is obtained or changed when the vertical scroll-bar moves. It is used for drawing the correct vertical window in the piano roll.

```
13.53.4.22 m_roll_length_ticks
```

```
int seq64::perfroll::m_roll_length_ticks [private]
```

Calculated in init\_before\_show() based on the maximum trigger found in the perform object, the ticks/bar, the  $P \leftarrow PQN$ , and the page factor. Also can be increased in size in the increment\_size() function [tied to the Grow button]. Used in update\_sizes().

```
13.53.4.23 m_drop_tick
```

```
midipulse seq64::perfroll::m_drop_tick [private]
```

Used only by the friend modules perfroll\_input and fruityperfroll\_input.

```
13.53.4.24 m_drop_tick_trigger_offset
```

```
midipulse seq64::perfroll::m_drop_tick_trigger_offset [private]
```

Used only by the friend modules perfroll\_input and fruityperfroll\_input.

```
13.53.4.25 m_drop_sequence
```

```
int seq64::perfroll::m_drop_sequence [private]
```

Used for redrawing the sequence.

```
13.53.4.26 m_sequence_max
```

```
int seq64::perfroll::m_sequence_max [private]
```

#### 13.53.4.27 m\_sequence\_active

```
bool seq64::perfroll::m_sequence_active[c_max_sequence] [private]
```

Not sure yet why we can't just use the sequence's member function to access this status boolean.

```
13.53.4.28 m_fruity_interaction
```

```
FruityPerfInput seq64::perfroll::m_fruity_interaction [private]
```

Even if the user specifies the fruity interaction, the Seq24 interaction is still needed to handle our new keystroke support for the perfroll. We need both objects to exist all the time, similar to the Fruity/Seq24 roles in the seqroll object.

Obsolete AbstractPerfInput \* m\_interaction

```
13.53.4.29 m_seq24_interaction
```

```
Seq24PerfInput seq64::perfroll::m_seq24_interaction [private]
```

13.53.4.30 m\_interaction

```
AbstractPerfInput& seq64::perfroll::m_interaction [private]
```

## 13.53.4.31 m\_moving

```
bool seq64::perfroll::m_moving [private]
```

## 13.53.4.32 m\_growing

```
bool seq64::perfroll::m_growing [private]
```

#### 13.53.4.33 m\_grow\_direction

```
bool seq64::perfroll::m_grow_direction [private]
```

Determines whether the section is growing to the left or to the right.

# 13.54 seq64::perftime Class Reference

This class implements drawing the piano time at the top of the "performance window" (the "song editor"). Inheritance diagram for seq64::perftime:

## **Public Member Functions**

• perftime (perform &perf, perfedit &parent, Gtk::Adjustment &hadjust, int ppqn=SEQ64\_USE\_DEFAULT\_P ← PQN)

Principal constructor.

virtual ~perftime ()

Let's provide a do-nothing virtual destructor.

- · void reset ()
- void set scale (int scale)
- void set\_guides (int snap, int measure)

Sets the m\_snap value and the m\_measure\_length members directly from the function parameters, which are in units of pulses (sometimes misleadingly called "ticks".)

· void increment size ()

This function does nothing.

### **Private Member Functions**

• void enqueue draw ()

Wraps queue\_draw() and forwards the call to the parent perfedit, so that it can forward it to any other perfedit that exists.

void set zoom (int z)

Implements the horizontal zoom feature.

void draw\_background ()

Separated out the drawing done in on\_expose\_event(), so that it can be redone when the zoom changes.

- void draw\_progress\_on\_window ()
- void change horz ()

Changes the m\_4bar\_offset and queues a draw operation.

void set\_ppqn (int ppqn)

Handles changes to the PPQN value in one place.

long tick\_to\_pixel (midipulse tick)

Common calculation to convert a pulse/tick value to a perftime x value.

midipulse pixel\_to\_tick (long pixel)

The inverse of tick\_to\_pixel().

· int tick offset ()

Centralizes calculation of the tick offset of the time bar.

• void update\_sizes ()

This function does nothing.

• int idle\_progress ()

This function just returns true.

• void update\_pixmap ()

This function does nothing.

void draw\_pixmap\_on\_window ()

This function does nothing.

• void on\_realize ()

Implements the on-realization event, then allocates some resources the could not be allocated in the constructor.

bool on expose event (GdkEventExpose \*ev)

Implements the on-expose event.

bool on\_button\_press\_event (GdkEventButton \*ev)

Implement the button-press event to set the L and R ticks.

• void on\_size\_allocate (Gtk::Allocation &r)

Implements a size-allocation event.

• bool on\_button\_release\_event (GdkEventButton \*)

This button-release handler does nothing.

bool key\_press\_event (GdkEventKey \*ev)

This callback function handles a key-press event.

#### **Private Attributes**

· perfedit & m\_parent

Provides a link to the perfedit that created this object.

· int m\_4bar\_offset

Not yet sure exactly what this member represents.

· int m\_tick\_offset

This member is m\_4bar\_offset times 16 times the current PPQN, to save some calculations and centralize this value.

• int m\_ppqn

The current value of PPQN, which we are trying to get to work everywhere, when PPQN is changed from the global ppqn = 192.

• int m\_snap

Snap value, starts out very small, equal to m\_ppqn.

int m\_measure\_length

Provides the length of a measure in pulses or ticks.

int m\_left\_marker\_tick

Holds the current location of the left (L) marker when arrow movement is in force.

int m\_right\_marker\_tick

Holds the current location of the right (R) marker when arrow movement is in force.

• int m perf scale x

A class version of the global c\_perf\_scale\_x factor.

· int m\_timearea\_y

A class version of the global c\_timerarea\_y factor.

### **Friends**

class perfedit

#### **Additional Inherited Members**

## 13.54.1 Constructor & Destructor Documentation

## 13.54.1.1 perftime()

In the constructor you can only allocate colors; get\_window() returns 0 because we have not been realized.

### Note

Note that we still have to use a global constant in the base-class constructor; we cannot assign it to the corresponding member beforehand.

#### **Parameters**

13.54.1.2 ~perftime()

р	Provides a reference to the main performance object of the application.
parent	Provides a reference to the object that contains this object, so that this object can tell the parent to queue up a drawing operation.
hadjust	Provides the horizontal scrollbar object needed so that perftime can respond to scrollbar cursor/thumb movement.
ppqn	An optional override of the default PPQN value for the application.

int measure )

This function then fills in the background, and queues up a draw operation.

#### **Parameters**

snap	Provides the number of snap-pulses (pulses per snap interval) as calculated in <pre>perfedit::set_guides()</pre> . This is actually equal to the measure-pulses divided by the snap value in perfedit; the snap value defaults to 8.	
measure	Provides the number of measure-pulses (pulses per measure) as calculated in perfedit::set_guides().	

## 13.54.2.4 increment\_size()

```
void seq64::perftime::increment_size ( ) [inline]
```

Compare it to perfroll::increment\_size().

```
13.54.2.5 enqueue_draw()
void seq64::perftime::enqueue_draw ( ) [private]
```

The parent perfedit will call perftime::queue\_draw() on behalf of this object, and it will pass a perftime::enqueue\_ draw() to the peer perfedit's perftime, if the peer exists.

Redraws the background if the new zoom checked out.

#### **Parameters**

z Provides the zoom value, which is checked, and then copied into m\_perf\_scale\_x.

```
13.54.2.7 draw_background()
```

```
void seq64::perftime::draw_background ( ) [private]
```

Note that m\_measure\_length == 0 will cause integer overflow.

```
13.54.2.8 draw_progress_on_window()
```

```
void seq64::perftime::draw_progress_on_window ( ) [private]
```

## 13.54.2.9 change\_horz()

```
void seq64::perftime::change_horz ( ) [private]
```

Again, uses the constant, 16 [now offloaded to the new tick\_offset() function.].

```
13.54.2.10 set_ppqn()
```

It also modifies m\_snap, m\_measure\_length (but always for four measures!), and m\_tick\_offset.

**Todo** We need make the 4 constant variable per the number of beats (quarter-notes) per bar, and also at least make 16 (4x4) a meaningful manifest constant.

#### **Parameters**

ppqn The override value for the PPQN.

## 13.54.2.11 tick\_to\_pixel()

#### **Parameters**

tick

The horizontal tick value to convert to an x pixel value, based on tick-offset and the x-scale.

#### Returns

Returns the x-pixel representing the time location parameter.

#### 13.54.2.12 pixel\_to\_tick()

### **Parameters**

```
pixel The pixel value.
```

#### Returns

Returns the time value represented b the pixel.

## 13.54.2.13 tick\_offset()

```
int seq64::perftime::tick_offset ( ) [inline], [private]
```

#### Returns

Returns m\_4bar\_offset \* 16 \* m\_ppqn.

## 13.54.2.14 update\_sizes()

```
void seq64::perftime::update_sizes ( ) [inline], [private]
```

## 13.54.2.15 idle\_progress()

```
int seq64::perftime::idle_progress ( ) [inline], [private]
```

#### 13.54.2.16 update\_pixmap()

```
void seq64::perftime::update_pixmap ( ) [inline], [private]

13.54.2.17  draw_pixmap_on_window()

void seq64::perftime::draw_pixmap_on_window ( ) [inline], [private]

13.54.2.18  on_realize()

void seq64::perftime::on_realize ( ) [private]
```

It is important to call the base-class version of this function.

The former work of this function is now done in base-class's on realize() and in its constructor now.

```
m_window = get_window();
m_gc = Gdk::GC::create(m_window);
m_window->clear();
set_size_request(10, m_timearea_y);
```

### 13.54.2.19 on\_expose\_event()

Redraws the background.

#### Note

The perfedit object is created early on. When brought on-screen from mainwnd (the main window), first, perftime::on\_realize() is called, then this event is called.

#### **Parameters**

```
ev The expose event, not used.
```

# Returns

Always returns true.

#### 13.54.2.20 on\_button\_press\_event()

Added functionality to try to set the start-tick if ctrl-left-click is pressed.

```
p0 The button event.
```

#### Returns

Always returns true.

Why is setting the start-tick disabled? We re-enable it and see if it works. To our surprise, it works, but it sticks between stop/pause and the next playback in the performance editor. We added a feature where stop sets the start-tick to the left tick (or the beginning tick).

#### 13.54.2.21 on\_size\_allocate()

#### 13.54.2.22 on\_button\_release\_event()

"ev", The button event parameter, is not used.

#### Returns

Always returns false

# 13.54.2.23 key\_press\_event()

```
bool seq64::perftime::key_press_event (
    GdkEventKey * ev ) [private]
```

Can't get the keystroke events to be seen by perfroll or perftime here using the normal callback function for keystrokes, and not sure why. The perfedit object can call this function, and that call works, so the perfedit class, which does get keystrokes, calls this function to do the work.

This function uses the "I" key to activate the movement of the "L" marker with the arrow keys, by the interval of on snap value for each press. It also uses the "r" key to activate the movement of the "R" marker, and the "x" to deactivate either movement move.

Be aware that there is no visual feedback, as yet, that one is in the movement mode.

Also be aware the changing the name of this function from "key\_press\_event()" to "on\_key\_press\_event()" will disrupt the process, causing keystrokes to not get here. Too tricky.

## 13.54.3 Friends And Related Function Documentation

## 13.54.3.1 perfedit

```
friend class perfedit [friend]
```

#### 13.54.4 Field Documentation

#### 13.54.4.1 m\_parent

```
perfedit& seq64::perftime::m_parent [private]
```

We want to support two perfedit windows, but the children of perfedit will have to communicate changes requiring a redraw through the parent.

```
13.54.4.2 m_4bar_offset
```

```
int seq64::perftime::m_4bar_offset [private]
```

Also, why always 4/16 in the calculations of this value? Might be able to get rid of this member, though it's a bit tricky.

# 13.54.4.3 m\_tick\_offset

```
int seq64::perftime::m_tick_offset [private]
```

Why 16?

### 13.54.4.4 m\_ppqn

```
int seq64::perftime::m_ppqn [private]
```

## 13.54.4.5 m\_snap

```
int seq64::perftime::m_snap [private]
```

## 13.54.4.6 m\_measure\_length

```
int seq64::perftime::m_measure_length [private]
```

This value is m\_ppqn \* 4, though eventually we want to employ a more flexible representation of measure length. Supports perftime's keystroke processing.

```
13.54.4.7 m_left_marker_tick

int seq64::perftime::m_left_marker_tick [private]

Otherwise it is -1. Supports perftime's keystroke processing.

13.54.4.8 m_right_marker_tick

int seq64::perftime::m_right_marker_tick [private]

Otherwise it is -1. Supports perftime's keystroke processing.

13.54.4.9 m_perf_scale_x

int seq64::perftime::m_perf_scale_x [private]

13.54.4.10 m_timearea_y

int seq64::perftime::m_timearea_y [private]
```

# 13.55 seq64::rc\_settings Class Reference

This class contains the options formerly named "global xxxxxx".

## **Public Member Functions**

• rc\_settings ()

Default constructor.

• rc\_settings (const rc\_settings &rhs)

Copy constructor.

• rc\_settings & operator= (const rc\_settings &rhs)

Principal assignment operator.

• std::string config\_filespec () const

Constructs the full path and file specification for the "rc" file based on whether or not the legacy Seq24 filenames are being used.

• std::string user\_filespec () const

Constructs the full path and file specification for the "user" file based on whether or not the legacy Seq24 filenames are being used.

void set\_defaults ()

Sets the default values.

• bool auto\_option\_save () const

'Getter' function for member m\_auto\_option\_save

· bool legacy\_format () const

'Getter' function for member m\_legacy\_format

• bool lash support () const

'Getter' function for member m\_lash\_support

• bool allow\_mod4\_mode () const

void stats (bool flag)

'Setter' function for member m\_stats

void pass\_sysex (bool flag)

'Setter' function for member m pass sysex

void with\_jack\_transport (bool flag)

'Setter' function for member m\_with\_jack\_transport

void with\_jack\_master (bool flag)

'Setter' function for member m\_with\_jack\_master

void with\_jack\_master\_cond (bool flag)

'Setter' function for member m\_with\_jack\_master\_cond

void filter\_by\_channel (bool flag)

'Setter' function for member m\_song\_start\_mode,

void manual\_alsa\_ports (bool flag)

'Setter' function for member m\_manual\_alsa\_ports

void reveal\_alsa\_ports (bool flag)

'Setter' function for member m\_reveal\_alsa\_ports

void print\_keys (bool flag)

'Setter' function for member m\_print\_keys

void device\_ignore (bool flag)

'Setter' function for member m\_device\_ignore

void device\_ignore\_num (int value)

'Setter' function for member m\_device\_ignore\_num However, please note that this value, while set in the options processing of the main module, does not appear to be used anywhere in the code in seq24, Sequencer24, and this application.

void interaction\_method (interaction\_method\_t value)

'Setter' function for member m\_interaction\_method

void filename (const std::string &value)

'Setter' function for member m filename

void jack\_session\_uuid (const std::string &value)

'Setter' function for member m\_jack\_session\_uuid

void last\_used\_dir (const std::string &value)

'Setter' function for member m last used dir

void config\_directory (const std::string &value)

'Setter' function for member m\_config\_directory

void set\_config\_files (const std::string &value)

'Setter' function for member m\_config\_filename and m\_user\_filename

void config\_filename (const std::string &value)

'Setter' function for member m\_config\_filename ("rc")

void user\_filename (const std::string &value)

'Setter' function for member m\_user\_filename ("usr")

void config\_filename\_alt (const std::string &value)

'Setter' function for member m\_config\_filename\_alt

void user\_filename\_alt (const std::string &value)

'Setter' function for member m\_user\_filename\_alt

## **Private Member Functions**

• std::string home\_config\_directory () const

Provides the directory for the configuration file, and also creates the directory if necessary.

#### **Private Attributes**

• bool m\_auto\_option\_save

[auto-option-save] setting.

• bool m\_legacy\_format

Write files in legacy format.

• bool m\_lash\_support

Enable LASH, if compiled in.

bool m\_allow\_mod4\_mode

Allow Mod4 to hold drawing mode.

bool m\_allow\_snap\_split

Allow snap-split of a trigger.

bool m\_allow\_click\_edit

Allow double-click edit pattern.

• bool m\_show\_midi

Show MIDI events to console.

bool m\_priority

Run at high priority (Linux only).

• bool m\_stats

Show some output statistics.

bool m\_pass\_sysex

Pass SysEx to outputs, not ready.

• bool m\_with\_jack\_transport

Enable synchrony with JACK.

bool m\_with\_jack\_master

Serve as a JACK transport Master.

· bool m with jack master cond

Serve as JACK Master if possible.

bool m\_filter\_by\_channel

Record only sequence channel data.

• bool m\_manual\_alsa\_ports

[manual-alsa-ports] setting.

· bool m\_reveal\_alsa\_ports

[reveal-alsa-ports] setting.

bool m\_print\_keys

Show hot-key in main window slot.

• bool m\_device\_ignore

From seq24 module, unused!

int m\_device\_ignore\_num

From seq24 module, unused!

· interaction method t m interaction method

[interaction-method]

std::string m\_filename

Provides the name of current MIDI file.

• std::string m\_jack\_session\_uuid

Holds the JACK UUID value that makes this JACK connection unique.

std::string m\_last\_used\_dir

Holds the directory from which the last MIDI file was opened (or saved).

std::string m config directory

Holds the current "rc" and "user" configuration directory.

• std::string m config filename

Holds the current "rc" configuration filename.

• std::string m\_user\_filename

Holds the current "user" configuration filename.

std::string m\_config\_filename\_alt

Holds the legacy "rc" filename, ".seq24rc".

· std::string m user filename alt

Holds the legacy "user" filename, ".seq24usr".

## Friends

- · class optionsfile
- · class options
- · class mainwnd
- int parse command line options (perform &p, int argc, char \*argv [])

Parses the command-line options on behalf of the application.

bool help\_check (int argc, char \*argv [])

Checks to see if the first option is a help or version argument, just so we can skip the "Reading configuration ..." messages.

# 13.55.1 Detailed Description

It gives us a whole lot more encapsulation and control over how the options of the "rc" file (optionsfile) are set and used. Note that this class does not support the hot-keys options; those are handled in the keys\_perform class.

#### 13.55.2 Constructor & Destructor Documentation

*rhs* The source of the data for the copy.

#### 13.55.3 Member Function Documentation

#### 13.55.3.1 operator=()

#### **Parameters**

*rhs* The source of the data for the assignment.

#### Returns

Returns a reference to the destination for use in serial assignments.

#### 13.55.3.2 config\_filespec()

```
std::string seq64::rc_settings::config_filespec ( ) const
```

## Returns

If home\_config\_directory() returns a non-empty string, then the legacy or normal "rc" configuration file-name is appended to that result, and returned. Otherwise, an empty string is returned.

## 13.55.3.3 user\_filespec()

```
std::string seq64::rc_settings::user_filespec ( ) const
```

#### Returns

If home\_config\_directory() returns a non-empty string, then the legacy or normal "user" configuration file-name is appended to that result, and returned. Otherwise, an empty string is returned.

#### 13.55.3.4 set\_defaults()

```

             int value ) [protected]
```

value The value to use to make the setting.

```
13.55.3.53 interaction_method() [2/2]
```

#### **Parameters**

value The value to use to make the setting.

#### 13.55.3.54 filename() [2/2]

#### **Parameters**

value The value to use to make the setting.

# 13.55.3.55 jack\_session\_uuid() [2/2]

# **Parameters**

value The value to use to make the setting.

# 13.55.3.56 last\_used\_dir() [2/2]

#### **Parameters**

value The value to use to make the setting.

#### 13.55.3.57 config\_directory() [2/2]

```
void seq64::rc\_settings::config\_directory (
```

```
const std::string & value ) [protected]
```

value The value to use to make the setting.

# 13.55.3.58 set\_config\_files()

Implements the -config option to change both configuration files ("rc" and "usr") with one option.

#### **Parameters**

value

The value to use to make the setting, if the string is not empty. If the value has an extension, it is stripped first.

## 13.55.3.59 config\_filename() [2/2]

#### **Parameters**

value

The value to use to make the setting, if the string is not empty. If there is no period in the string, then ".rc" is appended to the end of the filename.

### 13.55.3.60 user\_filename() [2/2]

# Parameters

value

The value to use to make the setting, if the string is not empty. If there is no period in the string, then ".usr" is appended to the end of the filename.

#### 13.55.3.61 config\_filename\_alt() [2/2]

#### **Parameters**

*value* The value to use to make the setting, if the string is not empty.

value	The value to use to make the setting.
-------	---------------------------------------

#### 13.55.3.63 home\_config\_directory()

```
std::string seq64::rc_settings::home_config_directory ( ) const [private]
```

If the legacy format is in force, then the home directory for the configuration is (in Linux) "/home/username", and the configuration file is ".seq24rc".

If the new format is in force, then the home directory is (in Linux) "/home/username/.config/sequencer64", and the configuration file is "sequencer64.rc".

## Returns

Returns the selected home configuration directory. If it does not exist, or could not be created, then an empty string is returned.

#### 13.55.4 Friends And Related Function Documentation

```
13.55.4.1 optionsfile
```

```
friend class optionsfile [friend]

13.55.4.2 options

friend class options [friend]

13.55.4.3 mainwnd

friend class mainwnd [friend]

13.55.4.4 parse_command_line_options
```

char \* argv[] ) [friend]

Note that, since we call this function twice (once before the configuration files are parsed, and once after), we have to make sure that the global value optind is reset to 0 before calling this function. Note that the traditional reset value for optind is 1, but 0 is used in GNU code to trigger the internal initialization routine of get\_opt().

р	The performance object that implements some of the command-line options.
argc	The number of command-line arguments.
argv	The array of command-line argument pointers.

#### Returns

Returns the value of optind if no help-related options were provided.

# 13.55.4.5 help\_check

Also check for the –legacy option. Finally, it also checks for the "?" option that people sometimes use as a guess to get help.

#### **Parameters**

argc	The number of command-line arguments.
argv	The array of command-line argument pointers.

#### Returns

Returns true only if -v, -V, -version, -h, -help, or "?" were encountered. If the legacy options occurred, then rc().legacy\_format(true) is called, as a side effect, because it will be needed before we parse the options.

# 13.56 seq64::rect Class Reference

A small helper class representing a rectangle.

#### **Data Fields**

• int x

The x-coordinate of the origin of the rectangle.

• int y

The y-coordinate of the origin of the rectangle.

• int height

The height of the rectangle, in units of pixels.

• int width

The width of the rectangle, in units of pixels.

## 13.56.1 Field Documentation

```
13.56.1.1 x
```

int seq64::rect::x

## 13.56.1.2 y

int seq64::rect::y

## 13.56.1.3 height

int seq64::rect::height

## 13.56.1.4 width

int seq64::rect::width

# 13.57 seq64::gui\_drawingarea\_gtk2::rect Struct Reference

A small helper structure representing a rectangle.

# **Data Fields**

- int x
- int y
- · int height
- int width

## 13.57.1 Field Documentation

## 13.57.1.1 x

int seq64::gui\_drawingarea\_gtk2::rect::x

## 13.57.1.2 y

int seq64::gui\_drawingarea\_gtk2::rect::y

# 13.57.1.3 height

int seq64::gui\_drawingarea\_gtk2::rect::height

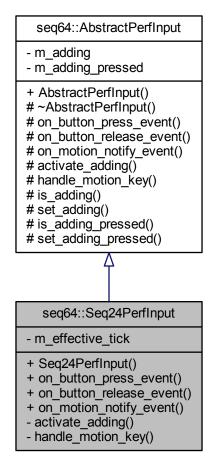

# 13.57.1.4 width

int seq64::gui\_drawingarea\_gtk2::rect::width

# 13.58 seq64::Seq24PerfInput Class Reference

Implements the default (Seq24) performance input characteristics of this application.

Inheritance diagram for seq64::Seq24PerfInput:

# **Public Member Functions**

- Seq24PerfInput ()
- bool on\_button\_press\_event (GdkEventButton \*a\_ev, perfroll &roll)

Handles the normal variety of button-press event.

- bool on\_button\_release\_event (GdkEventButton \*a\_ev, perfroll &roll)

  Handles various button-release events.
- bool on\_motion\_notify\_event (GdkEventMotion \*a\_ev, perfroll &roll)

Handles the normal motion-notify event.

#### **Private Member Functions**

virtual void activate\_adding (bool a\_adding, perfroll &roll)

A popup menu (which one?) calls this.

bool handle\_motion\_key (bool is\_left, perfroll &roll)

Handles the keystroke motion-notify event for moving a pattern back and forth in the performance.

#### **Private Attributes**

· midipulse m effective tick

The current tick for the current segment?

#### **Friends**

· class perfroll

#### **Additional Inherited Members**

#### 13.58.1 Constructor & Destructor Documentation

#### 13.58.1.1 Seq24PerfInput()

```
seq64::Seq24PerfInput::Seq24PerfInput ( ) [inline]
```

#### 13.58.2 Member Function Documentation

#### 13.58.2.1 on\_button\_press\_event()

Is there any easy way to use ctrl-left-click as the middle button here?

# Stazed:

```
roll.m_drop_y will be adjusted by perfroll::change_vert() for any scroll after it was originally selected. The call here to draw_drawable_row() [now folded into draw_all()] will have the wrong y location and un-select will not occur (or the wrong sequence will be unselected) if the user scrolls the track up or down to a new y location, if not adjusted.
```

# Returns

Returns true if a modification occurred.

Implements seq64::AbstractPerfInput.

#### 13.58.2.2 on\_button\_release\_event()

Any use for the middle-button or ctrl-left-click we can add?

#### Returns

Returns true if any modification occurred.

Implements seq64::AbstractPerfInput.

#### 13.58.2.3 on\_motion\_notify\_event()

#### Returns

Returns true if a modification occurs. This function used to always return true.

Implements seq64::AbstractPerfInput.

#### 13.58.2.4 activate\_adding()

What does it mean?

Implements seq64::AbstractPerfInput.

## 13.58.2.5 handle\_motion\_key()

What happens when the mouse is used to drag the pattern is that, first, roll.m\_drop\_tick is set by left-clicking into the pattern to select it. As the pattern is dragged, the drop-tick value does not change, but the tick (converted from the moving x value) does.

Then the button-handler sets roll.m\_moving = true, and calculates roll.m\_drop\_tick\_trigger\_offset = roll.m\_drop\_tick - p.get\_sequence(dropseq)->selected\_trigger\_start();

The motion handler sees that roll.m\_moving is true, gets the new tick value from the new x value, offsets it, and calls p.get\_sequence(dropseq)->move\_selected\_triggers\_to(tick, true).

When the user releases the left button, then roll.m\_growing is turned of and the roll draw\_all()'s.

is_left	False denotes the right arrow key, and true denotes the left arrow key.	
roll	Provides a reference to the parent roll, which keeps track of most of the information about the status of	
	the window.	

#### Returns

Returns true if there was some action able to happen that would necessitate a window update. We've updated triggers::move\_selected() [called indirectly near the end of this routine] to return false if no more movement could be made. This prevents this routine from moving way ahead after movement of the selected (in the user-interface) trigger stops.

Implements seq64::AbstractPerfInput.

#### 13.58.3 Friends And Related Function Documentation

#### 13.58.3.1 perfroll

```
friend class perfroll [friend]
```

# 13.59 seq64::Seq24SeqEventInput Struct Reference

This structure implement the normal interaction methods for Seq24.

#### **Public Member Functions**

• Seq24SeqEventInput ()

Default constructor.

void set\_adding (bool adding, seqevent &ths)

Changes the mouse cursor to a pencil or a left pointer in the given seqevent object, depending on the first parameter.

• bool on button press event (GdkEventButton \*ev, seqevent &ths)

Implements the on-button-press event callback.

• bool on\_button\_release\_event (GdkEventButton \*ev, seqevent &ths)

Implements the on-button-release callback.

bool on\_motion\_notify\_event (GdkEventMotion \*ev, seqevent &ths)

Implements the on-motion-notify event.

# **Data Fields**

• bool m\_adding

True if we're adding events via the mouse.

## 13.59.1 Constructor & Destructor Documentation

# 13.59.1.1 Seq24SeqEventInput()

```
seq64::Seq24SeqEventInput::Seq24SeqEventInput ( ) [inline]
```

#### 13.59.2 Member Function Documentation

#### 13.59.2.1 set\_adding()

Modifies m\_adding as well.

#### **Parameters**

adding	The value to set m_adding to, and if true, sets the mouse cursor to a pencil icon, otherwise sets it to a standard mouse-pointer icon.
seqev	The seqevent whose window will be set to "adding" mode.

# 13.59.2.2 on\_button\_press\_event()

Set values for dragging, then reset the box that holds dirty redraw spot. Then do the rest.

#### **Parameters**

ev	The button event for the press of a mouse button.
seqev	Provides the seqevent strip to be affected by this button event.

#### Returns

Returns true if a likely modification was made. This function used to return true all the time.

Needs update. seqev.m\_seq.unselect(); ???????

#### 13.59.2.3 on\_button\_release\_event()

#### **Parameters**

ev	The button event for the release of a mouse button.	
seqev	Provides the seqevent strip to be affected by this button event.	

## Returns

Returns true if a likely modification was made. This function used to return true all the time.

#### 13.59.2.4 on\_motion\_notify\_event()

#### **Parameters**

ev	The button event for the motion of the mouse cursor.	
seqev	Provides the sequeent strip to be affected by this button event.	

#### Returns

Returns true if a likely modification was made. This function used to return true all the time.

### 13.59.3 Field Documentation

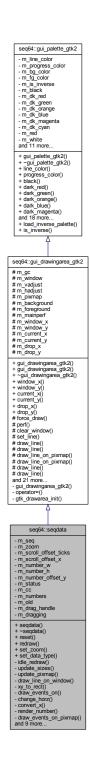

## 13.59.3.1 m\_adding

```
bool seq64::Seq24SeqEventInput::m_adding
```

# 13.60 seq64::seqdata Class Reference

This class supports drawing piano-roll eventis on a window.

Inheritance diagram for seq64::seqdata:

# **Public Member Functions**

- seqdata (sequence &seq, perform &p, int zoom, Gtk::Adjustment &hadjust)

  Principal constructor.
- virtual ∼seqdata ()

Let's provide a do-nothing virtual destructor.

• void reset ()

This function calls update\_size().

void redraw ()

Calls change\_horz() to update the pixmap and queue up a redraw operation.

void set zoom (int a zoom)

Sets the zoom to the given value and resets the view via the reset function.

void set\_data\_type (midibyte status, midibyte control)

Sets the status to the given value, and the control to the optional given value, which defaults to 0, then calls redraw().

#### **Private Member Functions**

• int idle\_redraw ()

Draws events on this object's built-in window and pixmap.

void update\_sizes ()

Updates the sizes in the pixmap if the view is realized, and queues up a draw operation.

void update\_pixmap ()

Simply calls draw\_events\_on\_pixmap().

• void draw\_line\_on\_window ()

Draws on vertical line on the data window.

void xy\_to\_rect (int x1, int y1, int x2, int y2, int &rx, int &ry, int &rw, int &rh)

This function takes two points, and returns an XWin rectangle, returned via the last four parameters.

void draw\_events\_on (Glib::RefPtr< Gdk::Drawable > drawable)

Draws events on the given drawable object.

• void change horz ()

Change the scrolling offset on the x-axis, and redraw.

void convert\_x (int x, midipulse &tick)

This function takes screen coordinates, and gives the horizontaol tick value based on the current zoom, returned via the second parameter.

• void render number (Glib::RefPtr< Gdk::Pixmap > &pixmap, int x, int y, const char \*const num)

Convenience function for rendering numbers.

void draw\_events\_on\_pixmap ()

Simply calls draw\_events\_on() for this object's built-in pixmap.

void draw\_pixmap\_on\_window ()

Simply queues up a draw operation.

void on\_realize ()

Implements the on-realization event, by calling the base-class version and then allocating the resources that could not be allocated in the constructor.

bool on\_expose\_event (GdkEventExpose \*ev)

Implements the on-expose event by calling draw\_drawable() on the event.

bool on\_button\_press\_event (GdkEventButton \*ev)

Implements a mouse button-press event.

bool on\_button\_release\_event (GdkEventButton \*ev)

Implement a button-release event.

• bool on\_motion\_notify\_event (GdkEventMotion \*ev)

Handles a motion-notify event.

bool on\_leave\_notify\_event (GdkEventCrossing \*ev)

Handles an on-leave notification event.

• bool on\_scroll\_event (GdkEventScroll \*ev)

Implements the on-scroll event.

• void on\_size\_allocate (Gtk::Allocation &)

Handles a size-allocation event by updating m\_window\_x and m\_window\_y, and then updating all of the sizes of the data pane in update\_sizes().

#### **Private Attributes**

· sequence & m seq

Points to the sequence whose data is being affected by this class.

• int m zoom

Sets the zoom value for this part of the sequence editor, one pixel == m\_zoom ticks, i.e.

• int m\_scroll\_offset\_ticks

The value of the leftmost tick in the data pane.

• int m scroll offset x

The value of the leftmost pixel in the data pane.

· int m number w

The adjusted width of a digit in a data number.

· int m number h

The adjusted height of all digits in a data number.

int m\_number\_offset\_y

A new value to make it easier to adapt the vertical number drawing of a data item's numeric value to a different font.

• midibyte m\_status

Holds the status byte of the next event in the sequence, and indicates What the data window is currently editing or drawing.

• midibyte m\_cc

Holds the MIDI CC byte of the next event in the sequence, and indicates What the data window is currently editing or drawing.

Glib::RefPtr< Gdk::Pixmap > m\_numbers [c\_dataarea\_y]

Holds the pixmaps for each number (0 to 127) that can be drawn for a data value in the data pane.

GdkRectangle m\_old

This rectangle is used in blanking out a data line in draw line on window().

- bool m\_drag\_handle
- bool m dragging

This value is true if the mouse is being dragged in the data pane, which is done in order to change the height and value of each data line.

# Friends

- · class Ifownd
- · class seqevent
- · class segroll

# **Additional Inherited Members**

#### 13.60.1 Constructor & Destructor Documentation

# 13.60.1.1 segdata()

In the constructor one can only allocate colors, get\_window() returns 0 because this pane has not yet been realized.

seq	The sequence that is being displayed and edited by this data pane.	
р	The performance object that oversees all of the sequences. This object is needed here only to access the perform::modify() function.	
zoom	The starting zoom of this pane.	
hadjust	The horizontal adjustment object provided by the parent class, seqedit, that created this pane.	

```
13.60.1.2 \simseqdata()
```

```
virtual seq64::seqdata::\simseqdata ( ) [inline], [virtual]
```

#### 13.60.2 Member Function Documentation

#### 13.60.2.1 reset()

```
void seq64::seqdata::reset ( )
```

Then, regardless of whether the view is realized, updates the pixmap and queues up a draw operation.

#### Note

If it weren't for the is\_realized() condition, we could just call update\_sizes(), which does all this anyway.

## 13.60.2.2 redraw()

```
void seq64::seqdata::redraw ( ) [inline]
```

# 13.60.2.3 set\_zoom()

```
void seq64::seqdata::set_zoom ( int \ z \ )
```

Called by seqedit::set\_zoom(), which validates the zoom value.

## **Parameters**

z The desired zoom value, assumed to be validated already. See the seqedit::set\_zoom() function.

# 13.60.2.4 set\_data\_type()

Perhaps we should check that at least one of the parameters causes a change.

#### **Parameters**

status	The MIDI event byte (status byte) to set.
control	The MIDI CC value to set.

### 13.60.2.5 idle\_redraw()

```
int seq64::seqdata::idle_redraw ( ) [private]
```

This drawing is done only if there is no dragging in progress, to guarantee no flicker.

```
13.60.2.6 update_sizes()
```

```
void seq64::seqdata::update_sizes ( ) [private]
```

It creates a pixmap with window dimensions given by m\_window\_x and m\_window\_y.

We thought there was a potential memory leak, since m\_pixmap is created every time the window is resized, but valgrind says otherwise... maybe. An awful lot of Gtk leaks!

# 13.60.2.7 update\_pixmap()

```
void seq64::seqdata::update_pixmap ( ) [private]
```

## 13.60.2.8 draw\_line\_on\_window()

```
void seq64::seqdata::draw_line_on_window ( ) [private]
```

#### 13.60.2.9 xy\_to\_rect()

```
void seq64::seqdata::xy_to_rect (
    int x1,
    int y1,
    int x2,
    int y2,
    int & rx,
    int & ry,
    int & rw,
    int & rh ) [private]
```

It checks the mins/maxes, then fills in x, y, and width, height.

### **Parameters**

	x1	The input x value for the first data point.
	y1	The input y value for the first data point.
Generated	b¥ <b>B</b> ox	ygEhe input x value for the second data point.
	<i>y</i> 2	The input y value for the second data point.
out	rx	The output for the x value of the XWin rectangle.
out	ry	The output for the y value of the XWin rectangle.

#### 13.60.2.10 draw\_events\_on()

Very similar to seqevent :: draw\_events\_on(). And yet it doesn't handle zooming as well, must fix!

#### Stazed:

For Note On there can be multiple events on the same vertical in which the selected item can be covered. For Note On the selected item needs to be drawn last so it can be seen. So, for other events the variable num\_selected\_events will be -1 for ALL\_EVENTS. For Note On only, the variable will be the number of selected events. If 0 then only one pass is needed. If > 0 then two passes are needed, one for unselected (first), and one for selected (last). For the first pass, if any events are selected, the selection type is EVENTS\_UNSELECTED. For the second pass, it will be set to num\_selected\_events.

We now draw the data line for selected event in dark orange, instead of black. We're not likely to adopt the Stazed convention of drawing in blue. Also, there seem to be some bugs in how the data selection works. Needs more evaluation.

Also, if we decide to draw handle on each vertical data line, it would look nicer if a circle.

#### **Parameters**

```
drawable The given drawable object.
```

```
13.60.2.11 change_horz()
```

```
void seq64::seqdata::change_horz ( ) [private]
```

Basically identical to seqevent::change\_horz().

#### 13.60.2.12 convert\_x()

#### 13.60.2.13 render\_number()

pixmap	The reference pointer to the GDK pixmap onto which this number will be drawing.
Х	The x-coordinate of the position of the text.
У	The y-coordinate of the position of the text.
num	The number to be rendered. This should be a string reference, but oh well.

```
13.60.2.14 draw_events_on_pixmap()
```

```
void seq64::seqdata::draw_events_on_pixmap ( ) [inline], [private]

13.60.2.15 draw_pixmap_on_window()

void seq64::seqdata::draw_pixmap_on_window ( ) [inline], [private]

13.60.2.16 on_realize()
```

It also connects up the change\_horz() function.

void seq64::seqdata::on\_realize ( ) [private]

Note that this function creates a small pixmap for every possible y-value, where y ranges from 0 to MIDI\_COUNT $\leftarrow$  \_MAX-1 = 127. It then fills each pixmap with a numeric representation of that y value, up to three digits (left-padded with spaces).

#### 13.60.2.17 on\_expose\_event()

### **Parameters**

ev	Provides the expose-event.
----	----------------------------

# Returns

Always returns true.

# 13.60.2.18 on\_button\_press\_event()

This function pushes the undo information for the sequence, sets the drop-point, resets the box that holds dirty redraw spot, and sets m\_dragging to true.

*ev* Provides the button-press event.

#### Returns

Always returns true.

#### 13.60.2.19 on\_button\_release\_event()

```
bool seq64::seqdata::on_button_release_event (
    GdkEventButton * ev ) [private]
```

Sets the current point. If m\_dragging is true, then the sequence data is changed, the performance modification flag is set, and m\_dragging is reset.

#### **Parameters**

ev Provides the button-release event.

#### Returns

Returns true if a modification occurred, and in that case also sets the perform modification flag.

#### 13.60.2.20 on\_motion\_notify\_event()

It converts the x,y of the mouse to ticks, then sets the events in the event-data-range, updates the pixmap, draws events in the window, and draws a line on the window.

# **Parameters**

ev The motion event.

# Returns

Returns true if a change in event data occurred. If true, then the perform modification flag is set.

# 13.60.2.21 on\_leave\_notify\_event()

Parameter "p0", the crossing point for the event, is unused.

```
13.60.2.22 on_scroll_event()
```

This scroll event only handles basic scrolling, without any modifier keys such as the Ctrl of Shift masks. If there is a note (seqroll pane) or event (seqevent pane) selected, and mouse hovers over the data area (seqdata pane), then this scrolling action will increase or decrease the value of the data item, which lengthens of shortens the line drawn.

**Todo** DOCUMENT the segdata scrolling behavior in the documentation projects.

#### **Parameters**

ev Provides the scroll-event.

### Returns

Always returns true.

### 13.60.2.23 on\_size\_allocate()

### **Parameters**

r Provides the allocation event.

### 13.60.3 Friends And Related Function Documentation

# 13.61 seq64::seqedit Class Reference

Implements the Pattern Editor, which has references to:

Inheritance diagram for seq64::seqedit:

### **Public Member Functions**

- seqedit (perform &perf, sequence &seq, int pos, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)
   Principal constructor.
- virtual ∼seqedit ()

A rote destructor.

#### **Private Member Functions**

void set zoom (int zoom)

Selects the given zoom value.

void set snap (int snap)

Selects the given snap value, which is the number of ticks in a snap-sized interval.

void set\_note\_length (int note\_length)

Selects the given note-length value.

void set beats per bar (int bpm)

Set the bpm (beats per measure) value, using the given parameter, and some internal values passed to apply\_\leftarrow length().

void set beat width (int bw)

Set the bw (beat width) value, using the given parameter, and some internal values passed to apply\_length().

void set transpose image (bool istransposable)

Changes the image used for the transpose button.

void set\_rec\_vol (int recvol)

Passes the given parameter to sequence::set\_rec\_vol().

void horizontal\_adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

void vertical\_adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

void horizontal\_set (double value)

Sets the exact position of a horizontal scroll-bar.

• void vertical\_set (double value)

Sets the exact position of a vertical scroll-bar.

void set\_measures (int lim)

Set the measures value, using the given parameter, and some internal values passed to apply\_length().

· void apply\_length (int bpm, int bw, int measures)

Sets the sequence length based on the three given parameters.

long get\_measures ()

Calculates the measures value based on the bpm (beats per measure), ppqn (parts per quarter note), and bw (beat width) values, and returns the resultant measures value.

• void set\_midi\_channel (int midichannel, bool user\_change=false)

Selects the given MIDI channel parameter in the main sequence object, so that it will use that channel.

void set midi bus (int midibus, bool user change=false)

Selects the given MIDI buss parameter in the main sequence object, so that it will use that buss.

• void set scale (int scale)

Selects the given scale value.

- void set\_chord (int chord)
- void set\_key (int note)

Selects the given key (signature) value.

void set background sequence (int seq)

Draws the given background sequence on the Pattern editor so that the musician has something to see that can be played against.

void transpose\_change\_callback ()

Passes the transpose status to the sequence object.

• void name\_change\_callback ()

Set the name for the main sequence to this object's entry name.

void play\_change\_callback ()

Passes the play status to the sequence object.

void record\_change\_callback ()

Passes the recording status to the sequence object.

void q\_rec\_change\_callback ()

Passes the quantized-recording status to the sequence object.

• void thru change callback ()

Passes the MIDI Thru status to the sequence object.

void undo\_callback ()

Pops an undo operation from the sequence object, and then tells the segroll, seqtime, seqdata, and seqevent objects to redraw.

void redo callback ()

Pops a redo operation from the sequence object, and then tell the segroll, seqtime, seqdata, and seqevent objects to redraw.

void set data type (midibyte status, midibyte control=0)

Sets the data type based on the given parameters.

- void update all windows ()
- · void fill top bar ()

This function inserts the user-interface items into the top bar or panel of the pattern editor; this bar has two rows of user interface elements.

void create\_menus ()

Creates the various menus by pushing menu elements into the menus.

• void popup\_menu (Gtk::Menu \*menu)

Pops up the given pop-up menu.

• void popup event menu ()

Populates the event-selection menu that drops from the "Event" button in the bottom row of the Pattern editor.

void popup\_midibus\_menu ()

Populates the MIDI Output buss pop-up menu.

void popup sequence menu ()

Populates the "set background sequence" menu (drops from the button that has some note-bars on it at the right of the second row of the top bar).

void popup\_tool\_menu ()

Sets up the pop-up menus that are brought up by pressing the Tools button, which shows a hammer image.

· void popup midich menu ()

Populates the MIDI Channel pop-up menu.

Gtk::Image \* create\_menu\_image (bool state=false)

Sets the menu pixmap depending on the given state, where true is a full menu (black backgroun), and empty menu (gray background).

• bool timeout ()

Update the window after a time out, based on dirtiness and on playback progress.

void do\_action (int action, int var)

Implements the actions brought forth from the Tools (hammer) button.

- void mouse\_action (mouse\_action\_e action)
- void start playing ()
- void stop\_playing ()
- · void change\_focus (bool set\_it=true)

Changes what perform and mainwid see as the "current sequence".

• void handle\_close ()

Handles closing the sequence editor.

· void on realize ()

On realization, calls the base-class version, and connects the redraw timeout signal, timed at redraw\_period\_ms().

void on\_set\_focus (Widget \*focus)

On receiving focus, attempt to tell mainwid that this sequence is now the current sequence.

bool on focus in event (GdkEventFocus \*)

Implements the on-focus event handling.

• bool on\_focus\_out\_event (GdkEventFocus \*)

Implements the on-unfocus event handling.

bool on\_delete\_event (GdkEventAny \*event)

Handles an on-delete event.

• bool on\_scroll\_event (GdkEventScroll \*ev)

Handles an on-scroll event.

bool on\_key\_press\_event (GdkEventKey \*ev)

Handles a key-press event.

### **Private Attributes**

- · friend segmenu
- · const int m initial zoom

Provides the initial zoom, used for restoring the original zoom using the 0 key.

• int m\_zoom

Provides the zoom values: 1 2 3 4, and 1, 2, 4, 8, 16.

• int m\_snap

Used in setting the snap-to value in pulses, of f = 1.

· int m\_note\_length

The default length of a note to be inserted by a right-left-click operation.

• int m\_scale

Setting for the music scale, can now be saved with the sequence.

· int m chord

Setting for the current chord generation; not now saved with the sequence.

int m key

Setting for the music key, can now be saved with the sequence.

• int m\_bgsequence

Setting for the background sequence, can now be saved with the sequence.

long m\_measures

Provides the length of the sequence in measures.

• int m\_ppqn

Holds a copy of the current PPQN for the sequence (and the entire MIDI file).

- int m\_pp\_whole
- int m\_pp\_eighth
- int m pp sixteenth
- sequence & m\_seq

Holds a reference to the sequence that this window represents.

• Gtk::MenuBar \* m\_menubar

A number of user-interface objects for common.

• Gtk::Menu \* m\_menu\_tools

The "hammer" tool button menu.

• Gtk::Menu \* m\_menu\_zoom

• Gtk::Menu \* m\_menu\_snap

Magnifying glass zoom menu.

Two-arrows grid-snap menu.

• Gtk::Menu \* m menu note length

Notes menu for note length.

Gtk::Menu \* m\_menu\_length

Pattern-length "bars" menu.

• Gtk::ToggleButton \* m\_toggle\_transpose

Transpose toggle button.

Gtk::HBox \* m\_hbox2

```
• Gtk::Image * m_image_transpose
     Image for transpose button.
• Gtk::Menu * m menu midich
     MIDI channel DIN menu button.
• Gtk::Menu * m_menu_midibus
     MIDI output buss menu button.
• Gtk::Menu * m_menu_data
      "Event" button to select data.
• Gtk::Menu * m menu key
      "Music key" menu button.
• Gtk::Menu * m menu scale
      "Music scale" menu button.

    Gtk::Menu * m_menu_chords

      "Chords" menu button.
• Gtk::Menu * m_menu_sequences
      "Background sequence" button.
• Gtk::Menu * m_menu_bpm
     Beats/measure numerator menu.
• Gtk::Menu * m_menu_bw
     Beat-width denominator menu.
• Gtk::Menu * m_menu_rec_vol
     Recording level "Vol" button.

    Gtk::Adjustment * m_vadjust

     Scrollbar and adjustment objects for horizontal and vertical panning.

    Gtk::Adjustment * m_hadjust

     Horizontal motion scratchpad.

    Gtk::VScrollbar * m vscroll new

     Main vertical scroll-bar.
• Gtk::HScrollbar * m_hscroll_new
     Main horizontal scroll-bar.
• seqkeys * m_seqkeys_wid
     Handles the piano-keys part of the pattern-editor user-interface.
• seqtime * m_seqtime_wid
     Handles the time-line (bar or measures) part of the pattern-editor user-interface.
• seqdata * m_seqdata_wid
     Handles the event-data part of the pattern-editor user-interface.
· seqevent * m seqevent wid
     Handles the small event part of the pattern-editor user-interface, where events can be moved and added.

    segroll * m segroll wid

     Handles the piano-roll part of the pattern-editor user-interface.

    Gtk::Button * m button Ifo

      The LFO button in the pattern editor.
• Ifownd * m_lfo_wnd
      The LFO window object used by the pattern editor.
• Gtk::Table * m table
     More user-interface elements.

    Gtk::VBox * m vbox

     Layout box for 3 h-boxes.

    Gtk::HBox * m hbox

      Topmost menu/text dialog row.
```

Second row of buttons.

• Gtk::Button \* m\_button\_undo

Undo-edit button.

• Gtk::Button \* m button redo

Redo-edit button.

Gtk::Button \* m\_button\_quantize

Quantize-pattern button.

• Gtk::Button \* m button tools

Button for the Tools menu.

• Gtk::Button \* m\_button\_sequence

Button for Background pattern.

• Gtk::Entry \* m\_entry\_sequence

Text for background pattern.

• Gtk::Button \* m\_button\_bus

Button for MIDI Buss menu.

• Gtk::Entry \* m\_entry\_bus

Text showing MIDI Buss name.

• Gtk::Button \* m\_button\_channel

Button for the MIDI Channel.

• Gtk::Entry \* m\_entry\_channel

Text for the MIDI Channel.

• Gtk::Button \* m\_button\_snap

Button for the Grid-snap menu.

• Gtk::Entry \* m\_entry\_snap

Text for selected Grid-snap.

• Gtk::Button \* m\_button\_note\_length

Button for Note-length menu.

• Gtk::Entry \* m\_entry\_note\_length

Text showing the Note-length.

• Gtk::Button \* m button zoom

Button for the Zoom menu.

• Gtk::Entry \* m\_entry\_zoom

Text for the selected Zoom.

• Gtk::Button \* m\_button\_length

Button for pattern-length.

• Gtk::Entry \* m\_entry\_length

Text for the pattern-length.

Gtk::Button \* m\_button\_key

Button for the Music Key.

Gtk::Entry \* m\_entry\_key

Text for selected Music Key.

• Gtk::Button \* m button scale

Button for the Music Scale.

• Gtk::Entry \* m\_entry\_scale

Text for the Music Scale.

• Gtk::Button \* m\_button\_chord

Button for the current Chord.

• Gtk::Entry \* m\_entry\_chord

Text for the current Chord.

• Gtk::Tooltips \* m\_tooltips

Tooltip collector for dialog.

- Gtk::Button \* m\_button\_data
  - Button for Event (data) menu.
- Gtk::Entry \* m\_entry\_data

Text for the selected Event.

• Gtk::Button \* m\_button\_bpm

Button for Beats/Measure menu.

• Gtk::Entry \* m\_entry\_bpm

Text for chosen Beats/Measure.

• Gtk::Button \* m button bw

Button for Beat-Width menu.

Gtk::Entry \* m\_entry\_bw

Text for chosen Beat-Width.

• Gtk::Button \* m button rec vol

Button for recording volume.

• Gtk::ToggleButton \* m\_toggle\_play

Pattern-to-MIDI record button.

• Gtk::ToggleButton \* m\_toggle\_record

MIDI-port-to-pattern button.

• Gtk::ToggleButton \* m\_toggle\_q\_rec

Quantized-record MIDI button.

• Gtk::ToggleButton \* m\_toggle\_thru

MIDI-to-pattern-MIDI button.

• Gtk::Entry \* m\_entry\_name

Name of the sequence.

• midibyte m\_editing\_status

Indicates what MIDI event/status the data window currently editing.

• midibyte m\_editing\_cc

Indicates what MIDI CC value the data window currently editing.

bool m\_have\_focus

Indicates that the focus has already been changed to this sequence.

### **Static Private Attributes**

- static int m\_initial\_snap
  - Static data members.

#### **Additional Inherited Members**

### 13.61.1 Detailed Description

- perform
- · segroll
- seqkeys
- · seqdata
- · seqtime
- seqevent
- sequence

This class has a metric ton of user-interface objects and other members.

### 13.61.2 Constructor & Destructor Documentation

#### 13.61.2.1 segedit()

If provided, override the scale, key, and background-sequence with the values stored in the file with the sequence, if they are set to non-default values. This is a new feature.

**Todo** Offload most of the work into an initialization function like options does.

Horizontal Gtk::Adjustment constructor: The initial value was 0 on a range from 0 to 1, with step and page increments of 1, and a page\_size of 1. We can fix these values here, or create an h\_adjustment() function similar to eventedit 
∴v\_adjustment(), which first gets called in on\_realize().

#### **Parameters**

p	The performance object of which the sequence is a part.	
seq	The sequence object this window object represents.	
pos	The sequence number (pattern slot number) for this sequence and window.	
ppqn	The optional PPQN parameter for this sequence. Warning: not really used by the caller, need to square that!	

# . .

```
seq64::seqedit::~seqedit ( ) [virtual]
```

### 13.61.3 Member Function Documentation

### 13.61.3.1 set\_zoom()

13.61.2.2  $\sim$  segedit()

It is passed to the seqroll, seqtime, seqdata, and seqevent objects, as well. This function doesn't check if the zoom will change, because this function might be used to initialize the zoom of the children.

The notation for zoom in the user-interface is in pixels:ticks, but I would prefer to use pulses/pixel (pulses per pixel). Oh well. Note that this value of zoom is saved to the "user" configuration file when Sequencer64 exit.

#### **Parameters**

z The prospective zoom value to set. It is applied only if between the minimum and maximum allowed zoom values, inclusive. See the usr().min\_zoom() and usr().max\_zoom() function.

### 13.61.3.2 set\_snap()

It is passed to the seqroll, seqevent, and sequence objects, as well.

The default initial snap is the default PPQN divided by 4, or the equivalent of a 16th note (48 ticks). The snap divisor is 192 \* 4 / 48 or 16.

#### **Parameters**

s The prospective snap value to set. It is checked only to make sure it is greater than 0, to avoid a numeric exception.

#### 13.61.3.3 set\_note\_length()

It is passed to the seqroll object, as well.

### Warning

Currently, we don't handle changes in the global PPQN after the creation of the menu. The creation of the menu hard-wires the values of note-length. To adjust for a new global PQN, we will need to store the original PPQN (m\_original\_ppqn = m\_ppqn), and then adjust the notelength based on the new PPQN. For example if the new PPQN is twice as high as 192, then the notelength should double, though the text displayed in the "Note length" field should remain the same. However, we do adjust for a non-default PPQN at startup time.

### Parameters

notelength | Provides the note length in units of MIDI pulses.

### 13.61.3.4 set\_beats\_per\_bar()

Todo Check if verification is needed at this point.

### **Parameters**

bpm Provides the BPM (beats per measure) value to set.

### 13.61.3.5 set\_beat\_width()

**Todo** Check if verification is needed at this point.

#### **Parameters**

bw

Provides the beat-width value to set.

#### 13.61.3.6 set\_transpose\_image()

#### **Parameters**

istransposable

If true, set the image to the "Transpose" icon. Otherwise, set it to the "Drum" (not transposable) icon.

### 13.61.3.7 set\_rec\_vol()

#### **Parameters**

recvol

The setting to be made, obtained from the recording-volume ("Vol") menu.

### 13.61.3.8 horizontal\_adjust()

A duplicate of the one in seqroll.

#### **Parameters**

step

Provides the step value to use for adjusting the horizontal scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_hadjust">gui\_drawingarea\_gtk2::scroll\_hadjust</a>() for more information.

### 13.61.3.9 vertical\_adjust()

A near-duplicate of the one in seqroll.

### **Parameters**

step

Provides the step value to use for adjusting the vertical scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_vadjust">gui\_drawingarea\_gtk2::scroll\_vadjust()</a> for more information.

### 13.61.3.10 horizontal\_set()

#### **Parameters**

value

The desired position. Mostly this is either 0.0 or 9999999.0 (an "infinite" value to select the start or end position.

### 13.61.3.11 vertical\_set()

#### **Parameters**

value

The desired position. Mostly this is either 0.0 or 9999999.0 (an "infinite" value to select the start or end position.

### 13.61.3.12 set\_measures()

**Todo** Check if verification is needed at this point.

### **Parameters**

lim

Provides the sequence length, in measures.

### 13.61.3.13 apply\_length()

There's an implicit "adjust-triggers = true" parameter used in sequence::set length().

Then the seqroll, seqtime, seqdata, and seqevent objects are reset().

### 13.61.3.14 get\_measures()

```
long seq64::seqedit::get_measures ( ) [private]
```

Todo Create a sequence::set\_units() function or a sequence::get\_measures() function to forward to.

### 13.61.3.15 set\_midi\_channel()

Should this change set the is-modified flag? Where should validation occur?

### **Parameters**

midichannel	The MIDI channel value to set.
user_change	True if the user made this change, and thus has potentially modified the song.

### 13.61.3.16 set\_midi\_bus()

Should this change set the is-modified flag? Where should validation against the ALSA or JACK buss limits occur?

Also, it would be nice to be able to update this display of the MIDI bus in the field if we set it from the seqmenu.

#### **Parameters**

	bus	The buss value to set.
	user change	True if the user made this change, and thus has potentially modified the song.

### 13.61.3.17 set\_scale()

It is passed to the sequence, so that it can be saved as part of the sequence data.

Note that the "initial value" for this parameter is a static variable that gets set to the new value, so that opening up another sequence causes the sequence to take on the new "initial value" as well. A feature, but should it be optional? Now it is, based on the setting of usr().global\_seq\_feature().

### 13.61.3.18 set\_chord()

It is passed to the sequence, so that it can be saved as part of the sequence data.

Note that the "initial value" for this parameter is a static variable that gets set to the new value, so that opening up another sequence causes the sequence to take on the new "initial value" as well. A feature, but should it be optional? Now it is, based on the setting of usr().global\_seq\_feature().

#### 13.61.3.20 set\_background\_sequence()

```
void seq64::seqedit::set_background_sequence (
    int seqnum ) [private]
```

As a new feature, it is also passed to the sequence, so that it can be saved as part of the sequence data, but only if less or equal to the maximum single-byte MIDI value, 127.

Note that the "initial value" for this parameter is a static variable that gets set to the new value, so that opening up another sequence causes the sequence to take on the new "initial value" as well. A feature, but should it be optional? Now it is, based on the setting of usr().global\_seq\_feature().

### 13.61.3.21 transpose\_change\_callback()

```
void seq64::seqedit::transpose_change_callback ( ) [private]

13.61.3.22 name_change_callback()

void seq64::seqedit::name_change_callback ( ) [private]
```

That name is the name the user has given to the sequence being edited.

```
13.61.3.23 play_change_callback()
void seq64::seqedit::play_change_callback ( ) [private]
13.61.3.24 record_change_callback()
void seq64::seqedit::record_change_callback ( ) [private]
Stazed:
 \label{lem:both_cond_change_callback()} \ \ \text{and} \ \ \text{thru\_change\_callback()} \ \ \text{will call}
 \operatorname{set\_sequence\_input}() for the same sequence. We only need to call it if
 it is not already set, if setting. And, we should not unset it if the
 m_toggle_thru->get_active() is true.
13.61.3.25 q rec_change_callback()
\label{local_condition} \mbox{void seq64::seqedit::q_rec_change\_callback ()} \mbox{ [private]}
13.61.3.26 thru change callback()
void seq64::seqedit::thru_change_callback ( ) [private]
Stazed:
 Both record_change_callback() and thru_change_callback() will call
 set_sequence_input() for the same sequence. We only need to call it if
 it is not already set, if setting. And, we should not unset it if the
 m_toggle_thru->get_active() is true.
13.61.3.27 undo_callback()
void seq64::seqedit::undo_callback ( ) [private]
13.61.3.28 redo_callback()
void seq64::seqedit::redo_callback ( ) [private]
13.61.3.29 set_data_type()
void seq64::seqedit::set_data_type (
              midibyte status,
              midibyte control = 0 ) [private]
```

This function uses the hardwired array c\_controller\_names.

#### **Parameters**

status	The current editing status.
control	The control value. However, we really need to validate it!

#### 13.61.3.30 update\_all\_windows()

```
void seq64::seqedit::update_all_windows ( ) [private]
```

#### 13.61.3.31 fill\_top\_bar()

```
void seq64::seqedit::fill_top_bar ( ) [private]
```

Note that, if a non-default title for the sequence is in force, then we immediately force the focus to the sequol "widget", so that the space bar can be used to control playback, instead of immediately erasing the name of the sequence. The following commented radio-buttons were a visual way to select the modes of note editing (select, draw, and grow). These can easily be done with the left mouse button, keystrokes, or some other tricks, though.

#### 13.61.3.32 create\_menus()

```
void seq64::seqedit::create_menus ( ) [private]
```

The first menu is the Zoom menu, represented in the pattern/sequence editor by a button with a magnifying glass. The values are "pixels to ticks", where "ticks" are actually the "pulses" of "pulses per quarter note". We would prefer the notation "n" instead of "1:n", as in "n pulses per pixel".

Note that many of the setups here could be loops through data structures. The Snap menu is actually the Grid Snap button, which shows two arrows pointing to a central bar. This menu somewhat duplicates the same menu in perfedit.

To reduce the amount of written code, we now use a static array to initialize some of the sequedit menu entries. 0 denotes the separator. This same setup is used to set up both the snap and note menu, since they are exactly the same. Saves a *lot* of code.

This menu lets one set the key of the sequence, and is brought up by the button with the "golden key" image on it.

This button shows a down around for the bottom half of the time signature. It's tooltip is "Time signature. Length of beat." But it is called bw, or beat width, in the code.

This menu is shown when pressing the button at the bottom of the window that has "Vol" as its label. Let's show the numbers as well to help the user. And we'll have to document this change.

This menu sets the scale to show on the panel, and the button shows a "staircase" image. See the c\_music\_scales enumeration defined in the globals module.

This section sets up two different menus. The first is m\_menu\_length. This menu lets one set the sequence length in bars. The second menu is the m\_menu\_bpm, or BPM, which here means "beats per measure" (not "beats per minute").

```
13.61.3.33 popup_menu()
```

void seq64::seqedit::popup\_event\_menu ( ) [private]

This menu has a large number of items. I think they are filled in in code, but can also be loaded from  $\sim$ /.seq24usr. To be determined. Create the 8 sub-menus for the various ranges of controller changes, shown 16 per sub-menu.

```
13.61.3.35 popup_midibus_menu()
void seq64::seqedit::popup_midibus_menu ( ) [private]
```

The MIDI busses are obtained by getting the mastermidibus object, and iterating through the busses that it contains.

```
13.61.3.36 popup_sequence_menu()
void seq64::seqedit::popup_sequence_menu ( ) [private]
```

It is populated with an "Off" menu entry, and a second "[0]" menu entry that pulls up a drop-down menu of all of the patterns/sequences that are present in the MIDI file for screen-set 0. If more screensets have active sequences, then their screen-set number appears in the screen-set section of the menu.

Now, at present, we can only save background sequence numbers that are less than 128, which means the sequences from 0 to 127, or the first four screen sets. Higher sequences can be selected, but, right now, they cannot be saved. We'll probably fix that at some point, low priority.

```
13.61.3.37 popup_tool_menu()
void seq64::seqedit::popup_tool_menu ( ) [private]
```

This button shows three sub-menus that need to be filled in by this function. All the functions accessed here seem to be implemented by the do\_action() function.

### 13.61.3.40 timeout()

```
bool seq64::seqedit::timeout ( ) [private]
```

Note the new call to seqroll::follow\_progress(). This allows the seqroll to pop to the next frame of events to continue to show the moving progress bar. Does this need to be an option? It only affects patterns longer than a measure or two, whatever the width of the seqroll window is. This is a new feature that is not in seq24.

What about seqtime? That doesn't change.

### 13.61.3.41 do\_action()

Note that the push\_undo() calls push all of the current events (in sequence::m\_events) onto the stack (as a single entry).

### 13.61.3.42 mouse\_action()

### 13.61.3.43 start\_playing()

```
void seq64::seqedit::start_playing ( ) [private]
```

### 13.61.3.44 stop\_playing()

```
void seq64::seqedit::stop_playing ( ) [private]
```

### 13.61.3.45 change\_focus()

Similar to the same function in eventedit.

### **Parameters**

set⊷	If true (the default value), indicates we want focus, otherwise we want to give up focus.
it	

```
13.61.3.46 handle_close()
void seq64::seqedit::handle_close ( ) [private]
13.61.3.47 on_realize()
void seq64::seqedit::on_realize ( ) [private]
13.61.3.48 on_set_focus()
void seq64::seqedit::on_set_focus (
             Widget * focus ) [private]
Only works in certain circumstances.
13.61.3.49 on_focus_in_event()
bool seq64::seqedit::on_focus_in_event (
             GdkEventFocus * ) [private]
13.61.3.50 on_focus_out_event()
bool seq64::seqedit::on\_focus\_out\_event (
             GdkEventFocus * ) [private]
13.61.3.51 on_delete_event()
bool seq64::seqedit::on_delete_event (
```

It tells the sequence to stop recording, tells the perform object's mastermidibus to stop processing input, and sets the sequence object's editing flag to false.

### Warning

This function also calls "delete this"!

GdkEventAny \* event ) [private]

### Returns

Always returns false.

#### 13.61.3.52 on\_scroll\_event()

This handles moving the scroll wheel on a mouse or do a two-fingered scrolling action on a touchpad. If no modifier key is pressed, this moves the view up or down on the "notes" coordinate, showing different piano keys. This behavior is implemented in seqkeys::on scroll event(), and is called into play by returning false here.

If the Ctrl key is pressed, then the scrolling action causes the view to zoom in or out. This behavior is implemented here.

If the Shift key is pressed, then the scrolling action moves the view horizontally on the time-line (measures-line) of the piano roll. This behavior is implemented here.

```
13.61.3.53 on_key_press_event()
```

A number of new keystrokes are processed, so that we can lessen the reliance on the mouse and work a little faster.

```
Ctrl-W keypress. This keypress closes the sequence/pattern editor window by way of calling on_delete_event(). We could apply this convention to all the other windows.
z 0 Z zoom keys. "z" zooms out, "Z" (Shift-z) zooms in, and "0" resets the zoom to the default.
Page-Up and Page-Down. Moves up and down in the piano roll.
Home and End. Page to the top or the bottom of the piano roll.
Shift-Page-Up and Shift-Page-Down. Move left and right in the piano roll.
Shift-Home and Shift-End. Page to the start or the end of the piano roll.
Ctrl-Page-Up and Ctrl-Page-Down. Mirrors the zoom-in and zoom-out capabilities of scrolling up and down with the mouse while the Ctrl key is pressed.
```

The Keypad-End key is an issue on our ASUS "gaming" laptop. Whether it is seen as a "1" or an "End" key depends on an interaction between the Shift and the Num Lock key. Annoying, takes some time to get used to.

Change Note layk 2016-10-17 Issue #46. Undoing (ctrl-z) removes two instances of history. To reproduce this bug, if one makes three notes one at a time and presses ctrl-z once only the first one remains. Same goes for moving notes. This is due to this else-if statement where we call seqroll::on\_key\_press\_event() making first removal. This if statement is never true and seqroll::on\_key\_press\_event() is called again as Gtk::Window::on\_key\_press\_event(), making another m\_seq.pop\_undo() in seqroll. Note that the code here was an (ill-advised) attempt to avoid the pattern title field from grabbing the initial keystrokes; better to just get used to clicking the piano roll first. Finally, fixing the undo bug also let's ctrl-page-up/page-down change the zoom. Lastly, we've removed the undo here... seqroll already handles both undo and redo keystrokes.

Change Note ca 2016-10-18 Issue #46. In addition to layk's fixes, we have to properly determine if we're inside the "Sequence Name" ("GtkEntry") field, as opposed to the "GtkDrawingArea" field, to avoid grabbing and using keystrokes intended for the text-entry field. We may have to rethink the whole seqroll vs. seqedit key-press process at some point, as this is a bit too tricky. Please note that the name "gtkmm\_\_GtkEntry" likely applies only to GNU's C++ compiler, g++. This will be an issue in any port to Microsoft's C++ compiler.

### **Parameters**

ev | Provides the keystroke event to be handled.

#### Returns

Returns true if we handled the keystroke here. Otherwise, returns the value of Gtk::Window::on\_key\_press-event(ev).

#### 13.61.4 Field Documentation

#### 13.61.4.1 segmenu

```
friend seq64::seqedit::seqmenu [private]
```

### 13.61.4.2 m\_initial\_snap

```
int seq64::seqedit::m_initial_snap [static], [private]
```

These items apply to all of the instances of seqedit, and are passed on to the following constructors:

- seqdata
- · seqevent
- · segroll
- · seqtime

The snap and note-length defaults would be good to write to the "user" configuration file. The scale and key would be nice to write to the proprietary section of the MIDI song. Or, even more flexibly, to each sequence, if that makes sense to do, since all tracks would generally be in the same key. Right, Charles Ives?

Note that, currently, that some of these "initial values" are modified, so that they are "contagious". That is, the next sequence to be opened in the sequence editor will adopt these values. This is a long-standing feature of Seq24, but strikes us as a bit surprising.

Change Note ca 2016-04-10 If we just double the PPQN, then the snap divisor becomes 32, and the snap interval is a 32nd note. We would like to keep it at a 16th note. We correct the snap ticks to the actual PPQN ratio.

### 13.61.4.3 m\_initial\_note\_length

```
int seq64::seqedit::m_initial_note_length [static], [private]
```

### 13.61.4.4 m initial chord

13.61.4.42 m_seqtime_wid
seqtime* seq64::seqedit::m_seqtime_wid [private]
This is the location where the measure numbers and the END marker are shown.
13.61.4.43 m_segdata_wid
seqdata* seq64::seqedit::m_seqdata_wid [private]
This is the area at the bottom of the window that shows value lines for the selected kinds of events.
13.61.4.44 m_seqevent_wid
seqevent* seq64::seqedit::m_seqevent_wid [private]
```

```
13.61.4.45 m_seqroll_wid
seqroll* seq64::seqedit::m_seqroll_wid [private]
13.61.4.46 m_button_lfo
Gtk::Button* seq64::seqedit::m_button_lfo [private]
This item will always be an optional part of the build, enabled by defining SEQ64_STAZED_LFO_SUPPORT.
13.61.4.47 m_lfo_wnd
lfownd* seq64::seqedit::m_lfo_wnd [private]
This item get the seqdata window hooked into it, and so must follow that item in the C++ initializer list.
13.61.4.48 m_table
Gtk::Table* seq64::seqedit::m_table [private]
These items provide a number of buttons and text-entry fields, as well as their layout. The layout table for editor.
13.61.4.49 m_vbox
Gtk::VBox* seq64::seqedit::m_vbox [private]
13.61.4.50 m_hbox
Gtk::HBox* seq64::seqedit::m_hbox [private]
13.61.4.51 m_hbox2
Gtk::HBox* seq64::seqedit::m_hbox2 [private]
13.61.4.52 m_button_undo
Gtk::Button* seq64::seqedit::m_button_undo [private]
13.61.4.53 m_button_redo
```

Gtk::Button\* seq64::seqedit::m\_button\_redo [private]

```
13.61.4.54 m_button_quantize
Gtk::Button* seq64::seqedit::m_button_quantize [private]
13.61.4.55 m_button_tools
Gtk::Button* seq64::seqedit::m_button_tools [private]
13.61.4.56 m_button_sequence
Gtk::Button* seq64::seqedit::m_button_sequence [private]
13.61.4.57 m_entry_sequence
Gtk::Entry* seq64::seqedit::m_entry_sequence [private]

bool seq64::seqedit::m_have_focus [private]
```

## 13.62 seq64::seqevent Class Reference

Implements the piano event drawing area.

Inheritance diagram for seq64::seqevent:

### **Public Member Functions**

• seqevent (perform &p, sequence &seq, int zoom, int snap, seqdata &seqdata\_wid, Gtk::Adjustment &hadjust, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

Principal constructor.

virtual ∼seqevent ()

Let's provide a do-nothing virtual destructor.

· void reset ()

This function basically resets the whole widget as if it was realized again.

• void redraw ()

Adjusts the scrolling offset for ticks, updates the pixmap, and draws it on the window.

void set zoom (int zoom)

Sets zoom to the given value, and resets if the value ended up being changed.

void set\_snap (int snap)

'Setter' function for member m\_snap Simply sets the snap member.

void set\_data\_type (midibyte status, midibyte control)

Sets the status to the given parameter, and the CC value to the given optional control parameter, which defaults to 0.

void update\_sizes ()

If the window is realized, this function creates a pixmap with window dimensions, the updates the pixmap, and queues up a redraw.

void draw\_background ()

This function updates the background.

void draw\_events\_on\_pixmap ()

This function fills the main pixmap with events.

void draw\_pixmap\_on\_window ()

This function currently just queues up a draw operation for the pixmap.

void draw\_selection\_on\_window ()

Draw the selected events on the window.

void update\_pixmap ()

Redraws the background pixmap on the main pixmap, then puts the events on.

### **Private Member Functions**

virtual void force\_draw ()

Forces a draw on the current drawable area of the window.

• int idle\_redraw ()

Implements redraw while idling.

void x\_to\_w (int x1, int x2, int &x, int &w)

This function checks the mins / maxes.

void drop\_event (midipulse tick)

Drops (adds) an event at the given tick.

void draw\_events\_on (Glib::RefPtr< Gdk::Drawable > draw)

Draws events on the given drawable object.

• void start\_paste ()

Starts a paste operation.

• void change\_horz ()

Changes the horizontal scrolling offset for ticks, then updates the pixmap and forces a redraw.

void convert x (int x, midipulse &tick)

Takes the screen x coordinate, multiplies it by the current zoom, and returns the tick value in the given parameter.

void convert\_t (midipulse tick, int &x)

Converts the given tick value to an x corrdinate, based on the zoom, and returns it via the second parameter.

void snap y (int &y)

This function performs a 'snap' on y.

void snap\_x (int &x)

This function performs a 'snap' on x.

• void on\_realize ()

Implements the on-realize callback.

bool on\_expose\_event (GdkEventExpose \*ev)

Implements the on-expose event callback.

bool on\_button\_press\_event (GdkEventButton \*ev)

Implements the on-button-press event callback.

bool on\_button\_release\_event (GdkEventButton \*ev)

Implements the on-button-release event callback.

bool on\_motion\_notify\_event (GdkEventMotion \*ev)

Implements the on-motion-notify event callback.

bool on\_focus\_in\_event (GdkEventFocus \*)

Responds to a focus event by setting the HAS\_FOCUS flag.

bool on\_focus\_out\_event (GdkEventFocus \*)

Responds to a unfocus event by resetting the HAS\_FOCUS flag.

bool on\_key\_press\_event (GdkEventKey \*p0)

Implements the key-press event callback function.

void on\_size\_allocate (Gtk::Allocation &)

Implements the on-size-allocate event callback.

### **Private Attributes**

FruitySeqEventInput m fruity interaction

Provides the mouse-handling paradigm for the fruity interaction.

Seq24SeqEventInput m\_seq24\_interaction

Provides the normal mouse-handling for Sequencer64.

• sequence & m\_seq

Provides a reference to the sequence whose data is represented in this sequent object.

• int m zoom

Zoom setting, means that one pixel  $== m_zoom ticks$ .

int m\_snap

The grid-snap setting for the event bar grid.

• int m\_ppqn

The value to use for the PPQN for this sequence.

GdkRectangle m\_old

Used in drawing the event selection in the thing event row.

• GdkRectangle m\_selected

Used in moving and pasting the selected events in the thin event row.

int m\_scroll\_offset\_ticks

Provides the offset of the ticks in the event view based on where the scroll-bar has moved the view "window".

int m\_scroll\_offset\_x

Provides the offset of the pixels in the event view based on where the scroll-bar has moved the view "window".

· seqdata & m\_seqdata\_wid

The data view that parallels this event view.

bool m\_selecting

Used when highlighting a bunch of events.

· bool m moving init

Used externally by the fruityseq and seq24seq modules, to initialize the act of moving events.

bool m\_moving

Indicates that this pane is in the act of moving a selection.

· bool m\_growing

Used externally by the fruityseq and seq24seq modules, when growing the event duration.

· bool m\_painting

Used externally by the fruityseq and seq24seq modules, in painting the selected events.

· bool m\_paste

Indicates that we've selected some events and are in paste mode.

• int m\_move\_snap\_offset\_x

Used externally by the fruityseq and seq24seq modules, in snapping.

• midibyte m\_status

Indicates what is the data window currently editing.

• midibyte m\_cc

Indicates what is the data window currently editing.

### **Friends**

- struct FruitySeqEventInput
- struct Seq24SeqEventInput

### **Additional Inherited Members**

### 13.62.1 Constructor & Destructor Documentation

### 13.62.1.1 seqevent()

```
seq64::seqevent::seqevent (
    perform & p,
    sequence & seq,
    int zoom,
    int snap,
    seqdata & seqdata_wid,
    Gtk::Adjustment & hadjust,
    int ppqn = SEQ64_USE_DEFAULT_PPQN )
```

### **Parameters**

р	The "parent" perform object controlling all of the sequences.
seq	The current sequence operated on by this object.
zoom	The initial zoom value.
snap	The initial snap value.
seqdata_wid	The data pane that this event pane is associated with.
hadjust	The horizontal scroll-bar.
ppqn	The initial PPQN value.

### 13.62.1.2 ∼seqevent()

```
\label{eq:continuous} \mbox{virtual seq64::seqevent::} \sim \mbox{seqevent ( ) [inline], [virtual]}
```

# 13.62.2 Member Function Documentation

## **Parameters**

z The desired zoom value, assumed to be validated already. See the seqedit::set\_zoom() function.

# 13.62.2.4 set\_snap()

The parameter is not validated.

# 13.62.2.5 set\_data\_type()

Then redraws.

# **Parameters**

status	The status/event byte to set. For example, EVENT_NOTE_ON and EVENT_NOTE off. This byte should have the channel nybble cleared.
control	The MIDI CC byte to set.

```
13.62.2.6 update_sizes()
void seq64::seqevent::update_sizes ( )
```

This ends up filling the background with dotted lines, etc.

```
13.62.2.7 draw_background()
void seq64::seqevent::draw_background ( )
```

It sets the foreground to white, draws the rectangle, in order to clear the pixmap. The build-time option SEQ64← \_SOLID\_PIANOROLL\_GRID causes solid lines to be drawn, in gray, instead of dotted black lines, for a smoother look.

Also, as a trial option, if the current data type is EVENT\_NOTE\_ON, EVENT\_NOTE\_OFF, and EVENT\_AFTER TOUCH, we draw the background in light grey to remind the user that there are issues in copying or moving these events around (unlinked) by themselves.

```
13.62.2.8 draw_events_on_pixmap()

void seq64::seqevent::draw_events_on_pixmap ( )

13.62.2.9 draw_pixmap_on_window()

void seq64::seqevent::draw_pixmap_on_window ( )

Old comments:

It then tells event to do the same. We changed something on this window, and chances are we need to update the event widget as well and update our velocity window.

13.62.2.10 draw_selection_on_window()

void seq64::seqevent::draw_selection_on_window ( )

13.62.2.11 update_pixmap()

void seq64::seqevent::update_pixmap ( )

13.62.2.12 force_draw()

void seq64::seqevent::force_draw ( ) [private], [virtual]
```

Reimplemented from seq64::gui\_drawingarea\_gtk2.

```
13.62.2.13 idle_redraw()
```

```
int seq64::seqevent::idle_redraw ( ) [private]
```

Who calls this routine? Probably the default timer routine, but not sure.

## Returns

Always returns true.

# 13.62.2.14 x\_to\_w()

Then it fills in x and the width.

## **Parameters**

	x1	The "left" x value.	
x2 The "right" x value.			
out	Х	The destination for the converted x value.	
out w The destination for the converted width v		The destination for the converted width value.	

# 13.62.2.15 drop\_event()

It sets the first byte properly for after-touch, program-change, channel-pressure, and pitch-wheel. The type of event is determined by m\_status.

# **Parameters**

tick The destination time (division, pulse, tick) for the event to be dropped at.

# 13.62.2.16 draw\_events\_on()

Very similar to seqdata::draw\_events\_on().

#### **Parameters**

drawable The given drawable object.	
-------------------------------------	--

# 13.62.2.17 start\_paste()

```
void seq64::seqevent::start_paste ( ) [private]
```

It gets the clipboard box that selected elements are in, makes a coordinate conversion, and then, sets the  $m_{\leftarrow}$  selected rectangle to hold the (x,y,w,h) of the selected events.

# 13.62.2.18 change\_horz()

```
void seq64::seqevent::change_horz ( ) [private]
```

Very similar to seqroll::change\_horz(). Basically identical to seqdata::change\_horz().

# 13.62.2.19 convert\_x()

Why not just return it normally?

# **Parameters**

	X	The x (pixel) value to convert.
out	tick	The destination for the converted x value.

# 13.62.2.20 convert\_t()

Why not just return it normally?

#### **Parameters**

	tick	The tick (pulse) value to convert.
out	X	The destination for the converted tick value.

# 13.62.2.21 snap\_y()

```
void seq64::seqevent::snap_y (
          int & y ) [inline], [private]
```

#### **Parameters**

out	у	The return parameter for the conversion. Why not just return the value?
-----	---	---

# 13.62.2.22 snap\_x()

- snap = number pulses to snap to
- m\_zoom = number of pulses per pixel
- Therefore snap / m\_zoom = number of pixels to snap to.

#### **Parameters**

```
out x The output destination for the snapped x value.
```

# 13.62.2.23 on\_realize()

```
void seq64::seqevent::on_realize ( ) [private]
```

It calls the base-class version, and then allocates additional resource not allocated in the constructor. Finally, it connects up the change\_horz function.

# 13.62.2.24 on\_expose\_event()

#### **Parameters**

```
ev The expose event.
```

## 13.62.2.25 on\_button\_press\_event()

It distinguishes between the Seq24 and Fruity varieties of mouse interaction.

Odd. In the legacy code, each case fell through to the next case to the "default" case! We will assume for now that this is incorrect.

Note that returning "true" from a Gtkmm event-handler stops the propagation of the event to higher-level widgets. The Fruity and Seq24 event handlers return true, always. In the legacy code, though, the fall-through code caused false to be returned, always. Not sure what effect this had. Added some fixes, but then commented them out until better testing can be done.

#### **Parameters**

```
ev The button event.
```

## Returns

Returns true if the button-press was handled.

## 13.62.2.26 on\_button\_release\_event()

It distinguishes between the Seq24 and Fruity varieties of mouse interaction.

Odd. The fruity case fell through to the Seq24 case. We will assume for now that this is correct. Added some fixes, but then commented them out until better testing can be done.

# **Parameters**

```
ev The button event.
```

# Returns

Returns true if the button-press was handled.

# 13.62.2.27 on\_motion\_notify\_event()

It distinguishes between the Seq24 and Fruity varieties of mouse interaction.

Odd. The fruity case fell through to the Seq24 case. We will assume for now that this is correct. Added some fixes, but then commented them out until better testing can be done.

#### **Parameters**

#### Returns

Returns true if the motion-event was handled.

```
13.62.2.28 on_focus_in_event()
```

Parameter "ev" is the focus event, unused.

#### Returns

Always returns false.

# 13.62.2.29 on\_focus\_out\_event()

Parameter "ev" is the focus event, unused.

## Returns

Always returns false.

# 13.62.2.30 on\_key\_press\_event()

It handles deleted a selection via the Backspace or Delete keys, cut via Ctrl-X, copy via Ctrl-C, paste via Ctrl-V, and undo via Ctrl-Z.

Would be nice to provide redo functionality via Ctrl-Y. :-)

# **Parameters**

```
ev The key-press event.
```

# Returns

Returns true if an event was handled. Only some of the handled events also cause the perform modification flag to be set as a side-effect.

# 13.62.2.31 on\_size\_allocate()

The m\_window\_x and m\_window\_y values are set to the allocation width and height, respectively.

# **Parameters**

```
a The allocation to be processed.
```

# 13.62.3 Friends And Related Function Documentation

# 13.62.3.1 FruitySeqEventInput

```
friend struct FruitySeqEventInput [friend]
```

# 13.62.3.2 Seq24SeqEventInput

```
friend struct Seq24SeqEventInput [friend]
```

## 13.62.4 Field Documentation

## 13.62.4.1 m\_fruity\_interaction

```
FruitySeqEventInput seq64::seqevent::m_fruity_interaction [private]
```

Why should we need both at the same time? Just load the one that is specified in the configuration.

```
13.62.4.2 m_seq24_interaction
```

```
Seq24SeqEventInput seq64::seqevent::m_seq24_interaction [private]
```

```
13.62.4.3 m_seq
```

```
sequence& seq64::seqevent::m_seq [private]
```

# 13.62.4.4 m\_zoom

```
int seq64::seqevent::m_zoom [private]
```

# 13.62.4.5 m\_snap

```
int seq64::seqevent::m_snap [private]
```

Same meaning as for the piano roll. This value is the denominator of the note size used for the snap.

```
13.62.4.6 m_ppqn
int seq64::seqevent::m_ppqn [private]
Used in snap and zoom scaling.
13.62.4.7 m_old
GdkRectangle seq64::seqevent::m_old [private]
13.62.4.8 m_selected
GdkRectangle seq64::seqevent::m_selected [private]
13.62.4.9 m_scroll_offset_ticks
int seq64::seqevent::m_scroll_offset_ticks [private]
13.62.4.10 m_scroll_offset_x
int seq64::seqevent::m_scroll_offset_x [private]
Set to m_scroll_offset_ticks divided by m_zoom.
13.62.4.11 m_seqdata_wid
seqdata& seq64::seqevent::m_seqdata_wid [private]
13.62.4.12 m_selecting
bool seq64::seqevent::m_selecting [private]
13.62.4.13 m_moving_init
bool seq64::seqevent::m_moving_init [private]
13.62.4.14 m_moving
bool seq64::seqevent::m_moving [private]
```

WARNING: This operation seems to have a bug. It makes the events very very long. This bug exists in Seq24.

```
13.62.4.15 m_growing
bool seq64::seqevent::m_growing [private]
Does growing work in this view? Need to do some better testing.
13.62.4.16 m_painting
bool seq64::seqevent::m_painting [private]
13.62.4.17 m_paste
bool seq64::seqevent::m_paste [private]
13.62.4.18 m_move_snap_offset_x
int seq64::seqevent::m_move_snap_offset_x [private]
13.62.4.19 m_status
midibyte seq64::seqevent::m_status [private]
The current status/event byte.
13.62.4.20 m_cc
```

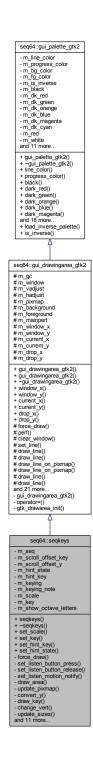

The current MIDI CC value.

midibyte seq64::seqevent::m\_cc [private]

# 13.63 seq64::seqkeys Class Reference

This class implements the left side piano of the pattern/sequence editor.

Inheritance diagram for seq64::seqkeys:

# **Public Member Functions**

• seqkeys (sequence &seq, perform &p, Gtk::Adjustment &vadjust)

Principal constructor.

virtual ∼seqkeys ()

Let's provide a do-nothing virtual destructor.

void set scale (int scale)

Sets the musical scale, then resets.

void set\_key (int key)

Sets the musical key, then resets.

void set\_hint\_key (int key)

Sets a key to grey so that it can serve as a scale hint.

• void set\_hint\_state (bool state)

Sets the hint state to the given value.

## **Private Member Functions**

virtual void force\_draw ()

Forces a draw operation on the whole window.

void set listen button press (GdkEventButton \*ev)

Sneaky accessors for the segroll friend.

- void set\_listen\_button\_release (GdkEventButton \*ev)
- void set\_listen\_motion\_notify (GdkEventMotion \*ev)
- · void draw\_area ()

Draws the updated pixmap on the drawable area of the window where the keys' location is hardwired.

void update pixmap ()

Updates the pixmaps to prepare it for the next draw operation.

void convert\_y (int y, int &note)

Takes the screen y coordinate, and returns the note value in the second parameter.

void draw\_key (int key, bool state)

Draws the given key according to the given state.

void change\_vert ()

Changes the y offset of the scrolling, and the forces a draw.

- void update\_sizes ()
- void reset ()

Resetting the keys view updates the pixmap and queues up a draw operation.

• bool is\_black\_key (int key) const

Detects a black key.

• void on\_realize ()

Implements the on-realize event.

• bool on\_expose\_event (GdkEventExpose \*ev)

Implements the on-expose event, by drawing on the window.

bool on\_button\_press\_event (GdkEventButton \*ev)

Implements the on-button-press event callback.

• bool on\_button\_release\_event (GdkEventButton \*ev)

Implements the on-button-release event callback.

bool on\_motion\_notify\_event (GdkEventMotion \*p0)

Implements the on-motion-notify event handler.

bool on\_enter\_notify\_event (GdkEventCrossing \*p0)

Implements the on-enter notification event handler.

bool on\_leave\_notify\_event (GdkEventCrossing \*p0)

Implements the on-leave notification event handler.

bool on\_scroll\_event (GdkEventScroll \*ev)

Implements the on-scroll-event notification event handler.

void on\_size\_allocate (Gtk::Allocation &)

Implements the on-size-allocation notification event handler.

## **Private Attributes**

• sequence & m\_seq

The sequence object that the keys pane will be using.

int m\_scroll\_offset\_key

Provides the value of the current top key in the keys pane.

int m\_scroll\_offset\_y

Provides the value of the current top key in the keys pane in units of relative pixels.

bool m\_hint\_state

Indicates if a piano key is set to indicate where on the pitch scale the mouse cursor is sitting.

int m\_hint\_key

Indicates the current y-value of the mouse pointer in units of key value.

bool m\_keying

Set to true while the left mouse button is being pressed.

• int m\_keying\_note

The note to be played when selected in the seqkeys pane.

• int m scale

This member holds the scale value for the musical scale for the current edit of the sequence.

int m key

This member holds the key value for the musical key for the current edit of the sequence.

• bool m\_show\_octave\_letters

The default value is to show the octave letters on the vertical virtual keyboard.

# **Additional Inherited Members**

# 13.63.1 Detailed Description

Note the friends of this class, seqroll and FruitySeqRollInput. Where is Seq24SeqRollInput? Gone. It has been folded back into seqroll.

#### 13.63.2 Constructor & Destructor Documentation

#### 13.63.2.1 seqkeys()

# **Parameters**

seq	Provides the sequence object to which this seqkeys pane is associated.	
p	Provides the performance object to which this seqkeys pane (and all sequences) are associate	
vadjust The range object for the vertical scrollbar linked to the position in the seqkeys pane.		

```
13.63.2.2 \sim seqkeys()
```

```
virtual seq64::seqkeys::\simseqkeys ( ) [inline], [virtual]
```

# 13.63.3 Member Function Documentation

```
13.63.3.1 set_scale()
```

This function is called by the seqedit class.

#### **Parameters**

scale	The musical scale value to be set.

# 13.63.3.2 set\_key()

## **Parameters**

key The musical key value to be set.

# 13.63.3.3 set\_hint\_key()

If m\_hint\_state is true, the key is drawn (again).

# **Parameters**

key The key value to set the hint-key to.

# 13.63.3.4 set\_hint\_state()

```
void seq64::seqkeys::set_hint_state (
          bool state )
```

#### **Parameters**

*state* Provides the value for hinting, where true == on, false == off.

```
13.63.3.5 force_draw()
```

void seq64::seqkeys::force\_draw ( ) [private], [virtual]

Unlike most other overridden versions of force draw(), this one does not call the base-class version.

Reimplemented from seq64::gui drawingarea gtk2.

```
13.63.3.6 set_listen_button_press()
```

From the stazed code.

#### **Parameters**

ev The event to be forwarded from the seqroll.

#### 13.63.3.7 set listen\_button\_release()

This function draws the keys, which range from 0 to 127 (SEQ64\_MIDI\_COUNT\_MAX - 1 =  $c_num_keys - 1$ ). Every octave, a key letter and number (e.g. "C4") is shown. The letter is adjusted to match the current scale (e.g. "C#4").

We want to support an option to show the key number rather than the note letter/number combination, and perhaps to toggle between them. The current difficulty is that the fonts used are just a little to high to fit within the vertical limits of each key. We really don't want to change the vertical size at this time, so we just print every other note value.

Also note that this algorithm draws from the top down, so we have to account for that.

# 13.63.3.11 convert\_y()

#### **Parameters**

	У	The y (vertical) screen coordinate to convert.	
out	note	The destination for the note calculation. This would be better as a return value.	

# 13.63.3.12 draw\_key()

It accounts for the black keys and the white keys, and for the highlighting of the active key.

#### **Parameters**

key	The key to be drawn.	
state	How the key is to be drawn, where false == normal, true == grayed. A key is greyed when the mouse	
	cursor is at the same vertical location on the piano as the key.	

# 13.63.3.13 change\_vert()

```
void seq64::seqkeys::change_vert ( ) [private]
```

Weird, in seq24 and here, the following was used, completely by accident! We fixed it, but must beware!

```
m_scroll_offset_y = m_scroll_offset_key * c_key_y, // comma operator!!!
force_draw();
```

# 13.63.3.14 update\_sizes()

```
void seq64::seqkeys::update_sizes ( ) [private]
```

# 13.63.3.15 reset()

```
void seq64::seqkeys::reset ( ) [private]
```

# 13.63.3.16 is\_black\_key()

#### **Parameters**

key The key	to analyze.
-------------	-------------

#### Returns

Returns true if the key is black (value 1, 3, 6, 8, or 10).

```
13.63.3.17 on_realize()
void seq64::seqkeys::on_realize ( ) [private]
```

Call the base-class version and then allocates resources that could not be allocated in the constructor. It connects the change\_vert() function and then calls it.

#### **Parameters**

ev The expose-event object.

## 13.63.3.19 on\_button\_press\_event()

It handles the left and right buttons. The left button, pressed on the piano keyboard, causes m\_keying to be set to true, and the given note to play. The right button toggles the note display between letter/number and MIDI note number.

#### **Parameters**

```
ev The mouse-button event to use.
```

# Returns

Always returns true.

# 13.63.3.20 on\_button\_release\_event()

It currently handles only the left button, and only if m\_keying is true.

This function is used after pressing on one of the keys on the left-side piano keyboard, to make it play, and turns off the playing of the note.

#### **Parameters**

```
ev The button-event.
```

## Returns

Always returns true.

# 13.63.3.21 on\_motion\_notify\_event()

This allows rolling down the keyboard, playing the notes one-by-one.

#### **Parameters**

```
p0 The motion event.
```

# Returns

Always returns false.

# 13.63.3.22 on\_enter\_notify\_event()

This greys the current key.

# 13.63.3.23 on\_leave\_notify\_event()

This un-greys the current key and stops playing the note.

```
13.63.3.24 on_scroll_event()
```

Note that there is no usage of the modifier keys (e.g. Shift or Ctrl). Compare this function to seqedit::on\_scroll\_\cdot event().

#### **Parameters**

```
ev Provides the direction of the scroll event.
```

# Returns

Always returns true.

## 13.63.3.25 on\_size\_allocate()

#### **Parameters**

all Provies the allocation and its width and height.

# 13.63.4 Friends And Related Function Documentation

```
13.63.4.1 segroll
```

```
friend class seqroll [friend]
```

# 13.63.4.2 FruitySeqRollInput

```
friend class FruitySeqRollInput [friend]
```

## 13.63.5 Field Documentation

```
13.63.5.1 m_seq
```

```
sequence& seq64::seqkeys::m_seq [private]
```

## 13.63.5.2 m\_scroll\_offset\_key

```
int seq64::seqkeys::m_scroll_offset_key [private]
```

Modified in change\_vert().

# 13.63.5.3 m\_scroll\_offset\_y

```
int seq64::seqkeys::m_scroll_offset_y [private]
```

Modified in change\_vert().

```
13.63.5.4 m_hint_state
bool seq64::seqkeys::m_hint_state [private]
13.63.5.5 m_hint_key
int seq64::seqkeys::m_hint_key [private]
13.63.5.6 m_keying
bool seq64::seqkeys::m_keying [private]
Used in playing the sound for each note as it is clicked in the seqkeys pane.
13.63.5.7 m_keying_note
int seq64::seqkeys::m_keying_note [private]
13.63.5.8 m_scale
int seq64::seqkeys::m_scale [private]
13.63.5.9 m_key
```

# 13.63.5.10 m\_show\_octave\_letters

int seq64::seqkeys::m\_key [private]

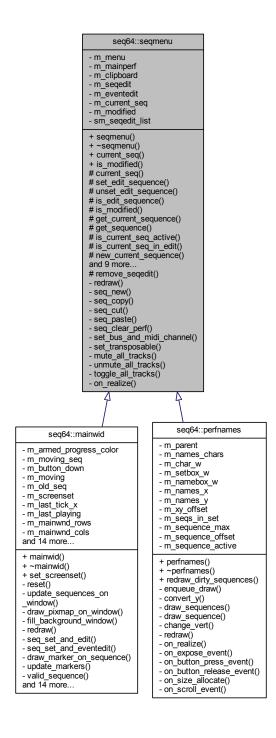

bool seq64::seqkeys::m\_show\_octave\_letters [private]

If false, then the MIDI key numbers are shown instead. This is a new feature of Sequencer64.

# 13.64 seq64::seqmenu Class Reference

This class handles the right-click menu of the sequence slots in the pattern window.

Inheritance diagram for seq64::seqmenu:

# **Public Member Functions**

seqmenu (perform &a\_p)

Principal constructor.

virtual ∼segmenu ()

Provides a rote base-class destructor.

• int current\_seq () const

'Getter' function for member m\_current\_seq We're changing the name, so that "seq" indicates an integer by (an imperfect) convention.

• bool is\_modified () const

'Getter' function for member m\_modified

## **Protected Member Functions**

void current\_seq (int seq)

'Setter' function for member m\_current\_seq

void set\_edit\_sequence (int seqnum)

'Setter' function for member m\_edit\_sequence Pass in -1 to disable the edit-sequence number.

void unset\_edit\_sequence (int seqnum)

'Setter' function for member m\_edit\_sequence Disable the edit-sequence number if it matches the parameter.

bool is\_edit\_sequence (int seqnum) const

'Getter' function for member m\_edit\_sequence Tests the parameter against m\_edit\_sequence.

void is\_modified (bool flag)

'Setter' function for member m\_modified

• sequence \* get current sequence () const

'Getter' function for member m\_mainperf.get\_sequence(current\_seq()) This call is used many, many times, and well worth wrapping.

sequence \* get\_sequence (int seqnum) const

Forwards the get-sequence call to the perform object.

bool is\_current\_seq\_active () const

Forwards the is-sequence-active check to the perform object.

bool is\_current\_seq\_in\_edit () const

Forwards the is-sequence-in-edit check to the perform object.

void new\_current\_sequence ()

Forwards the new-current-sequence call to the perform object.

void new\_sequence (int seqnum)

Forwards the new-sequence call to the perform object.

void delete\_current\_sequence ()

Forwards the delete-sequence call to the perform object.

void toggle\_current\_sequence ()

Forwards the sequence-playing-toggle call to the perform object.

void popup\_menu ()

This function sets up the pattern menu entries.

• void seq edit ()

This menu callback launches the sequence-editor (pattern editor) window.

void seq\_event\_edit ()

This menu callback launches the new event editor window.

seqedit \* create\_seqedit (sequence &s)

A wrapper function so that we can not only create a new seqedit object, but have some management over it.

virtual void seq\_set\_and\_edit (int seqnum)

Sets the current sequence and then acts as if the user had clicked on its slot.

virtual void seq\_set\_and\_eventedit (int seqnum)

Sets the current sequence and then acts as if the user had right-clicked on its slot and selected "Event Edit".

## **Static Protected Member Functions**

static void remove\_seqedit (sequence &s)

A wrapper function to make sure the seqedit object is removed from the list when it goes away.

# **Private Types**

typedef std::map< int, seqedit \* > SeqeditMap

An easy type definition for a map of sequent pointers keyed by the sequence number.

typedef std::pair< int, seqedit \* > SeqeditPair

A pair to make an entry to add to the seqedit map.

typedef std::map< int, seqedit \* >::iterator iterator

An iterator for the seqedit map.

typedef std::map< int, seqedit \* >::const\_iterator const\_iterator

A const iterator for the seqedit map.

# **Private Member Functions**

- virtual void redraw (int a\_sequence)=0
- void seq\_new ()

This function sets the new sequence into the perform object, a bit prematurely, though.

void seq\_copy ()

Copies the selected (current) sequence to the clipboard sequence.

void seq\_cut ()

Deletes the selected (current) sequence and copies it to the clipboard sequence, if it is not in edit mode.

void seq\_paste ()

Pastes the sequence clipboard into the current sequence, if the current sequence slot is not active.

void seq\_clear\_perf ()

If the current sequence is active, this function pushes a trigger undo in the main perform object, clears its sequence triggers for the current sequence, and sets the dirty flag of the sequence.

• void set\_bus\_and\_midi\_channel (int a\_bus, int a\_ch)

Sets up the bus, MIDI channel, and dirtiness flag of the current sequence in the main perform object, as per the give parameters.

void set transposable (bool flag)

Sets the "is-transposable" flag of the current sequence.

void mute\_all\_tracks ()

Mutes all tracks in the main perform object.

• void unmute\_all\_tracks ()

Unmutes all tracks in the main perform object.

void toggle\_all\_tracks ()

Toggles the mute-status of all tracks in the main perform object.

void on\_realize ()

## **Private Attributes**

• Gtk::Menu \* m\_menu

The menu to pop up when the right-click action is used either on a mainwid pattern slot or on a perfedit pattern name.

· perform & m\_mainperf

Provides a reference to the central (non-UI) object involved in managing a song and performance.

• sequence m\_clipboard

Holds a copy of data concerning a sequence, which can then be pasted into another pattern slot.

• seqedit \* m\_seqedit

Points to the latest sequdit object, if created.

• eventedit \* m\_eventedit

Points to the latest eventedit object, if created.

int m\_current\_seq

References the current sequence by sequence number.

· bool m modified

Indicates if a sequence has been created.

#### **Static Private Attributes**

• static SeqeditMap sm\_seqedit\_list

Holds a list of the currently open sequedit objects, stored as pointers keyed by the sequence number.

# **Friends**

- class mainwnd
- class seqedit

# 13.64.1 Detailed Description

It is an abstract base class.

# 13.64.2 Member Typedef Documentation

# 13.64.2.1 SeqeditMap

```
typedef std::map<int, seqedit *> seq64::seqmenu::SeqeditMap [private]
```

#### 13.64.2.2 SeqeditPair

```
typedef std::pair<int, seqedit *> seq64::seqmenu::SeqeditPair [private]
```

# 13.64.2.3 iterator

typedef std::map<int, seqedit \*>::iterator seq64::seqmenu::iterator [private]

## 13.64.2.4 const\_iterator

```
typedef std::map<int, seqedit *>::const_iterator seq64::seqmenu::const_iterator [private]
```

## 13.64.3 Constructor & Destructor Documentation

# 13.64.3.1 segmenu()

```
seq64::seqmenu::seqmenu ( perform \& p )
```

Apart from filling in some of the members, this function initializes the clipboard, so that we don't get a crash on a paste with no previous copy.

#### **Parameters**

p The main performance object representing the whole MIDI song.

## 13.64.3.2 $\sim$ segmenu()

```
seq64::seqmenu::~seqmenu ( ) [virtual]
```

A rote destructor.

This is necessary in an abstraction base class.

If we determine that we need to delete the m\_seqedit pointer, we can do it here. But that is not likely, because we can have many new seqedit objects in play, because we can edit many at once.

# 13.64.4 Member Function Documentation

```
13.64.4.4 set_edit_sequence()
void seq64::seqmenu::set_edit_sequence (
             int seqnum ) [inline], [protected]
Now a pass-along to the perform object.
13.64.4.5 unset_edit_sequence()
void seq64::seqmenu::unset_edit_sequence (
             int seqnum ) [inline], [protected]
13.64.4.6 is_edit_sequence()
bool seq64::seqmenu::is_edit_sequence (
              int seqnum ) const [inline], [protected]
Returns true if that member is not -1, and the parameter matches it. Now a pass-along to the perform object.
13.64.4.7 is_modified() [2/2]
void seq64::seqmenu::is_modified (
             bool flag ) [inline], [protected]
13.64.4.8 get_current_sequence()
sequence* seq64::seqmenu::get_current_sequence ( ) const [inline], [protected]
13.64.4.9 get_sequence()
sequence* seq64::seqmenu::get_sequence (
              int seqnum ) const [inline], [protected]
13.64.4.10 is_current_seq_active()
bool seq64::seqmenu::is_current_seq_active ( ) const [inline], [protected]
13.64.4.11 is_current_seq_in_edit()
bool seq64::seqmenu::is_current_seq_in_edit ( ) const [inline], [protected]
13.64.4.12 new_current_sequence()
void seq64::seqmenu::new_current_sequence ( ) [inline], [protected]
```

# 

It also sets up the pattern popup menu entries that are used in mainwid. Note that, for the selected sequence, the "Edit" and "Event Edit" menu entries are not included if a pattern editor or event editor is already running. The new event editor seems to create far-reaching problems that we do not yet understand, so it is now possible to disable it at build time. We have mitigated most of those problems by not allowing both a seq\_edit() and a seq\_event\_edit() at the same time.

```
13.64.4.17 seq_edit()
void seq64::seqmenu::seq_edit ( ) [protected]
```

void seq64::seqmenu::popup\_menu ( ) [protected]

If it is already open for that sequence, this function just raises it.

Note that the m\_seqedit member to which we save the new pointer is currently there just to avoid a compiler warning.

Also, if a new sequences is created, we set the m\_modified flag to true, even though the sequence might later be deleted. Too much modification to keep track of!

An oddity is that calling show all() here does not work unless the segedit() constructor makes its show all() call.

```
13.64.4.18 seq_event_edit()
void seq64::seqmenu::seq_event_edit ( ) [protected]
```

If it is already open for that sequence, this function just raises it.

Note that the m\_eventedit member to which we save the new pointer is currently there just to avoid a compiler warning.

This menu entry is available only if the selected sequence is active. That is, if the sequence has already been created.

An oddity is that we need the show\_all() call here in order to see the dialog. A situation different from that for sequdit! However, now it doesn't seem to be needed, and we have put it back into the eventedit constructor.

We don't bother checking here if the insert succeeded. If it doesn't, all bets are off.

#### **Parameters**

s Provides the sequence for which the sequence will be created. The perform object and the current\_seq() value are implicit parameters. This object can obviously be modified by the sequence editor, so cannot be constant.

## Returns

Returns the pointer to the new seqedit object.

```
13.64.4.20 remove_segedit()
```

Called by seqedit::on\_delete\_event().

```
13.64.4.21 seq_set_and_edit()
```

How do we account for the current screenset? It might not matter if the mute/unmute keystrokes were designed to work only with the current screenset.

Change Note ca 2016-11-01 We would like to be able to right-click on a given pattern slot in mainwid, and figure out if it has a seqedit window open, so that we can update that window. So we need to add that seqedit window to a map of seqedits, keyed by the slot number. Then we can look up that slot and see if it has a seqedit window open. If the seqedit window closes, that window needs to remove itself from the map. This won't be needed for the event editor, which has no functionality from seqmenu.

#### **Parameters**

seqnum	,	The number of the sequence to edit.

Reimplemented in seq64::mainwid.

# 13.64.4.22 seq\_set\_and\_eventedit()

# **Parameters**

seqnum	The number of the sequence to event-edit.
--------	---

Reimplemented in seq64::mainwid.

```
13.64.4.23 redraw()
```

Implemented in seq64::mainwid, and seq64::perfnames.

```
13.64.4.24 seq_new()
```

```
void seq64::seqmenu::seq_new ( ) [private]
```

For one thing, if current\_seq() is either a -1 or is greater than the maximum allowed sequence number, perform :: is\_active() will return false, and we have no idea whether the sequence is not active or the sequence number is just invalid. So we need to check the pointer we got before trying to use it.

```
13.64.4.25 seq_copy()
```

```
void seq64::seqmenu::seq_copy ( ) [private]
```

We use a more appropriate function than operator =() here: sequence::partial assign().

**Todo** Can be offloaded to a perform member function that accepts a sequence clipboard non-const reference parameter.

```
13.64.4.26 seq_cut()
```

```
void seq64::seqmenu::seq_cut ( ) [private]
```

**Todo** A lot of seq\_cut() can be offloaded to a (new) perform member function that takes a sequence clipboard non-const reference parameter.

```
13.64.4.27 seq_paste()
```

```
void seq64::seqmenu::seq_paste ( ) [private]
```

Then it sets the dirty flag for the destination sequence.

**Todo** All of seq\_paste() can be offloaded to a (new) perform member function with a const clipboard reference parameter.

```
13.64.4.28 seq_clear_perf()
```

```
void seq64::seqmenu::seq_clear_perf ( ) [private]
```

# 13.64.4.29 set\_bus\_and\_midi\_channel()

#### **Parameters**

bus	The MIDI buss number to set (bus vs buss? You decide.)
ch	The MIDI channel number to set.

# 13.64.4.30 set\_transposable()

## **Parameters**

flag The value to	use to set the flag.
-------------------	----------------------

```
13.64.4.31 mute_all_tracks()
```

```
void seq64::seqmenu::mute_all_tracks ( ) [inline], [private]
```

# 13.64.4.32 unmute\_all\_tracks()

```
void seq64::seqmenu::unmute_all_tracks ( ) [inline], [private]
```

# 13.64.4.33 toggle\_all\_tracks()

```
void seq64::seqmenu::toggle_all_tracks ( ) [inline], [private]
```

# 13.64.4.34 on\_realize()

```
void seq64::seqmenu::on_realize ( ) [private]
```

# 13.64.5 Friends And Related Function Documentation

# 13.64.5.1 mainwnd

```
friend class mainwnd [friend]
```

# 13.64.5.2 seqedit

```
friend class seqedit [friend]
```

## 13.64.6 Field Documentation

```
13.64.6.1 sm_seqedit_list
```

seqmenu::SeqeditMap seq64::seqmenu::sm\_seqedit\_list [static], [private]

The single map of seqedit objects, for seqedit updates and management.

We can use this map to look up patterns that we want to change from the right-click seqmenu, and modify the sequedit affected if it is found in the list.

Currently selectable by the USE\_SEQEDIT\_MACRO until we can make it foolproof.

```
13.64.6.2 m_menu
Gtk::Menu* seq64::seqmenu::m_menu [private]

13.64.6.3 m_mainperf

perform& seq64::seqmenu::m_mainperf [private]

13.64.6.4 m_clipboard

sequence seq64::seqmenu::m_clipboard [private]

13.64.6.5 m_seqedit

seqedit* seq64::seqmenu::m_seqedit [private]
```

Change Note Added by Chris on 2015-08-02 based on compiler warnings and a comment warning in the seq\_edit() function. We'll save the result of that function here, and will let valgrind tell us later if Gtkmm takes care of it.

```
13.64.6.6 m_eventedit
eventedit* seq64::seqmenu::m_eventedit [private]

13.64.6.7 m_current_seq
int seq64::seqmenu::m_current_seq [private]

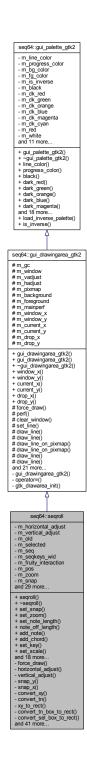

13.64.6.8 m_modified
bool seq64::seqmenu::m_modified [private]
```

Todo We need to make sure that the perform object is in control of the modification flag.

# 13.65 seq64::seqroll Class Reference

Implements the piano roll section of the pattern editor.

Inheritance diagram for seq64::seqroll:

# **Public Member Functions**

• seqroll (perform &perf, sequence &seq, int zoom, int snap, seqkeys &seqkeys\_wid, int pos, Gtk::Adjustment &hadjust, Gtk::Adjustment &vadjust, int ppqn=SEQ64\_USE\_DEFAULT\_PPQN)

Principal constructor.

virtual ~seqroll ()

Provides a destructor to delete allocated objects.

void set\_snap (int snap)

Sets the snap to the given value, and then resets the view.

void set\_zoom (int zoom)

Sets the zoom to the given value, and then resets the view.

void set\_note\_length (int note\_length)

'Setter' function for member m\_note\_length

• int note\_off\_length () const

'Getter' function for member m\_note\_length, adjusted for the note\_off\_margin.

bool add\_note (midipulse tick, int note, bool paint=true)

Convenience wrapper for sequence::add\_note().

· void add\_chord (midipulse tick, int note)

Convenience wrapper for sequence::add\_chord().

void set\_key (int key)

Sets the music key to the given value, and then resets the view.

void set\_scale (int scale)

Sets the music scale to the given value, and then resets the view.

void set chord (int chord)

Sets the current chord to the given value.

void set\_data\_type (midibyte status, midibyte control)

Sets the status to the given parameter, and the CC value to the given optional control parameter, which defaults to 0.

void set background sequence (bool state, int seq)

This function sets the given sequence onto the piano roll of the pattern editor, so that the musician can have another pattern to play against.

void update\_pixmap ()

This function draws the background pixmap on the main pixmap, and then draws the events on it.

• void update\_sizes ()

Update the sizes of items based on zoom, PPQN, BPM, BW (beat width) and more.

void update\_background ()

Updates the background of this window.

void draw\_background\_on\_pixmap ()

Draws the main pixmap.

void draw\_events\_on\_pixmap ()

Fills the main pixmap with events.

void draw\_selection\_on\_window ()

Draws the current selecton on the main window.

void draw\_progress\_on\_window ()

Draw a progress line on the window.

· void reset ()

This function basically resets the whole widget as if it were realized again.

void update\_and\_draw (int force=false)

Wraps up some common code.

· void redraw ()

Redraws unless m\_ignore\_redraw is true.

void redraw\_events ()

Redraws events unless m\_ignore\_redraw is true.

· void start\_paste ()

Starts a paste operation.

- void complete\_paste ()
- void complete\_paste (int x, int y)

Completes a paste operation.

void follow\_progress ()

#### **Private Member Functions**

virtual void force\_draw ()

Set the pixmap into the window and then draws the selection on it.

void horizontal adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

void vertical\_adjust (double step)

This function provides optimization for the on\_scroll\_event() function.

void snap\_y (int &y)

Snaps the y value to the piano-key "height".

void snap\_x (int &x)

Performs a 'snap' operation on the x coordinate.

- void convert\_xy (int x, int y, midipulse &ticks, int &note)
- void convert tn (midipulse ticks, int note, int &x, int &y)

This function takes the given note and tick, and returns the screen coordinates via the pointer parameters.

void xy\_to\_rect (int x1, int y1, int x2, int y2, int &x, int &y, int &w, int &h)

Converts rectangle corner coordinates to a starting coordinate, plus a width and height.

void convert\_tn\_box\_to\_rect (midipulse tick\_s, midipulse tick\_f, int note\_h, int note\_l, int &x, int &y, int &w, int &h)

Converts a tick/note box to an x/y rectangle.

void convert\_sel\_box\_to\_rect (midipulse tick\_s, midipulse tick\_f, int note\_h, int note\_l)

A convenience function wrapping a common call to convert\_tn\_box\_to\_rect().

void get selected box (midipulse &tick s, int &note h, midipulse &tick f, int &note l)

A convenience function wrapping a common call to m\_seq.get\_selected\_box() and convert\_tn\_box\_to\_rect().

void draw\_events\_on (Glib::RefPtr< Gdk::Drawable > draw)

Draws events on the given drawable area.

• int idle redraw ()

Draw the events on the main window and on the pixmap.

- int idle\_progress ()
- void change\_horz ()

Change the horizontal scrolling offset and redraw.

· void change\_vert ()

Change the vertical scrolling offset and redraw.

void move\_selection\_box (int dx, int dy)

Function to allow motion of the selection box via the arrow keys.

void move\_selected\_notes (int dx, int dy)

Proposed new function to encapsulate the movement of selections even more fully.

void grow\_selected\_notes (int dx)

Proposed new function to encapsulate the movement of selections even more fully.

void set\_adding (bool adding)

Changes the mouse cursor pixmap according to whether a note is being added or not.

void update\_mouse\_pointer (bool adding=false)

Updates the mouse pointer, implementing a context-sensitive mouse.

- bool button\_press\_initial (GdkEventButton \*ev, int &norm\_x, int &snapped\_x, int &snapped\_y)
- void align selection (midipulse &tick s, int &note h, midipulse &tick f, int &note l, int snapped x)

Get the box that selected elements are in.

• bool button\_press (GdkEventButton \*ev)

Implements the on-button-press event handling for the Seq24 style of mouse interaction.

bool button\_release (GdkEventButton \*ev)

Implements the on-button-release event handling for the Seq24 style of mouse interaction.

• bool motion\_notify (GdkEventMotion \*ev)

Seq24-style on-motion mouse interaction.

void clear\_selected ()

'Setter' function for member m\_old

· void clear old ()

'Setter' function for member m\_old

· void clear flags ()

Clears all the mouse-action flags.

int scroll offset x (int x) const

Useful x calculation.

int scroll\_offset\_y (int y) const

Useful y calculation.

void set\_current\_offset\_x\_y (int x, int y)

Useful x calculation.

• bool adding () const

'Getter' function for member m\_adding

• bool selecting () const

'Getter' function for member m\_selecting

· bool growing () const

'Getter' function for member m\_growing

· bool normal action () const

Indicates if we're drag-pasting, selecting, moving, growing, or pasting.

bool select\_action () const

Indicates if we're selecting, moving, growing, or pasting.

bool drop\_action () const

Indicates if we're moving or pasting.

• bool moving () const

'Getter' function for member m\_moving

void on\_realize ()

Implements the on-realize event handling.

bool on expose event (GdkEventExpose \*ev)

Implements the on-expose event handling.

bool on\_button\_press\_event (GdkEventButton \*ev)

Implements the on-button-press event handling.

bool on\_button\_release\_event (GdkEventButton \*ev)

Implements the on-button-release event handling.

• bool on\_motion\_notify\_event (GdkEventMotion \*ev)

Implements the on-motion-notify event handling.

bool on\_focus\_in\_event (GdkEventFocus \*)

Implements the on-focus event handling.

bool on\_focus\_out\_event (GdkEventFocus \*)

Implements the on-unfocus event handling.

bool on\_key\_press\_event (GdkEventKey \*ev)

Implements the on-key-press event handling.

bool on\_scroll\_event (GdkEventScroll \*a\_ev)

Implements the on-scroll event handling.

• void on\_size\_allocate (Gtk::Allocation &)

Implements the on-size-allocate event handling.

bool on\_leave\_notify\_event (GdkEventCrossing \*p0)

Implements the on-leave-notify event handling.

bool on\_enter\_notify\_event (GdkEventCrossing \*p0)

Implements the on-enter-notify event handling.

## **Private Attributes**

Gtk::Adjustment & m\_horizontal\_adjust

For accessing on\_key\_press\_event().

Gtk::Adjustment & m\_vertical\_adjust

We need direct access to the vertical scrollbar if we want to be able to make it follow PageUp and PageDown.

· rect m old

The previous selection rectangle, used for undrawing it.

· rect m selected

Used in moving and pasting notes.

• sequence & m\_seq

Provides a reference to the sequence represented by piano roll.

seqkeys & m\_seqkeys\_wid

Holds a reference to the seqkeys pane that is associated with the seqroll piano roll.

• FruitySeqRollInput m\_fruity\_interaction

Provides a fruity input object, whether it is needed or not.

int m\_pos

A position value.

• int m zoom

Zoom setting, means that one pixel == m\_zoom ticks.

int m\_snap

The grid-snap setting for the piano roll grid.

• int m ppqn

The value of PPQN for the current MIDI song.

• int m\_note\_length

Holds the note length in force for this sequence.

• int m scale

Indicates the musical scale in force for this sequence.

int m\_chord

Indicates the current chord in force for this sequence for inserting notes.

· int m key

Indicates the musical key in force for this sequence.

bool m\_adding

Set when in note-adding mode.

bool m\_selecting

Set when highlighting a bunch of events.

• bool m\_moving

Set when moving a bunch of events.

bool m\_moving\_init

Indicates the beginning of moving some events.

• bool m\_growing

Indicates that the notes are to be extended or reduced in length.

bool m\_painting

Indicates the painting of events.

bool m paste

Indicates that we are in the process of painting notes.

bool m\_is\_drag\_pasting

Indicates the drag-pasting of events.

· bool m is drag pasting start

Indicates the drag-pasting of events.

• bool m\_justselected\_one

Indicates the selection of one event.

int m\_move\_delta\_x

Tells where the dragging started, the x value.

· int m\_move\_delta\_y

Tells where the dragging started, the y value.

int m\_move\_snap\_offset\_x

This item is used in the fruityseqroll module.

· int m\_progress\_x

Provides the location of the progress bar.

· int m scroll offset ticks

The horizontal value of the scroll window in units of ticks/pulses/divisions.

• int m\_scroll\_offset\_key

The vertical offset of the scroll window in units of MIDI notes/keys.

int m scroll offset x

The horizontal value of the scroll window in units of pixels.

int m\_scroll\_offset\_y

The vertical value of the scroll window in units of pixels.

· bool m transport follow

TBD.

bool m\_trans\_button\_press

TBD.

· int m background sequence

Holds the value of the musical background sequence that is shown in cyan (formerly grey) on the background of the piano roll.

bool m\_drawing\_background\_seq

Set to true if the drawing of the background sequence is to be done.

· midibyte m\_status

Set to true to avoid the call to update\_and\_draw().

• midibyte m\_cc

The current MIDI control value selected in the sequdit.

## **Friends**

· class FruitySeqRollInput

This friend implements fruity interaction-specific behavior.

### **Additional Inherited Members**

### 13.65.1 Constructor & Destructor Documentation

## 13.65.1.1 segroll()

```
seq64::seqroll::seqroll (
    perform & p,
    sequence & seq,
    int zoom,
    int snap,
    seqkeys & seqkeys_wid,
    int pos,
    Gtk::Adjustment & hadjust,
    Gtk::Adjustment & vadjust,
    int ppqn = SEQ64_USE_DEFAULT_PPQN )
```

#### **Parameters**

p	The performance object that helps control this piano roll. Note that we can get the perform object from the sequence, and save a parameter. Low priority change.		
seq	The sequence object represented by this piano roll.		
zoom	The initial zoom of this piano roll.		
snap	The initial grid snap of this piano roll.		
seqkeys_wid	A reference to the piano keys window that is shown to the left of this piano roll.		
pos	A position parameter. See the description of seqroll::m_pos. This is actually the sequence number, and is currently unused. However, we're sure we can find a use for it sometime.		
hadjust	Represents the horizontal scrollbar of this window. It is actually created by the "parent" sequential object.		
vadjust	Represents the vertical scrollbar of this window. It is actually created by the "parent" sequential object.		
ppqn	The initial value of the PPQN for this sequence. Useful in scale calculations.		

## 13.65.1.2 $\sim$ segroll()

```
seq64::seqroll::\sim seqroll ( ) [virtual]
```

The only thing to delete here is the clipboard. Except it is never used, so is commented out.

## 13.65.2 Member Function Documentation

# 13.65.2.1 set\_snap()

## **Parameters**

## 13.65.2.2 set\_zoom()

# **Parameters**

zoom The desired zoom value, assumed to be validated already. See the seqedit::set\_zoom() function.

## 13.65.2.3 set\_note\_length()

```
void seq64::seqroll::set_note_length (
```

The length parameters is obtained from the note\_off\_length() function. This sets the note length at a little less than the snap value.

#### **Parameters**

tick	The time destination of the new note, in pulses.			
note	The pitch destination of the new note.			
paint	If true, repaint to be left with just the inserted event. The default is true. The value of false is useful in inserting a number of events and saving the repainting until last. It is a bit tricky, as the default paint value for sequence::add_note() is false.			

## 13.65.2.6 add\_chord()

Implicit parameters are the m\_chord and note\_off\_length() members. The latter deducts just a little from the snap value.

## **Parameters**

tick	The tick at which to add the chord.
note	The base (bottom) note of the chord.

## 13.65.2.7 set\_key()

## **Parameters**

key	The desired key value.
,	•

## 13.65.2.8 set\_scale()

#### **Parameters**

scale The desired scale value.
--------------------------------

## 13.65.2.9 set\_chord()

### **Parameters**

chord The desired chord value.

## 13.65.2.10 set\_data\_type()

Unlike the same function in seqevent, this version does not redraw. Used by seqedit.

## 13.65.2.11 set\_background\_sequence()

```
void seq64::seqroll::set_background_sequence ( bool \ state, int \ seq )
```

The state parameter sets the boolean m\_drawing\_background\_seq.

## **Parameters**

state	If true, the background sequence will be drawn.		
seq	Provides the sequence number, which is checked against the SEQ64_IS_LEGAL_SEQUENCE() macro before being used. This macro allows the value SEQ64_SEQUENCE_LIMIT, which disables the background sequence.		

## 13.65.2.12 update\_pixmap()

```
void seq64::seqroll::update_pixmap ( )
```

```
13.65.2.13 update_sizes()
```

```
void seq64::seqroll::update_sizes ( )
```

It brings the scrollbar back to the beginning, resets the upper limit to the number of ticks in the sequence, sets the page-size based on the window size and the zoom factor.

The horizontal step increment is 1 semiquaver (1/16) note per zoom level. The horizontal page increment is currently always one bar. We may want to make that larger for scrolling after the progress bar.

Tha maximum value set for the scrollbar brings it to the last "page" of the piano roll.

The vertical size are also adjusted. More on the story later.

```
13.65.2.14 update_background()
```

```
void seq64::seqroll::update_background ( )
```

The first thing done is to clear the background, painting it white.

```
13.65.2.15 draw_background_on_pixmap()
```

```
void seq64::seqroll::draw_background_on_pixmap ( )
```

## 13.65.2.16 draw\_events\_on\_pixmap()

```
void seq64::seqroll::draw_events_on_pixmap ( )
```

Just calls draw\_events\_on().

## 13.65.2.17 draw\_selection\_on\_window()

```
void seq64::seqroll::draw_selection_on_window ( )
```

Note the parameters of draw drawable(), which we need to be sure of to draw thicker boxes.

```
    x and y position of rectangle to draw
    x and y position in drawable where rectangle should be drawn
    width and height of rectangle to draw
```

A final parameter of false draws an unfilled rectangle. Orange makes it a little more clear that we're pasting, I think. We also want to try to thicken the lines somehow.

#### 13.65.2.18 draw\_progress\_on\_window()

```
void seq64::seqroll::draw_progress_on_window ( )
```

This is done by first blanking out the line with the background, which contains white space and grey lines, using the the draw\_drawable function. Remember that we wrap the draw\_drawable() function so it's parameters are xsrc, ysrc, xdest, ydest, width, and height.

Note that the progress-bar position is based on the sequence::get\_last\_tick() value, the current zoom, and the current scroll-offset x value.

Finally, we had an issue with the selection box flickering, which seems to be solved satisfactorily by not drawing it if a select action is in force. Hopefully no one needs to select notes on the fly and see the progress bar moving at the same time! Another tactic is to draw progress only when the performance is running. This has the benefit/drawback that the progress bar is left where it stops. Consider an enumeration of options: normal, when-not-selecting, and when-running.

#### 13.65.2.19 reset()

```
void seq64::seqroll::reset ( )
```

It's almost identical to the change\_horz() function, just calling update\_sizes() before update\_and\_draw().

#### 13.65.2.20 update\_and\_draw()

#### **Parameters**

force If true, force an immediate draw, otherwise just queue up a draw. This value defaults to false.

## 13.65.2.21 redraw()

```
void seq64::seqroll::redraw ( )
```

Somewhat similar to seqevent::redraw(). Actually, we don't seem to need to ignore redraw when making settings in the seqedit constructor, so this member no longer exists.

## 13.65.2.22 redraw\_events()

```
void seq64::seqroll::redraw_events ( )
```

Actually, that member is not needed and no longer exists.

## 13.65.2.23 start\_paste()

```
void seq64::seqroll::start_paste ( )
```

A duplicate of the one in seqedit.

## Parameters

step

Provides the step value to use for adjusting the horizontal scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_hadjust">gui\_drawingarea\_gtk2::scroll\_hadjust</a>() for more information.

## 13.65.2.29 vertical\_adjust()

A duplicate of the one in seqedit.

## **Parameters**

step

Provides the step value to use for adjusting the vertical scrollbar. See <a href="mailto:gui\_drawingarea\_gtk2::scroll\_vadjust">gui\_drawingarea\_gtk2::scroll\_vadjust()</a> for more information.

### 13.65.2.30 snap\_y()

#### **Parameters**

	out	у	The y-value to be snapped.
--	-----	---	----------------------------

## 13.65.2.31 snap\_x()

This function is similar to snap\_y(), but it calculates a modulo value from the snap and zoom settings.

```
- m_snap = number pulses to snap to
- m_zoom = number of pulses per pixel
```

Therefore, m\_snap / m\_zoom = number pixels to snap to.

### **Parameters**

## 13.65.2.32 convert\_xy()

## 13.65.2.33 convert\_tn()

This function is the "inverse" of convert\_xy().

### **Parameters**

	tick	Provides the horizontal value in MIDI pulses.
	note	Provides the vertical value, a note value.
out	Х	Provides the destination x value of the coordinate.
out	У	Provides the destination y value of the coordinate.

## 13.65.2.34 xy\_to\_rect()

This function checks the mins / maxes, and then fills in the x, y, width, and height values.

We should refactor this function to use the utility class seqroll::rect as the destination for the conversion.

### **Parameters**

	x1	The x value of the first corner.
	y1	The y value of the first corner.
	x2	The x value of the second corner.
	y2	The y value of the second corner.
out	Х	The destination for the x value in pixels.
out	У	The destination for the y value in pixels.
out	W	The destination for the rectangle width in pixels.
out	h	The destination for the rectangle height value in pixels.

## 13.65.2.35 convert\_tn\_box\_to\_rect()

We should refactor this function to use the utility class seqroll::rect as the destination for the conversion.

## **Parameters**

	tick_s	The starting tick of the rectangle.
	tick_f	The finishing tick of the rectangle.
	note⊷ h	The high note of the rectangle.
	_	The law water of the wasternale
	note⊷	The low note of the rectangle.
	_/	
out	х	The destination for the x value in pixels.
out	У	The destination for the y value in pixels.
out	W	The destination for the rectangle width in pixels.
out	h	The destination for the rectangle height value in pixels.

### 13.65.2.36 convert\_sel\_box\_to\_rect()

### **Parameters**

tick_s	The starting tick of the rectangle.
tick_f	The finishing tick of the rectangle.
note↔ _h	The high note of the rectangle.
note⊷ _I	The low note of the rectangle.

## 13.65.2.37 get\_selected\_box()

```
void seq64::seqroll::get_selected_box (
    midipulse & tick_s,
    int & note_h,
    midipulse & tick_f,
    int & note_l ) [private]
```

## **Parameters**

out	tick_s	The starting tick of the rectangle.
out	tick_f	The finishing tick of the rectangle.
out	note⊷	The high note of the rectangle.
	_h	
out	note⊷	The low note of the rectangle.
	_/	

## 13.65.2.38 draw\_events\_on()

"Method 0" draws the background sequence, if active. "Method 1" draws the sequence itself.

### **Parameters**

```
draw The "drawable" area to draw on.
```

### 13.65.2.39 idle\_redraw()

```
int seq64::seqroll::idle_redraw ( ) [private]
```

```
13.65.2.40 idle_progress()
int seq64::seqroll::idle_progress ( ) [private]

13.65.2.41 change_horz()

void seq64::seqroll::change_horz ( ) [private]

Roughly similar to seqevent::change_horz().

13.65.2.42 change_vert()

void seq64::seqroll::change_vert ( ) [private]

13.65.2.43 move_selection_box()

void seq64::seqroll::move_selection_box ( int dx, int dy ) [private]
```

We now let the Enter key to finish pasting and deselect the moved notes. With the mouse, selecting all notes, copying them, and moving the selection box, pasting can be completed with either a left-click or the Enter key.

We have a weird problem on our main system where the selection box is very flickery. But it works fine on another system. A Gtk-2 issue? Now it seems to work fine, after an update. No, it seems to work well in sequences that have non-note events amongst the note events.

## **Parameters**

```
    dx The amount to move the selection box. Values are -1, 0, or 1. -1 is left one snap, 0 is no movement horizontally, and 1 is right one snap.
    dy The amount to move the selection box. Values are -1, 0, or 1. -1 is up one snap, 0 is no movement vertically, and 1 is down one snap.
```

## 13.65.2.44 move\_selected\_notes()

Works with the four arrow keys.

Note that the movement vertically is different for the selection box versus the notes. While the movement values are -1, 0, or 1, the differences are as follows:

```
    Selection box vertical movement:
    - 1 is up one note snap.
    0 is no vertical movement.
    +1 is down one note snap.
```

- Note vertical movement:

  - 1 is down one note.
     0 is no note vertical movement.
     +1 is up one note.

#### **Parameters**

- dx The amount to move the selection box or the selection horizontally. Values are -1 (left one time snap), 0 (no movement), and +1 (right one snap). Obviously values other than +-1 can be used for larger movement, but the GUI doesn't yet support that ... we could implement movement by "pages" some day.
- dy The amount to move the selection box or the selection vertically. See the notes above.

### 13.65.2.45 grow\_selected\_notes()

### **Parameters**

dx

The amount to grow the selection horizontally. Values are -1 (left one time snap), 0 (no stretching), and +1 (right one snap). Obviously values other than +-1 can be used for larger stretching, but the GUI doesn't yet support that.

### 13.65.2.46 set\_adding()

What calls this? It is actually a right click. Not present in the "fruity" implementation. Now moved to the normal segroll class.

### **Parameters**

```
adding True if adding a note.
```

## 13.65.2.47 update\_mouse\_pointer()

Moved here from the "fruity" seqroll class.

### 13.65.2.48 button\_press\_initial()

## 13.65.2.49 align\_selection()

```
void seq64::seqroll::align_selection (
    midipulse & tick_s,
    int & note_h,
    midipulse & tick_f,
    int & note_l,
    int snapped_x ) [private]
```

Save offset that we get from the snap above. Align selection for drawing. Could be used in XRollInput::on\_button ← \_press\_event().

### 13.65.2.50 button\_press()

This function now uses the needs update flag to determine if the perform object should modify().

#### **Parameters**

*ev* Provides the button-press event to process.

### Returns

Returns the value of needs\_update. It used to return only true.

### 13.65.2.51 button\_release()

This function now uses the needs\_update flag to determine if the perform object should modify().

#### **Parameters**

ev Provides the button-release event to process.

## Returns

Returns the value of needs\_update. It used to return only true.

If in moving mode, adjust for snap and convert deltas into screen coordinates. Since delta\_note was from delta\_y, it will be flipped (delta\_y[0] = note[127], etc.), so we have to adjust.

A left/middle click converts deltas into screen coordinates, then pushs the undo state. Shift causes a "stretch selected" which currently acts like a "move selected" operation. BUG? Otherwise, Ctrl indirectly allows a "grow selected" operation.

Minor new feature. If the Super (Mod4, Windows) key is pressed when release, keep the adding state in force. One can then use the unadorned left-click key to add notes. Right click to reset the adding mode. This feature is enabled only if allowed by the settings (but is true by default). See the same code in perfrollingut.cpp.

### 13.65.2.52 motion\_notify()

We could allow move painting for chords, but that would take some tricky code to move all of the notes of the chord. And allowing painting here currently affects only one note after the chord itself is created.

### **Parameters**

*ev* Provides the button-release event to process.

#### Returns

Returns true if the event was processed.

```
13.65.2.53 clear_selected()
```

```
void seq64::seqroll::clear_selected ( ) [inline], [private]
```

### 13.65.2.54 clear\_old()

```
void seq64::seqroll::clear_old ( ) [inline], [private]
```

## 13.65.2.55 clear\_flags()

```
void seq64::seqroll::clear_flags ( ) [inline], [private]
```

### 13.65.2.56 scroll\_offset\_x()

Offsets the x value by the x origin of the current page.

## **Parameters**

```
x The x value to offset.
```

## 13.65.2.57 scroll\_offset\_y()

Offsets the y value by the y origin of the current page.

#### **Parameters**

```
y The y value to offset.
```

## 13.65.2.58 set\_current\_offset\_x\_y()

Offsets the current x value by the x origin of the current page.

#### **Parameters**

```
x The x value to offset.
```

void set\_current\_offset\_x (int x) {  $m_current_x = x + m_scroll_offset_x$ ; } Useful y calculation. Offsets the current y value by the y origin of the current page.

#### **Parameters**

```
y The y value to offset.
```

void set\_current\_offset\_y (int y) { m\_current\_y =  $y + m_scroll_offset_y$ ; } Useful x and y calculation. Offsets the current x and y values by the x and y origin of the current page.

## **Parameters**

X	The y value to offset.
у	The y value to offset.

### 13.65.2.59 adding()

```
bool seq64::seqroll::adding ( ) const [inline], [private]
```

## 13.65.2.60 selecting()

```
bool seq64::seqroll::selecting ( ) const [inline], [private]
```

## 13.65.2.61 growing()

```
bool seq64::seqroll::growing ( ) const [inline], [private]
```

```
13.65.2.62 normal_action()
```

```
bool seq64::seqroll::normal_action ( ) const [inline], [private]
```

#### Returns

Returns true if one of those five flags are set.

## 13.65.2.63 select\_action()

```
bool seq64::seqroll::select_action ( ) const [inline], [private]
```

#### Returns

Returns true if one of those four flags are set.

## 13.65.2.64 drop\_action()

```
bool seq64::seqroll::drop_action ( ) const [inline], [private]
```

### Returns

Returns true if one of those two flags are set.

## 13.65.2.65 moving()

```
bool seq64::seqroll::moving ( ) const [inline], [private]
```

## 13.65.2.66 on\_realize()

```
void seq64::seqroll::on_realize ( ) [private]
```

## 13.65.2.67 on\_expose\_event()

### **Parameters**

```
ev The expose event to process.
```

#### Returns

Always returns true.

### 13.65.2.68 on\_button\_press\_event()

#### **Parameters**

ev The expose event to process.

#### Returns

Returns the result of the Seq24 interaction or the Fruity interaction, that is, the return value of Seq24Seq← RollInput::on\_button\_press\_event() or FruitySeqRollInput::on\_button\_press\_event().

### 13.65.2.69 on\_button\_release\_event()

This function checks the "rc" interaction-method option, and calls the forwarding function for the seq24 or the fruity interaction method. Might be a good case to prefer inheritance and not try to support changing the interaction method without a restart of Sequencer64.

#### **Parameters**

ev The button release event to process.

### Returns

Returns the return value of Seq24SeqRollInput::on\_button\_release\_event() or FruitySeqRollInput::on\_ $\leftarrow$ button\_release\_event().

## 13.65.2.70 on\_motion\_notify\_event()

### **Parameters**

*ev* The motion-notification event to process.

### Returns

Returns the return value of Seq24SeqRollInput::on\_motion\_notify\_event() or FruitySeqRollInput::on\_motion  $\leftarrow$  \_notify\_event().

```
13.65.2.71 on_focus_in_event()
```

Sets the GDK HAS\_FOCUS flag. Parameter "ev" is the event-focus event, not used.

#### Returns

Always returns false.

## 13.65.2.72 on\_focus\_out\_event()

Resets the GDK HAS\_FOCUS flag. Parameter "ev" is the event-focus event, not used.

### Returns

Always returns false.

## 13.65.2.73 on\_key\_press\_event()

The start/end key may be the same key (i.e. SPACEBAR). Allow toggling when the same key is mapped to both triggers (i.e. SPACEBAR).

Concerning the usage of the arrow keys in this function: This code is reached, but has no visible effect. Why? I think they were meant to move the point for playback. We may have a bug with our new handling of triggers (unlikely), or maybe these depend upon the proper playback mode. In any case, the old functionality is preserved. However, if there are notes selected, then these keys support selection movement.

Since the Up and Down arrow keys are used for movement, we'd have to check selection status before trying to use them to move up and down in the piano roll, in smaller steps than the new Page-Up and Page-Down key support.

## **Parameters**

```
ev The key-press event to process.
```

### Returns

Returns true if the key-press was handled.

I think we should be able to move and remove notes while playing, which is already supported using the mouse.

if (! perf().is\_playing)

### 13.65.2.74 on\_scroll\_event()

This scroll event only handles basic scrolling without any modifier keys such as the Ctrl or Shift masks. The seqedit class handles that fun stuff.

Note that this function seems to duplicate the functionality of seqkeys::on\_scroll\_event(). Do we really need both?
Which one do we need?

#### **Parameters**

```
ev The scroll event to process.
```

#### Returns

Returns true if the scroll event was handled.

### 13.65.2.75 on\_size\_allocate()

Calls the base-class version of this function and sets m\_window\_x and m\_window\_y to the width and height of the allocation parameter. Then calls update\_sizes().

## **Parameters**

a The GDK allocation event object.

## 13.65.2.76 on\_leave\_notify\_event()

Calls m\_seqkeys\_wid.set\_hint\_state(false). Parameter "ev" is the event-crossing event, not used.

### Returns

Always returns false.

## 13.65.2.77 on\_enter\_notify\_event()

Calls m\_seqkeys\_wid.set\_hint\_state(true). Parameter "ev" is the event-crossing event, not used.

## Returns

Always returns false.

## 13.65.3 Friends And Related Function Documentation

### 13.65.3.1 FruitySeqRollInput

```
friend class FruitySeqRollInput [friend]
```

We've absorbed the Seq24SeqRollInput class functionality back into seqroll, to save code.

## 13.65.4 Field Documentation

## 13.65.4.1 m\_horizontal\_adjust

```
Gtk::Adjustment& seq64::seqroll::m_horizontal_adjust [private]
```

It would be good to be able to avoid this access!

Change Note layk 2016-10-17 Issue #46. No need for this declaration now, due to the fix in seqedit.

friend class sequedit; We need direct access to the horizontal scrollbar if we want to be able to make it follow the progress bar.

```
13.65.4.2 m_vertical_adjust

Gtk::Adjustment& seq64::seqroll::m_vertical_adjust [private]

13.65.4.3 m_old

rect seq64::seqroll::m_old [private]

13.65.4.4 m_selected

rect seq64::seqroll::m_selected [private]

13.65.4.5 m_seq

sequence& seq64::seqroll::m_seq [private]

13.65.4.6 m_seqkeys_wid

seqkeys& seq64::seqroll::m_seqkeys_wid [private]
```

FruitySeqRollInput seq64::seqroll::m\_fruity\_interaction [private]

13.65.4.7 m\_fruity\_interaction

```
13.65.4.8 m_pos
int seq64::seqroll::m_pos [private]
Need to clarify what exactly this member is used for.
13.65.4.9 m_zoom
int seq64::seqroll::m_zoom [private]
13.65.4.10 m_snap
int seq64::seqroll::m_snap [private]
Same meaning as for the event-bar grid. This value is the denominator of the note size used for the snap.
13.65.4.11 m_ppqn
int seq64::seqroll::m_ppqn [private]
Supports values other than the default of 192.
13.65.4.12 m_note_length
int seq64::seqroll::m_note_length [private]
Used in the seq24seqroll module only.
13.65.4.13 m_scale
int seq64::seqroll::m_scale [private]
13.65.4.14 m_chord
int seq64::seqroll::m_chord [private]
13.65.4.15 m_key
int seq64::seqroll::m_key [private]
13.65.4.16 m_adding
```

This flag was moved from both the fruity and the seq24 seqroll classes.

bool seq64::seqroll::m\_adding [private]

```
13.65.4.17 m_selecting
bool seq64::seqroll::m_selecting [private]
13.65.4.18 m_moving
bool seq64::seqroll::m_moving [private]
13.65.4.19 m_moving_init
bool seq64::seqroll::m_moving_init [private]
Used in the fruity and seq24 mouse-handling modules.
13.65.4.20 m_growing
bool seq64::seqroll::m_growing [private]
13.65.4.21 m_painting
bool seq64::seqroll::m_painting [private]
Used in the fruity and seq24 mouse-handling modules.
13.65.4.22 m_paste
bool seq64::seqroll::m_paste [private]
13.65.4.23 m_is_drag_pasting
bool seq64::seqroll::m_is_drag_pasting [private]
Used in the fruity mouse-handling module.
13.65.4.24 m_is_drag_pasting_start
bool seq64::seqroll::m_is_drag_pasting_start [private]
Used in the fruity mouse-handling module.
13.65.4.25 m_justselected_one
bool seq64::seqroll::m_justselected_one [private]
```

Used in the fruity mouse-handling module.

```
13.65.4.26 m_move_delta_x
int seq64::seqroll::m_move_delta_x [private]
13.65.4.27 m_move_delta_y
int seq64::seqroll::m_move_delta_y [private]
13.65.4.28 m_move_snap_offset_x
int seq64::seqroll::m_move_snap_offset_x [private]
13.65.4.29 m_progress_x
int seq64::seqroll::m_progress_x [private]
13.65.4.30 m scroll offset ticks
int seq64::seqroll::m_scroll_offset_ticks [private]
13.65.4.31 m_scroll_offset_key
int seq64::seqroll::m_scroll_offset_key [private]
13.65.4.32 m_scroll_offset_x
int seq64::seqroll::m_scroll_offset_x [private]
13.65.4.33 m_scroll_offset_y
int seq64::seqroll::m_scroll_offset_y [private]
13.65.4.34 m_transport_follow
bool seq64::seqroll::m_transport_follow [private]
13.65.4.35 m_trans_button_press
bool seq64::seqroll::m_trans_button_press [private]
```

## 13.65.4.36 m\_background\_sequence

```
int seq64::seqroll::m_background_sequence [private]
```

### 13.65.4.37 m\_drawing\_background\_seq

```
bool seq64::seqroll::m_drawing_background_seq [private]
```

#### 13.65.4.38 m status

```
midibyte seq64::seqroll::m_status [private]
```

Used in set\_background\_sequence(), change\_horz(), change\_vert(), reset().... Never set to true, except in seq24, let's just comment it out for now. It hasn't been used in sequencer64 for awhile now.

bool m\_ignore\_redraw; The current status/event selected in the seqedit. Not used in seqroll at present.

```
13.65.4.39 m_cc
```

```
midibyte seq64::seqroll::m_cc [private]
```

Not used in seqroll at present.

# 13.66 seq64::seqtime Class Reference

This class implements the piano time, whatever that is.

Inheritance diagram for seq64::seqtime:

## **Public Member Functions**

seqtime (sequence &seq, perform &p, int zoom, Gtk::Adjustment &hadjust, int ppqn=SEQ64\_USE\_DEFA
 ULT\_PPQN)

Principal constructor.

- virtual  $\sim$ seqtime ()

Let's provide a do-nothing virtual destructor.

```
    void reset ()
```

Sets the scroll offset tick and x values, updates the sizes and the pixmap, and resets the window.

· void redraw ()

Very similar to the reset() function, except it doesn't update the sizes.

void set\_zoom (int zoom)

Sets the zoom to the given value and resets the window.

### **Private Member Functions**

```
void draw_pixmap_on_window ()
```

Draws the pixmap on the window.

- void draw\_progress\_on\_window ()
- void update\_pixmap ()

Updates the pixmap.

void change\_horz ()

Changes the scrolling horizontal offset, updates the pixmap, and forces a redraw.

• void update sizes ()

Updates the pixmap to a new size and queues up a draw operation.

• bool idle\_progress ()

Simply returns true.

• void on\_realize ()

Called when the window is drawn.

bool on\_expose\_event (GdkEventExpose \*a\_ev)

Implements the on-expose event handler.

void on\_size\_allocate (Gtk::Allocation &)

Implements the on-size-allocate event handler.

bool on\_button\_press\_event (GdkEventButton \*)

Implements the on-button-press event handler.

bool on\_button\_release\_event (GdkEventButton \*)

Implements the on-button-release event handler.

## **Private Attributes**

```
• sequence & m_seq
```

- int m\_scroll\_offset\_ticks
- int m\_scroll\_offset\_x
- int m\_zoom

one pixel == m\_zoom ticks

• int m\_ppqn

## **Additional Inherited Members**

## 13.66.1 Constructor & Destructor Documentation

### 13.66.1.1 segtime()

In the constructor you can only allocate colors; get\_window() returns 0 because the window is not yet realized>

```
void seq64::seqtime::draw_pixmap_on_window ( ) [private]

13.66.2.5 draw_progress_on_window()

void seq64::seqtime::draw_progress_on_window ( ) [private]

13.66.2.6 update_pixmap()
```

void seq64::seqtime::update\_pixmap ( ) [private]

13.66.2.4 draw\_pixmap\_on\_window()

When the zoom is at 32 ticks per pixel, there is a thick bar for every measure, and a measure number and major time division every 4 measures.at the default PPQN of 192.

A major line is a line that has a measure number in the timeline. The number of measures in a major line is 1 for zooms from 1:1 to 1:8; 2 for zoom 1:16; 4 for zoom 1:32; 8 for zoom 1:64 (new); and 16 for zoom 1:128. Zooms 1:64 and above look good only for high PPQN values.

We calculate the measure length in 32nd notes. This value is, of course, 32, when the time signature is 4/4. Then calculate measures/line. "measures\_per\_major" is more like "measures per major line". With a higher zoom than 32, this calculation yields a floating-point exception if m\_zoom

32, so we rearrange the calculation and hope that it still works out the

same for smaller values.

Stazed:

At 32, a bar every measure.

zoom ml	32	16	8	4	1
1	128				
2	64				
4	32	16	8		
8	16m	8	4	2	1
16	8m	4	2	1	1
32	4m	2	1	1	1
64	2m	1	1	1	1
128	1m	1	1	1	1

**Todo** Sizing needs to be controlled by font parameters. Instead of 19 or 20, estimate the width of 3 letters. Instead of 9 pixels down, use the height of the seqtime and the height of a character.

```
13.66.2.7 change_horz()

void seq64::seqtime::change_horz ( ) [private]

13.66.2.8 update_sizes()

void seq64::seqtime::update_sizes ( ) [private]

13.66.2.9 idle_progress()

bool seq64::seqtime::idle_progress ( ) [inline], [private]

13.66.2.10 on_realize()

void seq64::seqtime::on_realize ( ) [private]
```

Call the base-class version of this function first. Then addition resources are allocated.

13.66.2.11 on\_expose\_event()

```
13.66.2.13 on_button_press_event()
bool seq64::seqtime::on_button_press_event (
             GdkEventButton * ) [inline], [private]
Simply returns false.
13.66.2.14 on_button_release_event()
bool seq64::seqtime::on_button_release_event (
             GdkEventButton * ) [inline], [private]
Simply returns false.
13.66.3 Field Documentation
13.66.3.1 m_seq
sequence& seq64::seqtime::m_seq [private]
13.66.3.2 m_scroll_offset_ticks
int seq64::seqtime::m_scroll_offset_ticks [private]
13.66.3.3 m_scroll_offset_x
int seq64::seqtime::m_scroll_offset_x [private]
13.66.3.4 m_zoom
int seq64::seqtime::m_zoom [private]
13.66.3.5 m_ppqn
int seq64::seqtime::m_ppqn [private]
```

# 13.67 seq64::sequence Class Reference

The sequence class is firstly a receptable for a single track of MIDI data read from a MIDI file or edited into a pattern.

## **Public Types**

```
enum select_action_e {
e_select,
e_select_one,
e_is_selected,
e_would_select,
e_deselect,
e_toggle_selection,
e_remove_one }
```

This enumeration is used in selecting events and note.

### **Public Member Functions**

sequence (int ppqn=SEQ64 USE DEFAULT PPQN)

Principal constructor.

∼sequence ()

A rote destructor.

void partial\_assign (const sequence &rhs)

A cut-down version of principal assignment operator.

· event\_list & events ()

'Getter' function for member m\_events Non-const version.

· const event\_list & events () const

'Getter' function for member m\_events Const version.

· bool any selected notes () const

 ${\it 'Getter' function for member m\_events.any\_selected\_notes()}$ 

• const triggers::List & triggerlist () const

'Getter' function for member m\_triggers This is the const version.

triggers::List & triggerlist ()

'Getter' function for member m\_triggers

• int get\_trigger\_count () const

Gets the trigger count, useful for exporting a sequence.

- void set\_trigger\_paste\_tick (midipulse tick)
- midipulse get\_trigger\_paste\_tick () const
- int number () const

'Getter' function for member m\_seq\_number

• void number (int seqnum)

'Setter' function for member m\_seq\_number This setter will set the sequence number only if it has not already been set.

• void modify ()

A convenience function that we have to put here so that the m\_parent pointer can be used without an additional include-file in the sequence.hpp module.

• int event count () const

Returns the number of events stored in m events.

• void set\_hold\_undo (bool hold)

Modifies the undo-hold container.

• int get\_hold\_undo () const

'Getter' function for member m\_events\_undo\_hold.count()

• void set\_have\_undo ()

'Setter' function for member m\_have\_undo

bool have\_undo () const

'Getter' function for member m\_have\_undo

void set\_have\_redo ()

'Setter' function for member m\_have\_redo No reliable way to "unmodify" the performance here.

bool have\_redo () const

'Getter' function for member m\_have\_redo

• void push\_undo (bool hold=false)

Pushes the event-list into the undo-list or the upcoming undo-hold-list.

void pop\_undo ()

If there are items on the undo list, this function pushes the event-list into the redo-list, puts the top of the undo-list into the event-list, pops from the undo-list, calls <a href="mailto:verify\_and\_link(">verify\_and\_link()</a>, and then calls unselect.

void pop\_redo ()

If there are items on the redo list, this function pushes the event-list into the undo-list, puts the top of the redo-list into the event-list, pops from the redo-list, calls verify\_and\_link(), and then calls unselect.

void push\_trigger\_undo ()

Calls triggers::push\_undo() with locking.

void pop\_trigger\_undo ()

Calls triggers::pop\_undo() with locking.

void pop\_trigger\_redo ()

Calls triggers::pop\_redo() with locking.

void set\_name (const std::string &name)

Sets the sequence name member, m\_name.

void set\_name (char \*name)

Sets the sequence name member, m\_name.

- · void set measures (int lengthmeasures)
- int get measures ()
- int get\_ppqn () const

'Getter' function for member m\_ppqn Provided as a convenience for the editable\_events class.

void set\_beats\_per\_bar (int beatspermeasure)

'Setter' function for member m\_time\_beats\_per\_measure

int get\_beats\_per\_bar () const

'Getter' function for member m\_time\_beats\_per\_measure

void set\_beat\_width (int beatwidth)

 ${\it 'Setter' function for member m\_time\_beat\_width}$ 

• int get\_beat\_width () const

'Getter' function for member m\_time\_beat\_width

• midipulse measures\_to\_ticks (int measures=1) const

A convenience function for calculating the number of ticks in the given number of measures.

void clocks\_per\_metronome (int cpm)

'Setter' function for member m\_clocks\_per\_metronome

int clocks\_per\_metronome () const

'Getter' function for member m\_clocks\_per\_metronome

void set\_32nds\_per\_quarter (int tpq)

'Setter' function for member m\_32nds\_per\_quarter

int get\_32nds\_per\_quarter () const

'Getter' function for member  $m_32nds_per_quarter$ 

void us\_per\_quarter\_note (long upqn)

'Setter' function for member m\_us\_per\_quarter\_note

• long us\_per\_quarter\_note () const

'Getter' function for member m\_us\_per\_quarter\_note

void set\_rec\_vol (int rec\_vol)

'Setter' function for member m\_rec\_vol If this velocity is greater than zero, then m\_note\_on\_velocity will be set as well.

void set\_song\_mute (bool mute)

'Setter' function for member m\_song\_mute This function also calls set\_dirty\_mp() to make sure that the perfnames panel is updated to show the new mute status of the sequence.

void toggle song mute ()

'Setter' function for member m\_song\_mute This function toogles the song muting status.

bool get\_song\_mute () const

'Getter' function for member m song mute

void apply\_song\_transpose ()

Applies the transpose value held by the master MIDI buss object, if non-zero, and if the sequence is set to be transposable.

void set\_transposable (bool flag)

'Setter' function for member m transposable Changing this flag modifies the sequence and performance.

· bool get transposable () const

'Getter' function for member m\_transposable

const char \* get\_name () const

'Getter' function for member m name pointer

const std::string & name () const

'Getter' function for member m\_name

void set\_editing (bool edit)

'Setter' function for member m editing

· bool get\_editing () const

'Getter' function for member m editing

void set\_raise (bool edit)

'Setter' function for member m\_raise

· bool get\_raise (void) const

'Getter' function for member m\_raise

void set\_length (midipulse len=0, bool adjust\_triggers=true, bool verify=true)

Sets the length (m\_length) and adjusts triggers for it, if desired.

midipulse get\_length () const

'Getter' function for member m\_length

midipulse get\_last\_tick ()

Returns the last tick played, and is used by the editor's idle function.

· void set last tick (midipulse tick)

'Setter' function for member m\_last\_tick This function used to be called "set\_orig\_tick()", now renamed to match up with get\_last\_tick().

midipulse mod\_last\_tick ()

Some MIDI file errors and other things can lead to an m\_length of 0, which causes arithmetic errors when m\_last\_tick is modded against it.

void set\_playing (bool)

Sets the playing state of this sequence.

bool get\_playing () const

'Getter' function for member m playing

void toggle\_playing ()

Toggles the playing status of this sequence.

void toggle\_queued ()

'Setter' function for member m queued and m queued tick Toggles the queued flag and sets the dirty-mp flag.

void off\_queued ()

'Setter' function for member m\_queued Turns off (resets) the queued flag and sets the dirty-mp flag.

void on\_queued ()

'Setter' function for member m\_queued Turns on (sets) the queued flag and sets the dirty-mp flag.

bool get\_queued () const

'Getter' function for member m\_queued

• midipulse get\_queued\_tick () const

'Getter' function for member m\_queued\_tick

· bool check queued tick (midipulse tick) const

Helper function for perform.

void set\_recording (bool)

'Setter' function for member m\_recording and m\_notes\_on

· bool get\_recording () const

'Getter' function for member m recording

void set\_snap\_tick (int st)

'Setter' function for member m snap tick

void set\_quantized\_rec (bool qr)

'Setter' function for member m\_quantized\_rec

• bool get\_quantized\_rec () const

'Getter' function for member m\_quantized\_rec

void set thru (bool)

'Setter' function for member m\_thru

bool get\_thru () const

'Getter' function for member m\_thru

• bool is dirty main ()

Returns the value of the dirty main flag, and sets that flag to false (i.e.

• bool is\_dirty\_edit ()

Returns the value of the dirty edit flag, and sets that flag to false.

bool is\_dirty\_perf ()

Returns the value of the dirty performance flag, and sets that flag to false.

• bool is\_dirty\_names ()

Returns the value of the dirty names (heh heh) flag, and sets that flag to false.

void set\_dirty\_mp ()

Sets the dirty flags for names, main, and performance.

• void set dirty ()

Call set\_dirty\_mp() and then sets the dirty flag for editing.

· midibyte get midi channel () const

'Getter' function for member m\_midi\_channel

• bool is\_smf\_0 () const

Returns true if this sequence is an SMF 0 sequence.

• void set\_midi\_channel (midibyte ch, bool user\_change=false)

Sets the m\_midi\_channel number>

· void print () const

Prints a list of the currently-held events.

void print\_triggers () const

Prints a list of the currently-held triggers.

• void play (midipulse tick, bool playback mode)

The play() function dumps notes starting from the given tick, and it pre-buffers ahead.

void play\_queue (midipulse tick, bool playbackmode)

Provides encapsulation for a series of called used in perform::play().

• void add\_note (midipulse tick, midipulse len, int note, bool paint=false)

Adds a note of a given length and note value, at a given tick location.

bool add\_event (const event &er)

Adds an event to the internal event list in a sorted manner.

· void add\_chord (int chord, midipulse tick, midipulse len, int note)

Adds a chord of a given length and note value, at a given tick location.

• void add\_event (midipulse tick, midibyte status, midibyte d0, midibyte d1, bool paint=false)

Adds a event of a given status value and data values, at a given tick location.

bool append\_event (const event &er)

An alternative to add\_event() that does not sort the events, even if the event list is implemented by an std::list.

void sort\_events ()

Calls event\_list::sort().

void add\_trigger (midipulse tick, midipulse len, midipulse offset=0, bool adjust\_offset=true)

Adds a trigger

void split\_trigger (midipulse tick)

Splits a trigger.

· void grow\_trigger (midipulse tick\_from, midipulse tick\_to, midipulse len)

Grows a trigger.

void del\_trigger (midipulse tick)

Deletes a trigger, that brackets the given tick, from the trigger-list.

bool get\_trigger\_state (midipulse tick)

Checks the list of triggers against the given tick.

· bool select\_trigger (midipulse tick)

Checks the list of triggers against the given tick.

triggers::List get\_triggers () const

Returns a copy of the triggers for this sequence.

bool unselect\_triggers ()

Unselects all triggers.

bool intersect\_triggers (midipulse position, midipulse &start, midipulse &ender)

This function examines each trigger in the trigger list.

• bool intersect\_notes (midipulse position, midipulse position\_note, midipulse &start, midipulse &ender, int &note)

This function examines each note in the event list.

bool intersect\_events (midipulse posstart, midipulse posend, midibyte status, midipulse &start)

This function examines each non-note event in the event list.

• void del\_selected\_trigger ()

Deletes the first selected trigger that is found.

void cut\_selected\_trigger ()

Copies and deletes the first selected trigger that is found.

• void copy\_selected\_trigger ()

First, this function clears any unpasted middle-click tick setting.

void paste\_trigger (midipulse paste\_tick=SEQ64\_NO\_PASTE\_TRIGGER)

If there is a copied trigger, then this function grabs it from the trigger clipboard and adds it.

bool move\_selected\_triggers\_to (midipulse tick, bool adjust\_offset, triggers::grow\_edit\_t which=triggers::G←
 ROW MOVE)

Moves selected triggers as per the given parameters.

• midipulse selected\_trigger\_start ()

Gets the last-selected trigger's start tick.

midipulse selected\_trigger\_end ()

Gets the selected trigger's end tick.

• midipulse get max trigger ()

Get the ending value of the last trigger in the trigger-list.

void move\_triggers (midipulse start\_tick, midipulse distance, bool direction)

Moves triggers in the trigger-list.

void copy triggers (midipulse start tick, midipulse distance)

Copies triggers to another location.

• void clear\_triggers ()

Clears the whole list of triggers.

midipulse get\_trigger\_offset () const

'Getter' function for member m\_trigger\_offset

void set\_midi\_bus (char mb, bool user\_change=false)

Sets the MIDI buss/port number to dump MIDI data to.

char get\_midi\_bus () const

'Getter' function for member m\_bus

void set\_master\_midi\_bus (mastermidibus \*mmb)

'Setter' function for member m\_masterbus Do we need to call set\_dirty\_mp() here?

• int select note events (midipulse tick s, int note h, midipulse tick f, int note l, select action e action)

Selects events in range provided: tick start, note high, tick end, and note low.

• int select\_events (midipulse tick\_s, midipulse tick\_f, midibyte status, midibyte cc, select\_action\_e action)

Select all events in the given range, and returns the number selected.

• int select events (midibyte status, midibyte cc, bool inverse=false)

Select all events with the given status, and returns the number selected.

- int select\_events (midipulse tick\_s, midipulse tick\_f, midibyte status)
- int select\_event\_handle (midipulse tick\_s, midipulse tick\_f, midibyte status, midibyte cc, int data\_s)

Use selected note ons if any.

int select\_linked (long tick\_s, long tick\_f, midibyte status)

Used with seqevent when selecting Note On or Note Off, this function will select the opposite linked event.

• int select\_even\_or\_odd\_notes (int note\_len, bool even)

Selects every other note.

• void select\_all\_notes (bool inverse=false)

New convenience function.

int get\_num\_selected\_notes () const

Counts the selected notes in the event list.

• int get\_num\_selected\_events (midibyte status, midibyte cc) const

Counts the selected events, with the given status, in the event list.

void select\_all ()

Selects all events, unconditionally.

void copy\_selected ()

Copies the selected events.

void cut\_selected (bool copyevents=true)

Cuts the selected events.

void paste selected (midipulse tick, int note)

Pastes the selected notes (and only note events) at the given tick and the given note value.

void get\_selected\_box (midipulse &tick\_s, int &note\_h, midipulse &tick\_f, int &note\_l)

Returns the 'box' of the selected items.

void get\_clipboard\_box (midipulse &tick\_s, int &note\_h, midipulse &tick\_f, int &note\_l)

Returns the 'box' of the clipboard items.

• midipulse adjust\_timestamp (midipulse t, bool isnoteoff)

A new function to consolidate the adjustment of timestamps in a pattern.

midipulse trim\_timestamp (midipulse t)

A new function to consolidate the adjustment of timestamps in a pattern.

• midipulse clip\_timestamp (midipulse ontime, midipulse offtime)

A new function to consolidate the growth/shrinkage of timestamps in a pattern.

void move\_selected\_notes (midipulse deltatick, int deltanote)

Removes and adds selected notes in position.

· bool stream event (event &ev)

Streams the given event.

bool change\_event\_data\_range (midipulse tick\_s, midipulse tick\_f, midibyte status, midibyte cc, int d\_s, int d f)

Changes the event data range.

 void change\_event\_data\_lfo (double value, double range, double speed, double phase, wave\_type\_t wave, midibyte status, midibyte cc)

Modifies data events according to the parameters active in the LFO window (Ifownd).

• void increment\_selected (midibyte status, midibyte)

Increments events the match the given status and control values.

· void decrement\_selected (midibyte status, midibyte)

Decrements events the match the given status and control values.

• void grow\_selected (midipulse deltatick)

The original description was "Moves note off event." But this also gets called when simply selecting a second note via a ctrl-left-click, even in seq24.

· void stretch selected (midipulse deltatick)

Performs a stretch operation on the selected events.

• bool remove marked ()

Removes marked events.

bool mark selected ()

Marks the selected events.

• void remove\_selected ()

Removes selected events.

void unpaint\_all ()

Unpaints all events in the event-list.

· void unselect ()

Deselects all events, unconditionally.

void verify\_and\_link ()

This function verifies state: all note-ons have a note-off, and it links note-offs with their note-ons.

void link\_new ()

Links a new event.

· void zero markers ()

Resets everything to zero.

void play\_note\_on (int note)

Plays a note from the piano roll on the main bus on the master MIDI buss.

void play note off (int note)

Turns off a note from the piano roll on the main bus on the master MIDI buss.

void off\_playing\_notes ()

Sends a note-off event for all active notes.

• void pause ()

A pause version of reset().

· void reset (bool live\_mode)

Provides a helper function simplify and speed up perform::reset\_sequences().

void reset\_draw\_marker ()

This refreshes the play marker to the last tick.

void reset\_draw\_trigger\_marker ()

Sets the draw-trigger iterator to the beginning of the trigger list.

draw\_type\_t get\_next\_note\_event (midipulse \*tick\_s, midipulse \*tick\_f, int \*note, bool \*selected, int \*velocity)

Each call to seqdata() fills the passed references with a events elements, and returns true.

• bool get\_minmax\_note\_events (int &lowest, int &highest)

A new function provided so that we can find the minimum and maximum notes with only one (not two) traversal of the event list.

bool get\_next\_event (midibyte status, midibyte cc, midipulse \*tick, midibyte \*d0, midibyte \*d1, bool \*selected, int evtype=EVENTS ALL)

Get the next event in the event list that matches the given status and control character.

bool get next event (midibyte \*status, midibyte \*cc)

Get the next event in the event list.

bool get\_next\_trigger (midipulse \*tick\_on, midipulse \*tick\_off, bool \*selected, midipulse \*tick\_offset)

Get the next trigger in the trigger list, and set the parameters based on that trigger.

void quantize\_events (midibyte status, midibyte cc, midipulse snap\_tick, int divide, bool linked=false)

Grabs the specified events, puts them into a list, quantizes them against the snap ticks, and merges them in to the event container.

• void push\_quantize (midibyte status, midibyte cc, midipulse snap\_tick, int divide, bool linked=false)

A new convenience function.

void transpose\_notes (int steps, int scale)

Transposes notes by the given steps, in accordance with the given scale.

- void shift\_notes (midipulse ticks)
- void multiply pattern (double multiplier)
- · midibyte musical key () const

'Getter' function for member m\_musical\_key

void musical\_key (int key)

'Setter' function for member m\_musical\_key

• midibyte musical\_scale () const

'Getter' function for member m\_musical\_scale

· void musical scale (int scale)

'Setter' function for member m\_musical\_scale

· int background sequence () const

'Getter' function for member m\_background\_sequence

· void background sequence (int bs)

'Setter' function for member m\_background\_sequence Only partial validation at present, we do not want the upper limit to be hard-wired at this time.

· void show events () const

A member function to dump a summary of events stored in the event-list of a sequence.

void copy\_events (const event\_list &newevents)

Copies an external container of events into the current container, effectively replacing all of its events.

· midipulse note\_off\_margin () const

'Getter' function for member m\_note\_length

# **Private Types**

typedef std::stack< event\_list > EventStack

Provides a stack of event-lists for use with the undo and redo facility.

# **Private Member Functions**

- sequence & operator= (const sequence &rhs)
- · bool event in range (const event &e, midibyte status, midipulse tick s, midipulse tick f) const

A convenience function used a couple of times.

void set parent (perform \*p)

'Setter' function for member m\_parent Sets the "parent" of this sequence, so that it can get some extra information about the performance.

• void put\_event\_on\_bus (event &ev)

Takes an event that this sequence is holding, and places it on the MIDI buss.

void set\_trigger\_offset (midipulse trigger\_offset)

Sets m trigger offset and wraps it to m length.

void adjust\_trigger\_offsets\_to\_length (midipulse newlen)

Adjusts trigger offsets to the length specified for all triggers, and undo triggers.

- midipulse adjust\_offset (midipulse offset)
- void remove (event list::iterator i)

A helper function, which does not lock/unlock, so it is unsafe to call without supplying an iterator from the event-list.

· void remove (event &e)

A helper function, which does not lock/unlock, so it is unsafe to call without supplying an iterator from the event-list.

· void remove all ()

Clears all events from the event container.

bool channel\_match (const event &e) const

Checks to see if the event's channel matches the sequence's nominal channel.

#### **Private Attributes**

• perform \* m\_parent

For pause support, we need a way for the sequence to find out if JACK transport is active.

event\_list m\_events

This list holds the current pattern/sequence events.

· triggers m\_triggers

The triggers associated with the sequence, used in the performance/song editor.

event\_list m\_events\_undo\_hold

Provides a list of event actions to undo for the Stazed LFO and segdata support.

· bool m have undo

A stazed flag indicating that we have some undo information.

bool m\_have\_redo

A stazed flag indicating that we have some redo information.

· EventStack m events undo

Provides a list of event actions to undo.

EventStack m\_events\_redo

Provides a list of event actions to redo.

· event\_list::iterator m\_iterator\_draw

An iterator for drawing events.

bool m\_channel\_match

A new feature for recording, based on a "stazed" feature.

• midibyte m\_midi\_channel

Contains the proper MIDI channel for this sequence.

midibyte m\_bus

Contains the proper MIDI bus number for this sequence.

bool m\_song\_mute

Provides a flag for the song playback mode muting.

· bool m transposable

Indicate if the sequence is transposable or not.

int m\_notes\_on

Provides a member to hold the polyphonic step-edit note counter.

· mastermidibus \* m masterbus

Provides the master MIDI buss which handles the output of the sequence to the proper buss and MIDI channel.

int m\_playing\_notes [SEQ64\_MIDI\_NOTES\_MAX]

Provides a "map" for Note On events.

bool m\_was\_playing

Indicates if the sequence was playing.

bool m\_playing

True if sequence playback currently is in progress for this sequence.

· bool m\_recording

True if sequence recording currently is in progress for this sequence.

• bool m\_quantized\_rec

True if recoring in quantized mode.

· bool m\_thru

True if recoring in MIDI-through mode.

· bool m\_queued

True if the events are queued.

· bool m\_dirty\_main

These flags indicate that the content of the sequence has changed due to recording, editing, performance management, or even (?) a name change.

· bool m\_dirty\_edit

Provides the main is-edited flag.

· bool m\_dirty\_perf

Provides performance dirty flagflag.

bool m\_dirty\_names

Provides the names dirtiness flag.

bool m\_editing

Indicates that the sequence is currently being edited.

· bool m raise

Used in seqmenu and seqedit.

std::string m\_name

Provides the name/title for the sequence.

midipulse m\_last\_tick

These members manage where we are in the playing of this sequence, including triggering.

midipulse m\_queued\_tick

Provides the next tick to play?

midipulse m\_trigger\_offset

Provides the trigger offset.

• const int m\_maxbeats

This constant provides the scaling used to calculate the time position in ticks (pulses), based also on the PPQN value.

• int m\_ppqn

Holds the PPQN value for this sequence, so that we don't have to rely on a global constant value.

int m\_seq\_number

A new member so that the sequence number is carried along with the sequence.

· midipulse m length

Holds the length of the sequence in pulses (ticks).

midipulse m\_snap\_tick

The size of snap in units of pulses (ticks).

· int m time beats per measure

Provides the number of beats per bar used in this sequence.

int m\_time\_beat\_width

Provides with width of a beat.

· int m clocks per metronome

Augments the beats/bar and beat-width with the additional values included in a Time Signature meta event.

• int m\_32nds\_per\_quarter

Augments the beats/bar and beat-width with the additional values included in a Time Signature meta event.

long m\_us\_per\_quarter\_note

Augments the beats/bar and beat-width with the additional values included in a Tempo meta event.

· int m rec vol

The volume to be used when recording.

int m\_note\_on\_velocity

The Note On velocity used.

• int m\_note\_off\_velocity

The Note Off velocity used.

midibyte m\_musical\_key

Holds a copy of the musical key for this sequence, which we now support writing to this sequence.

· midibyte m musical scale

Holds a copy of the musical scale for this sequence, which we now support writing to this sequence.

int m\_background\_sequence

Holds a copy of the background sequence number for this sequence, which we now support writing to this sequence.

• mutex m\_mutex

Provides locking for the sequence.

const midipulse m\_note\_off\_margin

Provides the number of ticks to shave off of the end of painted notes.

## **Static Private Attributes**

· static event\_list m\_events\_clipboard

A static clipboard for holding pattern/sequence events.

# **Friends**

- class perform
- · class triggers

## 13.67.1 Detailed Description

More members than you can shake a stick at.

# 13.67.2 Member Typedef Documentation

# 13.67.2.1 EventStack

```
typedef std::stack<event_list> seq64::sequence::EventStack [private]
```

## 13.67.3 Member Enumeration Documentation

# 13.67.3.1 select\_action\_e

```
enum seq64::sequence::select_action_e
```

Se the select\_note\_events() and select\_events() functions.

#### Enumerator

e_select	Selection in progress.
e_select_one	To select a single event.
e_is_selected	The events are selected.
e_would_select	The events would be selected.
e_deselect	To deselect event under the cursor.
e_toggle_selection	Toggle selection under cursor.
e_remove_one	To remove one note under the cursor.

# 13.67.4 Constructor & Destructor Documentation

# 13.67.4.1 sequence()

```
seq64::sequence::sequence ( int ppqn = SEQ64_USE_DEFAULT_PPQN )
```

#### **Parameters**

ppqn Provides the PPQN parameter to perhaps alter the default PPQN value of this sequence.

# 13.67.4.2 $\sim$ sequence()

```
seq64::sequence::\sim sequence ( )
```

# 13.67.5 Member Function Documentation

# 13.67.5.1 operator=()

const sequence & rhs )

We're replacing that incomplete function (many members are not assigned) with the more accurately-named partial\_assign() function.

It did not assign them all, so we created this partial\_assign() function to do this work, and replaced operator =() with this function in client code.

*rhs* Provides the source of the new member values.

```
13.67.5.3 events() [1/2]
event_list& seq64::sequence::events ( ) [inline]
13.67.5.4 events() [2/2]
const event_list& seq64::sequence::events ( ) const [inline]
13.67.5.5 any_selected_notes()
bool seq64::sequence::any_selected_notes ( ) const [inline]
13.67.5.6 triggerlist() [1/2]
const triggers::List& seq64::sequence::triggerlist ( ) const [inline]
13.67.5.7 triggerlist() [2/2]
triggers::List& seq64::sequence::triggerlist ( ) [inline]
13.67.5.8 get_trigger_count()
int seq64::sequence::get_trigger_count ( ) const [inline]
13.67.5.9 set_trigger_paste_tick()
void seq64::sequence::set_trigger_paste_tick (
             midipulse tick ) [inline]
13.67.5.10 get_trigger_paste_tick()
midipulse seq64::sequence::get_trigger_paste_tick ( ) const [inline]
13.67.5.11 number() [1/2]
int seq64::sequence::number ( ) const [inline]
```

One minor issue is how can we unmodify the performance? We'd need to keep a count/stack of modifications over all sequences in the performance. Probably not practical, in general. We will probably keep track of the modification of the buss (port) and channel numbers, as per GitHub Issue #47..

```
13.67.5.14 event_count()
int seq64::sequence::event_count ( ) const
```

Note that only playable events are counted in a sequence. If a sequence class function provides a mutex, call m\_events.count() instead.

## Threadsafe

## Returns

Returns m\_events.count().

#### 13.67.5.15 set\_hold\_undo()

#### **Parameters**

hold

If true, then the events in the m\_events container are added to the m\_events\_undo\_hold container. Otherwise, that container is cleared.

# 13.67.5.16 get\_hold\_undo()

```
int seq64::sequence::get_hold_undo ( ) const [inline]
```

# 13.67.5.17 set\_have\_undo()

```
void seq64::sequence::set_have_undo ( ) [inline]
```

#### Threadsafe

## **Parameters**

hold

A new parameter for the stazed undo/redo support, not yet used. If true, then the events go into the undo-hold-list.

```
13.67.5.22 pop_undo()

void seq64::sequence::pop_undo ( )
```

We would like to be able to set perform's modify flag to false here, but other sequences might still be in a modified state. We could add a modify flag to sequence, and falsify that flag here. Something to think about.

Threadsafe

```
13.67.5.23 pop_redo()

void seq64::sequence::pop_redo ( )

Threadsafe

13.67.5.24 push_trigger_undo()

void seq64::sequence::push_trigger_undo ( )
```

```
13.67.5.25 pop_trigger_undo()
void seq64::sequence::pop_trigger_undo ( )
Threadsafe
13.67.5.26 pop_trigger_redo()
void seq64::sequence::pop_trigger_redo ( )
Threadsafe

long seq64::sequence::us_per_quarter_note ( ) const [inline]
13.67.5.43 set_rec_vol()
void seq64::sequence::set_rec_vol (
            int recvol )
Threadsafe
```

recvol

13.67.5.44 set\_song\_mute()

The new setting of the recording volume setting. It is used only if it ranges from 0 to SEQ64\_MAX\_NOTE\_ON\_VELOCITY.

```
void seq64::sequence::set_song_mute (
             bool mute ) [inline]
13.67.5.45 toggle_song_mute()
void seq64::sequence::toggle_song_mute ( ) [inline]
13.67.5.46 get_song_mute()
bool seq64::sequence::get_song_mute ( ) const [inline]
13.67.5.47 apply_song_transpose()
```

void seq64::sequence::apply\_song\_transpose ( )

```
13.67.5.48 set_transposable()
```

```
void seq64::sequence::set_transposable (
          bool flag )
```

Note that when a sequence is being read from a MIDI file, it will not yet have a parent, so we have to check for that before setting the perform modify flag.

```
13.67.5.49 get_transposable()
bool seq64::sequence::get_transposable ( ) const [inline]
13.67.5.50 get_name()
const char* seq64::sequence::get_name ( ) const [inline]
Deprecated
13.67.5.51 name()
const std::string& seq64::sequence::name ( ) const [inline]
13.67.5.52 set_editing()
void seq64::sequence::set_editing (
            bool edit ) [inline]
13.67.5.53 get_editing()
bool seq64::sequence::get_editing ( ) const [inline]
13.67.5.54 set_raise()
void seq64::sequence::set_raise (
            bool edit ) [inline]
13.67.5.55 get_raise()
bool seq64::sequence::get_raise (
```

void ) const [inline]

#### 13.67.5.56 set\_length()

```
void seq64::sequence::set_length (
          midipulse len = 0,
          bool adjust_triggers = true,
          bool verify = true )
```

This function is called in seqedit::apply\_length(), when the user selects a sequence length in measures. This function is also called when reading a MIDI file.

There's an issue, though. If the application is compiled to use the original std::list container for MIDI events, that implementation sorts the container after every event insertion. If the application is compiled to used the std::map container (to speed up the reading of large MIDI files *greatly*), sorting happens automatically. But, if we use the original std::list implementation, but leave the sorting until later (to speed up the reading of large MIDI files *greatly*), then the verify\_and\_link() call that happens with every new event happens before the events are sorted, and the result is elongated notes showing up in the pattern slot in the main window. Therefore, we need a way to skip the verification when reading a MIDI file, and do the verification only after all events are read.

That function calculates the length in ticks:

```
L = M x B x 4 x P / W
L == length (ticks or pulses)
M == number of measures
B == beats per measure
P == pulses per quarter-note
W == beat width in beats per measure

For our "b4uacuse" MIDI file, M can be about 100 measures, B is 4,
P can be 192 (but we want to support higher values), and W is 4.
So L = 100 * 4 * 4 * 192 / 4 = 76800 ticks. Seems small.
```

## Threadsafe

#### **Parameters**

len	The length value to be set. If it is smaller than ppqn/4, then it is set to that value, unless it is zero, in which case m_length is used and does not change. It also sets the length value for the sequence's triggers.
adjust_triggers	If true, m_triggers.adjust_offsets_to_length() is called. The value defaults to true.
verify	This new parameter defaults to true. If true, verify_and_link() is called. Otherwise, it is not, and the caller should call this function with the default value after reading all the events.

```
13.67.5.57 get_length()
midipulse seq64::sequence::get_length ( ) const [inline]
13.67.5.58 get_last_tick()
midipulse seq64::sequence::get_last_tick ( )
```

If  $m_{ength}$  is 0, this function returns  $m_{ength}$  are tick -  $m_{ength}$  are trigger\_offset, to avoid an arithmetic exception. Should we return 0 instead?

Note that seqroll calls this function to help get the location of the progress bar. What does perfedit do?

When playing, and the sequencer is running, notes get dumped to the ALSA buffers.

#### **Parameters**

13.67.5.62 get\_playing()

p Provides the playing status to set. True means to turn on the playing, false means to turn it off, and turn off any notes still playing.

```
bool seq64::sequence::get_playing ( ) const [inline]

13.67.5.63 toggle_playing()
```

How exactly does this differ from toggling the mute status?

void seq64::sequence::toggle\_playing ( ) [inline]

```
13.67.5.64 toggle_queued()
void seq64::sequence::toggle_queued ( )
```

Also calculates the queued tick based on m\_last\_tick.

```
13.67.5.65 off_queued()
void seq64::sequence::off_queued ( )
Do we need to set m_queued_tick as in toggle_queued()? Currently not used.
Threadsafe
13.67.5.66 on_queued()
void seq64::sequence::on_queued ( )
Do we need to set m_queued_tick as in toggle_queued()? Currently not used.
Threadsafe
13.67.5.67 get_queued()
bool seq64::sequence::get_queued ( ) const [inline]
13.67.5.68 get_queued_tick()
midipulse seq64::sequence::get_queued_tick ( ) const [inline]
13.67.5.69 check_queued_tick()
bool seq64::sequence::check_queued_tick (
              midipulse tick ) const [inline]
13.67.5.70 set_recording()
void seq64::sequence::set_recording (
             bool r )
Threadsafe
13.67.5.71 get_recording()
bool seq64::sequence::get_recording ( ) const [inline]
13.67.5.72 set_snap_tick()
void seq64::sequence::set_snap_tick (
             int st )
```

```
13.67.5.73 set_quantized_rec()
void seq64::sequence::set_quantized_rec (
             bool qr )
Threadsafe
13.67.5.74 get_quantized_rec()
bool seq64::sequence::get_quantized_rec ( ) const [inline]
13.67.5.75 set_thru()
void seq64::sequence::set_thru (
             bool r )
Threadsafe
13.67.5.76 get_thru()
bool seq64::sequence::get_thru ( ) const [inline]
13.67.5.77 is_dirty_main()
bool seq64::sequence::is_dirty_main ( )
resets it). This flag signals that a redraw is needed from recording.
Threadsafe
Returns
     Returns the dirty status.
13.67.5.78 is_dirty_edit()
bool seq64::sequence::is_dirty_edit ( )
The m_dirty_edit flag is set by the function set_dirty().
Threadsafe
Returns
```

Returns the dirty status.

```
13.67.5.79 is_dirty_perf()
bool seq64::sequence::is_dirty_perf ( )
Threadsafe
Returns
     Returns the dirty status.
13.67.5.80 is_dirty_names()
bool seq64::sequence::is_dirty_names ( )
Not sure that we need to lock a boolean on modern processors.
Threadsafe
Returns
     Returns the dirty status.
13.67.5.81 set_dirty_mp()
void seq64::sequence::set_dirty_mp ( )
These flags are meant for causing user-interface refreshes, not for performance modification.
m_dirty_names is set to false in is_dirty_names(); m_dirty_names is set to false in is_dirty_main(); m_dirty_names
is set to false in is_dirty_perf().
Not threadsafe
13.67.5.82 set_dirty()
void seq64::sequence::set_dirty ( )
Threadsafe
13.67.5.83 get_midi_channel()
midibyte seq64::sequence::get_midi_channel ( ) const [inline]
13.67.5.84 is_smf_0()
bool seq64::sequence::is_smf_0 ( ) const [inline]
13.67.5.85 set_midi_channel()
void seq64::sequence::set_midi_channel (
              midibyte ch,
              bool user_change = false )
```

ch	The MIDI channel to set as the channel number for this sequence.
user_change	If true (the default value is false), the user has decided to change this value, and we might need to modify the perform's dirty flag, so that the user gets prompted for a change, This is a response to GitHub issue #47, where channel changes do not cause a prompt to save the sequence.

This function is called by the sequencer thread, performance. The tick comes in as global tick.

It turns the sequence off after we play in this frame.

## Note

With pause support, the progress bar for the pattern/sequence editor does what we want: pause with the pause button, and rewind with the stop button. Works with JACK, with issues, but we'd like to have the stop button do a rewind in JACK, too.

# **Parameters**

tick	Provides the current end-tick value.
playback_mode	Provides how playback is managed. True indicates that it is performance/song-editor playback, controlled by the set of patterns and triggers set up in that editor, and saved with the song in seq24 format. False indicates that the playback is controlled by the main windows, in live mode.

## 13.67.5.89 play\_queue()

Starts the playing of a pattern/sequence. This function just has the sequence dump its events. It ignores the sequence if it has no playable MIDI events.

Change Note ca 2016-10-12 Issue #39. Removed the check for a non-zero event count. This lets the seqroll show the progress bar in motion.

#### **Parameters**

tick Provides		Provides the tick/pulse from which to start playing.
pla	ybackmode	Indicates if the playback is in live mode (false) or song mode (true).

#### 13.67.5.90 add\_note()

```
void seq64::sequence::add_note (
    midipulse tick,
    midipulse len,
    int note,
    bool paint = false )
```

It adds a single note-on / note-off pair.

The paint parameter indicates if we care about the painted event, so then the function runs though the events and deletes the painted ones that overlap the ones we want to add.

Also note that push\_undo() is not incorporated into this function, for the sake of speed.

Here, we could ignore events not on the sequence's channel, as an option. We have to be careful because this function can be used in painting notes.

## Stazed:

```
http://www.blitter.com/~russtopia/MIDI/~jglatt/tech/midispec.htm

Note Off: The first data is the note number. There are 128 possible notes on a MIDI device, numbered 0 to 127 (where Middle C is note number 60). This indicates which note should be released. The second data byte is the velocity, a value from 0 to 127. This indicates how quickly the note should be released (where 127 is the fastest). It's up to a MIDI device how it uses velocity information. Often velocity will be used to tailor the VCA release time. MIDI devices that can generate Note Off messages, but don't implement velocity features, will transmit Note Off messages with a preset velocity of 64.
```

Also, we now see that seq24 never used the recording-velocity member (m\_rec\_vol). We use it to modify the new m note on velocity member if the user changes it in the segedit window.

tick	The time destination of the new note, in pulses.	
len The duration of the new note, in pulses.		
note	The pitch destination of the new note.	
paint If true, repaint the whole set of events, in order to be left with a clean view of the inserted even		
	default is false.	

Then it reset the draw-marker and sets the dirty flag.

Currently, when reading a MIDI file [see the midifile::parse() function], only the main events (notes, after-touch, pitch, program changes, etc.) are added with this function. So, we can rely on reading only playable events into a sequence. Well, actually, certain meta-events are also read, to obtain channel, buss, and more settings. Also read for a sequence, if the global-sequence flag is not set, are the new key, scale, and background sequence parameters.

This module (sequencer) adds all of those events as well, but it can surely add other events. We should assume that any events added by sequencer are playable/usable.

Here, we could ignore events not on the sequence's channel, as an option. We have to be careful because this function can be used in painting events.

# Threadsafe

#### Warning

This pushing (and, in writing the MIDI file, the popping), causes events with identical timestamps to be written in reverse order. Doesn't affect functionality, but it's puzzling until one understands what is happening. Actually, this is true only in Seq24, we've fixed that behavior for Sequencer64.

#### **Parameters**

er Provide a reference to the event to be added; the event is copied into the events container.

## Returns

Returns true if the event was added.

## 13.67.5.92 add\_chord()

If SEQ64 STAZED CHORD GENERATOR is not defined, it devolves to add note().

chord	If greater than 0 (and less than c_chord_number), a chord (multiple notes) will be generated using this chord in the c_chord_table[] array. Otherwise, only a single note will be added.
tick	The time destination of the new note, in pulses.
len	The duration of the new note, in pulses.
note The pitch destination of the new note.	

The paint parameter indicates if we care about the painted event, so then the function runs though the events and deletes the painted ones that overlap the ones we want to add.

## Threadsafe

## **Parameters**

tick	The time destination of the event.
status	The type of event to add.
d0	The first data byte for the event.
d1	The second data byte for the event (if needed).
paint	If true, the inserted event is marked for painting.

## 13.67.5.94 append\_event()

This function is meant mainly for reading the MIDI file, to save a lot of time.

# **Parameters**

er Provide a reference to the event to be added; the event is copied into the events container.

# Returns

Returns true if the event was added.

#### 13.67.5.95 sort\_events()

```
void seq64::sequence::sort_events ( ) [inline]
```

# 13.67.5.96 add\_trigger()

A pass-through function that calls triggers::add(). See that function for more details.

## Threadsafe

## **Parameters**

tick	The time destination of the trigger.
len	The duration of the trigger.
offset	The performance offset of the trigger.
fixoffset	If true, adjust the offset.

# 13.67.5.97 split\_trigger()

This is the public overload of split\_trigger.

# Threadsafe

## **Parameters**

splittick	The time location of the split.
-----------	---------------------------------

# 13.67.5.98 grow\_trigger()

See triggers::grow() for more information.

#### **Parameters**

tickfrom	The desired from-value back which to expand the trigger, if necessary.
tickto	The desired to-value towards which to expand the trigger, if necessary.
len	The additional length to append to tickto for the check.

## 13.67.5.99 del\_trigger()

See triggers::remove().

Threadsafe

## **Parameters**

*tick* Provides the tick to be used for finding the trigger to be erased.

## 13.67.5.100 get\_trigger\_state()

If any trigger is found to bracket that tick, then true is returned.

#### **Parameters**

*tick* Provides the tick of interest.

## Returns

Returns true if a trigger is found that brackets the given tick.

# 13.67.5.101 select\_trigger()

If any trigger is found to bracket that tick, then true is returned, and the trigger is marked as selected.

## **Parameters**

tick Provides the tick of interest.

# Returns

Returns true if a trigger is found that brackets the given tick; this is the return value of m\_triggers.select().

## 13.67.5.102 get\_triggers()

```
triggers::List seq64::sequence::get_triggers ( ) const
```

This function is basically a threadsafe version of sequence::triggerlist().

#### Returns

Returns of copy of m\_triggers.triggerlist().

#### 13.67.5.103 unselect\_triggers()

```
bool seq64::sequence::unselect_triggers ( )
```

#### Returns

Returns the m\_triggers.unselect() return value.

## 13.67.5.104 intersect\_triggers()

If the given position is between the current trigger's tick-start and tick-end values, the these values are copied to the start and end parameters, respectively, and then we exit. See triggers::intersect().

#### Threadsafe

# **Parameters**

position	The position to examine.
start	The destination for the starting tick of the matching trigger.
ender	The destination for the ending tick of the matching trigger.

#### Returns

Returns true if a trigger was found whose start/end ticks contained the position. Otherwise, false is returned, and the start and end return parameters should not be used.

# 13.67.5.105 intersect\_notes()

If the given position is between the current notes on and off time values, values, the these values are copied to the start and end parameters, respectively, the note value is copied to the note parameter, and then we exit.

	position	The position to examine.
	position_note	I think this is the note value we might be looking for ???
out	start	The destination for the starting timestamp of the matching note.
out	ender	The destination for the ending timestamp of the matching note.
out	note	The destination for the note of the matching event. Why is this an int value???

#### Returns

Returns true if a event was found whose start/end ticks contained the position. Otherwise, false is returned, and the start and end return parameters should not be used.

## 13.67.5.106 intersect\_events()

If the given position is between the current notes's timestamp-start and timestamp-end values, the these values are copied to the posstart and posend parameters, respectively, and then we exit.

## Threadsafe

## **Parameters**

posstart	The starting position to examine.
posend	The ending position to examine.
status	The desired status value.
start	The destination for the starting timestamp of the matching trigger.

## Returns

Returns true if a event was found whose start/end timestamps contained the position. Otherwise, false is returned, and the start and end return parameters should not be used.

# 13.67.5.107 del\_selected\_trigger()

```
void seq64::sequence::del_selected_trigger ( )

13.67.5.108 cut_selected_trigger()
```

void seq64::sequence::cut\_selected\_trigger ( )

```
13.67.5.109 copy_selected_trigger()
```

```
void seq64::sequence::copy_selected_trigger ( )
```

Then it copies the first selected trigger that is found.

# 13.67.5.110 paste\_trigger()

Why isn't this protected by a mutex? We will enable this if anything bad happens, such as a deadlock, or corruption, that we can prove happens here.

## **Parameters**

paste_tick	A new parameter that provides the tick for pasting, or SEQ64_NO_PASTE_TRIGGER (-1) if there	1
	is none.	

## 13.67.5.111 move\_selected\_triggers\_to()

## Threadsafe

## **Parameters**

tick	The tick at which the trigger starts.
adjustoffset	Set to true if the offset is to be adjusted.
which	Selects which movement will be done, as discussed above.

## Returns

Returns the value of triggers::move\_selected(), which indicate that the movement could be made. Used in Seq24PerfInput::handle\_motion\_key().

## 13.67.5.112 selected\_trigger\_start()

```
midipulse seq64::sequence::selected_trigger_start ( )
```

# Threadsafe

## Returns

Returns the tick\_start() value of the last-selected trigger. If no triggers are selected, then -1 is returned.

# 13.67.5.113 selected\_trigger\_end()

```
midipulse seq64::sequence::selected_trigger_end ( )
```

## Threadsafe

## Returns

Returns the tick\_end() value of the last-selected trigger. If no triggers are selected, then -1 is returned.

# 13.67.5.114 get\_max\_trigger()

```
midipulse seq64::sequence::get_max_trigger ( )
```

# Threadsafe

#### Returns

Returns the maximum trigger value.

# 13.67.5.115 move\_triggers()

Note the dependence on the m\_length member being kept in sync with the parent's value of m\_length.

# Threadsafe

#### **Parameters**

Ī	starttick	The current location of the triggers.
Ī	distance	The distance away from the current location to which to move the triggers.
Ī	direction	If true, the triggers are moved forward. If false, the triggers are moved backward.

# 13.67.5.116 copy\_triggers()

# Threadsafe

## **Parameters**

starttick	The current location of the triggers.
distance	The distance away from the current location to which to copy the triggers.

```
13.67.5.117 clear_triggers()
```

```
void seq64::sequence::clear_triggers ( )
```

## Threadsafe

# 13.67.5.118 get\_trigger\_offset()

```
midipulse seq64::sequence::get_trigger_offset ( ) const [inline]
```

# 13.67.5.119 set\_midi\_bus()

## Threadsafe

# **Parameters**

mb	The MIDI buss to set as the buss number for this sequence. Also called the "MIDI port" number.
user_change	If true (the default value is false), the user has decided to change this value, and we might need to modify the perform's dirty flag, so that the user gets prompted for a change, This is a response to GitHub issue #47, where buss changes do not cause a prompt to save the sequence.

```
13.67.5.120 get_midi_bus()
```

```
char seq64::sequence::get_midi_bus ( ) const [inline]
```

# 13.67.5.121 set\_master\_midi\_bus()

#### Threadsafe

#### **Parameters**

mmb Provides a pointer to the master MIDI buss for this sequence. This should be a reference, but isn't, nor is it checked.

# 13.67.5.122 select\_note\_events()

Be aware the the event::is\_note() function is used, and that it includes Aftertouch events, which generally need to stick with their Note On counterparts.

If a "note" event is detected, then we skip it. This is necessary since channel pressure and control change use d0 for seqdata, and d0 is returned by get\_note(). This causes note selection to occasionally select them when their seqdata values are within range of the tick selection. So therefore we want only Note Ons and Note Offs.

#### Note

The continuation below ("continue") is necessary since channel pressure and control change use d0 for sequata [which is returned by get\_note()]. This causes seqroll note selection to occasionally select them when their sequata values are within the range of tick selection. So only, note ons and offs. What about Aftertouch? We have the event::is\_note() function for that.

# Parameters

tick_s	The starting tick.
note⊷	The highest note selected.
_h	
tick_f	The ending, or finishing, tick.
note⊷	The lowest note selected.
_/	
action	The action to perform on the selection.

#### Returns

Returns the number of notes selected.

```
midibyte cc,
select_action_e action )
```

Note that there is also an overloaded version of this function.

# Threadsafe

## **Parameters**

tick⊷	The start time of the selection.
_s	
tick←	The finish time of the selection.
_f	
status	The desired event in the selection.
СС	The desired control-change in the selection, if the event is a control-change.
action	The desired selection action.

## Returns

Returns the number of events selected.

Note that there is also an overloaded version of this function.

# Threadsafe

# Warning

This used to be a void function, so it just returns 0 for now.

# Parameters

status	Provides the status value to be selected.
cc	If the status is EVENT_CONTROL_CHANGE, then data byte 0 must match this value.
inverse	If true, invert the selection.

#### Returns

Always returns 0.

```
midipulse tick_f,
    midibyte status )

13.67.5.126 select_event_handle()

int seq64::sequence::select_event_handle (
    midipulse tick_s,
    midipulse tick_f,
    midibyte status,
    midibyte cc,
```

int dats )

## **Parameters**

tick←	Provides the starting tick.
_s	
tick←	Provides the ending (finishing) tick.
_f	
status	Provides the desired MIDI event to be selected.
СС	Provides the desired MIDI control value to be selected.
dats	Provides the center of a small data value range of plus or minus 2.

## Returns

Returns the number of events selected.

# 13.67.5.127 select\_linked()

## **Parameters**

tick←	Provides the starting tick.
_s	
tick←	Provides the ending (finishing) tick.
_f	
status	Provides the desired MIDI event to be selected.

## Returns

Returns the number of notes selected.

# 13.67.5.128 select\_even\_or\_odd\_notes()

Enabled only if USE\_STAZED\_ODD\_EVEN\_SELECTION is defined.

#### **Parameters**

note_len	The desired note lengths for the selection.
even	True if we want the even notes.

#### Returns

Returns the number of notes selected.

## 13.67.5.129 select\_all\_notes()

What about Aftertouch events? I think we need to select them as well in seqedit, so let's add that selection here as well.

## **Parameters**

inverse	If set to true (the default is false), then this causes the selection to be inverted.
---------	---

## 13.67.5.130 get\_num\_selected\_notes()

```
int seq64::sequence::get_num_selected_notes ( ) const
```

## Threadsafe

# Returns

Returns m\_events.count\_selected\_notes().

## 13.67.5.131 get\_num\_selected\_events()

If the event is a control change (CC), then it must also match the given CC value.

# Threadsafe

#### **Parameters**

status	The desired kind of event to count.	
СС	The desired control-change to count, if the event is a control-change.	

#### Returns

Returns m\_events.count\_selected\_events().

```
13.67.5.132 select_all()

void seq64::sequence::select_all ( )

Threadsafe

13.67.5.133 copy_selected()

void seq64::sequence::copy_selected ( )
```

This function also has the danger, discovered by user 0rel, of events being modified after being added to the clipboard. So we add his reconstruction fix here as well. To summarize the steps:

```
-# Clear the m_events_clipboard. NO! If we have no events to
    copy to the clipboard, we do not want to clear it. This kills
    cut-and-paste functionality.
-# Add all selected events in this clipboard to the sequence.
-# Normalize the timestamps of the events in the clip relative to the
    timestamp of the first selected event. (Is this really needed?)
-# Reconstruct/reconstitute the m_events_clipboard.
```

This process is a bit easier to manage than erase/insert on events because std::multimap has no erase() function that returns the next valid iterator. Also, we use a local clipboard first, to save on copying. We've enhanced the error-checking, too.

Finally, note that m\_events\_clipboard is a static member of sequence, so:

```
-# Copying can be done between sequences.
-# Access to it needs to be protected by a mutex.
Threadsafe
```

```
13.67.5.134 cut_selected()
```

Pushes onto the undo stack, may copy the events, marks the selected events, and removes them. Now also sets the dirty flag so that the caller doesn't have to. Also raises the modify flag on the parent perform object.

# Threadsafe

#### **Parameters**

copyevents	If true, copy the selected events before marking and removing them.
------------	---

## 13.67.5.135 paste\_selected()

Also, we've moved external calls to push\_undo() into this function. The caller shouldn't have to do that.

The event\_keys used to access/sort the multimap event\_list is not updated after changing timestamp/rank of the stored events. Regenerating all key/value pairs before merging them solves this issue, so that the order of events in the sequence will be preserved. This action is not needed for moving or growing events. Nor is it needed if the old std::list implementation of the event container is compiled in. However, it is needed in any operation that modifies the timestamp of an event inside the container:

```
- copy_selected()
- paste_selected()
- quantize_events() TODO TODO TODO!
```

The alternative to reconstructing the map is to erase-and-insert the events modified in the code above, rather than just tweaking their values, which have an effect on sorting for the event-map implementation. However, multimap does not provide an erase() function that returns the next valid iterator, which would complicate this method of operation. So we're inclined to stick with this solution.

There was an issue with copy/pasting a whole sequence. The pasted events did not go to their destination, but overlayed the original events. This bugs also occurred in Seq24 0.9.2. It occurs with the allofarow.mid file when doing Ctrl-A Ctrl-C Ctrl-V Move-Mouse Left-Click. It turns out the original code was checking only the first event to see if it was a Note event. For sequences that started with a Control Change or Program Change (or other non-Note events), the highest note was never modified, and none of the note events were adjusted.

Finally, we only want to transpose note events (i.e. alter m\_data[0]), and not other kinds of events. We still need to figure out what to do with aftertouch, though. Currently likely to be covered by the processing of the note that it accompanies.

## Threadsafe

#### **Parameters**

note	The note/pitch destination for the paste. This represents the "y" coordinate of the upper left corner of the paste-box. It will be converted to an offset, for example pasting every event 7 notes higher than the original copy.
tick	The time destination for the paste. This represents the "x" coordinate of the upper left corner of the paste-box. It will be converted to an offset, for example pasting every event 48 ticks forward from the original copy.

## 13.67.5.136 get\_selected\_box()

Note the common-code betweem this function and <a href="get\_clipboard\_box">get\_clipboard\_box</a>(). Also note we could return a boolean indicating if the return values were filled in.

out	tick_s	Side-effect return reference for the start time.
out	note⊷	Side-effect return reference for the high note.
	_h	
out	tick_f	Side-effect return reference for the finish time.
out	note⊷	Side-effect return reference for the low note.
	_/	

# 13.67.5.137 get\_clipboard\_box()

Note the common-code betweem this function and get\_selected\_box(). Also note we could return a boolean indicating if the return values were filled in.

# Threadsafe

#### **Parameters**

out	tick_s	Side-effect return reference for the start time.
out	note⊷	Side-effect return reference for the high note.
	_h	
out	tick_f	Side-effect return reference for the finish time.
out	note⊷	Side-effect return reference for the low note.
	_1	

# 13.67.5.138 adjust\_timestamp()

- If the timestamp plus the delta is greater that m\_length, we do round robin magic.
- If the timestamp is greater than m\_length, then it is wrapped around to the beginning.
- If the timestamp equals m\_length, then it is set to 0, and later, trimmed.
- If the timestamp is less than 0, then it is set to the end.

Taken from similar code in move\_selected\_notes() and grow\_selected(). Be careful using this function.

## **Parameters**

t	Provides the timestamp to be adjusted based on m_length.
isnoteoff	Used for "expanding" the timestamp from 0 to just less than m_length, if necessary. Should be set
	to true only for Note Off events; it defaults to false, which means to wrap the events around the end
	of the sequence if necessary, and is used only in movement, not in growth.

#### Returns

Returns the adjusted timestamp.

#### 13.67.5.139 trim\_timestamp()

Similar to adjust\_timestamp, but it doesn't have an isnoteoff parameter.

#### **Parameters**

t Provides the timestamp to be adjusted based on m\_length.

## Returns

Returns the adjusted timestamp.

### 13.67.5.140 clip\_timestamp()

If the new (off) timestamp is less than the on-time, it is clipped to the snap value. If it is greater than the length of the sequence, then it is clipped to the sequence length. No wrap-around.

#### **Parameters**

ontime	Provides the original time, which limits the amount of negative adjustment that can be done.
offtime	Provides the timestamp to be adjusted and clipped.

#### Returns

Returns the adjusted timestamp.

#### 13.67.5.141 move\_selected\_notes()

Also currently moves any other events in the range of the selection.

Also, we've moved external calls to push\_undo() into this function. The caller shouldn't have to do that.

Another thing this function does is wrap-around when movement occurs. Any events (except Note Off) that will start just after the END of the pattern will be wrapped around to the beginning of the pattern.

#### Fixed:

Select all notes in a short pattern that starts at time 0 and has non-note events starting at time 0 (see contrib/midi/allofarow.mid); move them with the right arrow, and move them back with the left arrow; then view in the event editor, and see that the non-Note events have not moved back, and in fact move way too far to the right, actually to near the END marker. We've fixed that in the new adjust\_timestamp() function.

This function checks for any marked events in seq24, but now we make sure the event is a Note On or Note Off event before dealing with it. We now handle properly events like Program Change, Control Change, and Pitch Wheel. Remember that Aftertouch is treated like a note, as it has velocity. For non-Notes, event::get\_note() returns m data[0], and we don't want to adjust that.

#### Note

We leave a small gap where mark\_selected() locks and unlocks, then we lock again. This should only be an issue if moving notes while the sequence is playing.

#### **Parameters**

delta_tick	Provides the amount of time to move the selected notes. Note that it also applies to events.  Note-Off events are expanded to m_length if their timestamp would be 0. All other events will wrap around to 0.
delta_note	Provides the amount of pitch to move the selected notes. This value is applied only to Note (On and Off) events. Also, if this value would bring a note outside the range of 0 to 127, that note is not changed and the event is not moved.

## 13.67.5.142 stream\_event()

The event's timestamp is adjusted, if needed. If recording:

```
If the pattern is playing, the event is added.
If the pattern is playing and quantized record is in force, the note's timestamp is altered.
If not playing, but the event is a Note On or Note Off, we add it and keep track of it.
```

If MIDI Thru is enabled, the event is put on the buss.

We are adding a feature where events are rejected if their channel doesn't match that of the sequence. This has been a complaint of some people. Could modify the add\_event() and add\_note() functions, but better to do it here for comprehensive event support. Also have to make sure the event-channel is preserved before this function is called, and also need to make sure that the channel is appended on both playback and in saving of the MIDI file.

We are also adding the usage, at last, of the m\_rec\_vol member.

**Todo** When we feel like debugging, we will replace the global is-playing call with the parent perform's is-running call.

## Threadsafe

#### **Parameters**

ev Provides the event to stream.

### Returns

Returns true if the event's channel matched that of this sequence, and the channel-matching feature was set to true. Also returns true if we're not using channel-matching. A return value of true means the event should be saved.

# 13.67.5.143 change\_event\_data\_range()

```
bool seq64::sequence::change_event_data_range (
    midipulse tick_s,
    midipulse tick_f,
    midibyte status,
    midibyte cc,
    int data_s,
    int data_f)
```

Changes only selected events, if any.

## Threadsafe

Let t == the current tick value; t == tick start value; t == tick

If this were an interpolation formula it would be:

Something is not quite right; to be investigated.

## **Parameters**

tick⊷	Provides the starting tick value.
_s	
tick⊷	Provides the ending tick value.
_f	
status	Provides the event status that is to be changed.
СС	Provides the event control value.
data⊷	Provides the starting data value.
_s	
data⊷	Provides the finishing data value.
_f	

#### Returns

Returns true if the data was changed.

### 13.67.5.144 change\_event\_data\_lfo()

```
void seq64::sequence::change_event_data_lfo (
             double value,
             double range,
             double speed,
             double phase,
             wave_type_t wave,
             midibyte status,
             midibyte cc )
```

### **Parameters**

value	Provides the base value for the event data value. Ranges from 0 to 127 in increments of 0.1. This amount is added to the result of the wave_func() calculation.
range	Provides the range for the event data value. Ranges from 0 to 127 in increments of 0.1.
speed	Provides the inverse periodicity (?) for the modifications. Ranges from 0 to 16 in increments of 0.01. Not sure what units this value is in.
phase	The phase of the event modification. Ranges from 0 to 1 (what units?) in increments of 0.01.
wave	The wave type to apply. Ranges from 1 to 5.
status	The status value for the events to modify.
сс	Provides the control-change value for Control Change events that are to be modified.

### 13.67.5.145 increment\_selected()

```
void seq64::sequence::increment_selected (
            midibyte astat,
            midibyte )
```

### The supported statuses are:

```
- EVENT_NOTE_ON
```

- EVENT\_NOTE\_OFF
   EVENT\_AFTERTOUCH
- EVENT\_CONTROL\_CHANGE
- EVENT\_PITCH\_WHEEL
- EVENT\_PROGRAM\_CHANGE
- EVENT\_CHANNEL\_PRESSURE

## Threadsafe

## **Parameters**

astat	The desired event.

Parameter "acontrol", the desired control-change, is unused. This might be a bug, or at least a missing feature.

### 13.67.5.146 decrement\_selected()

The supported statuses are:

- · One-byte messages
  - EVENT PROGRAM CHANGE
  - EVENT CHANNEL PRESSURE
- · Two-byte messages
  - EVENT NOTE ON
  - EVENT\_NOTE\_OFF
  - EVENT\_AFTERTOUCH
  - EVENT CONTROL CHANGE
  - EVENT\_PITCH\_WHEEL

### Threadsafe

#### **Parameters**

```
astat The desired event.
```

Parameter "acontrol", the desired control-change, is unused. This might be a bug, or at least a missing feature.

And, though it doesn't move Note Off events, it does reconstruct them.

This function is called when doing a ctrl-left mouse move on the selected notes or when using ctrl-left-arrow or ctrl-right-arrow to shrink or stretch the selected notes. Using the mouse allows pretty much any amount of growth or shrinkage, but use the arrow keys limits the changes to the current snap value.

This function grows/shrinks only Note On events that are marked and linked. If an event is not linked, this function now ignores the event's timestamp, rather than risk a segfault on a null pointer. Compare this function to the stretch selected() and move selected notes() functions.

This function would strip out non-Notes, but now it at least preserves them and moves them, to try to preserve their relative position re the notes.

In any case, we want to mark the original off-event for deletion, otherwise we get duplicate off events, for example in the "Begin/End" pattern in the test.midi file.

This function now tries to prevent pathological growth, such as trying to shrink the notes to zero length or less, or stretch them beyond the length of the sequence. Otherwise we get weird and unexpected results. Also, we've moved external calls to <a href="mailto:push\_undo">push\_undo</a>() into this function. The caller shouldn't have to do that.

A comment on terminology: The user "selects" notes, while the sequencer "marks" notes. The first thing this function does is mark all the selected notes.

Threadsafe

#### **Parameters**

delta An offset for each linked event's timestamp.

## 13.67.5.148 stretch\_selected()

This should move a note off event, according to old comments, but it doesn't seem to do that. See the grow\_\circ
selected() function. Rather, it moves any event in the selection.

Also, we've moved external calls to push\_undo() into this function. The caller shouldn't have to do that.

#### Threadsafe

#### **Parameters**

delta\_tick | Provides the amount of time to stretch the selected notes.

### 13.67.5.149 remove\_marked()

```
bool seq64::sequence::remove_marked ( )
```

Note how this function forwards the call to m\_event.remove\_marked().

Threadsafe

## Returns

Returns true if at least one event was removed.

## 13.67.5.150 mark\_selected()

```
bool seq64::sequence::mark_selected ( )
```

### Threadsafe

## Returns

Returns true if there were any events that got marked.

#### 13.67.5.151 remove\_selected()

```
void seq64::sequence::remove_selected ( )
```

This is a new convenience function to fold in the push\_undo() and mark\_selected() calls. It makes the process slightly faster, as well.

Threadsafe Also makes the whole process threadsafe.

```
13.67.5.152 unpaint_all()
void seq64::sequence::unpaint_all ( )
Threadsafe
13.67.5.153 unselect()
void seq64::sequence::unselect ( )
Threadsafe
13.67.5.154 verify_and_link()
void seq64::sequence::verify_and_link ( )
Threadsafe
13.67.5.155 link_new()
void seq64::sequence::link_new ( )
Threadsafe
13.67.5.156 zero_markers()
void seq64::sequence::zero_markers ( ) [inline]
```

This function is used when the sequencer stops. This function currently sets  $m_{act} = 0$ , but we would like to avoid that if doing a pause, rather than a stop, of playback. However, commenting out this setting doesn't have any effect that we can see with a quick look at the user-interface.

It flushes a note to the midibus to preview its sound, used by the virtual piano.

## Threadsafe

## Parameters

note The note to play. It is not checked for range validity, for the sake of speed.

## 13.67.5.158 play\_note\_off()

Threadsafe

**Parameters** 

note The note to turn off. It is not checked for range validity, for the sake of speed.

```
13.67.5.159 off_playing_notes()
```

```
void seq64::sequence::off_playing_notes ( )
```

This function does not bother checking if m\_masterbus is a null pointer.

Threadsafe

## 13.67.5.160 pause()

```
void seq64::sequence::pause ( )
```

The reset() function is currently not called when pausing, but we still need the note-shutoff capability to prevent notes from lingering. Note that we do not call set\_playing(false)... it disarms the sequence, which we do not want upon pausing.

## 13.67.5.161 reset()

```
void seq64::sequence::reset (
          bool song_mode )
```

Note that, in live mode, the user controls playback, while otherwise JACK or the performance/song editor controls playback. (We're still a bit confounded about these modes, alas.)

# **Parameters**

song\_mode True if song mode is on. This can mean that JACK transport is not in control of playback.

### 13.67.5.162 reset\_draw\_marker()

```
void seq64::sequence::reset_draw_marker ( )
```

It resets the draw marker so that calls to get next note event() will start from the first event.

## Threadsafe

13.67.5.163 reset\_draw\_trigger\_marker()

void seq64::sequence::reset\_draw\_trigger\_marker ( )

Threadsafe

13.67.5.164 get\_next\_note\_event()

```
draw_type_t seq64::sequence::get_next_note_event (
    midipulse * tick_s,
    midipulse * tick_f,
    int * note,
    bool * selected,
    int * velocity )
```

When it has no more events, returns a false.

Note that, before the first call to draw a sequence, the reset\_draw\_marker() function must be called, to reset m\_← iterator\_draw.

#### **Parameters**

out	tick_s	Provides a pointer destination for the start time.
out	tick_f	Provides a pointer destination for the finish time.
out	note	Provides a pointer destination for the note pitch value Probably should be a midibyte value.
out	selected	Provides a pointer destination for the selection status of the note.
out	velocity	Provides a pointer destination for the note velocity. Probably should be a midibyte value.

13.67.5.165 get\_minmax\_note\_events()

**Todo** For efficency, we should calculate this only when the event set changes, and save the results and return them if good.

#### Threadsafe

#### **Parameters**

	A reference parameter to return the note with the lowest value. if there are no notes, then it is set to SEQ64_MIDI_COUNT_MAX-1.
highest	A reference parameter to return the note with the highest value. if there are no notes, then it is set to -1.

# Returns

If there are no notes in the list, then false is returned, and the results should be disregarded.

Then set the rest of the parameters parameters using that event. If the status is the new value EVENT\_ANY, then any event will be obtained.

Note the usage of event::is\_desired\_cc\_or\_not\_cc(status, cc, \*d0); Either we have a control change with the right CC or it's a different type of event.

#### **Parameters**

status	The type of event to be obtained. The special value EVENT_ANY can be provided so that no event statuses are filtered.	
СС	The continuous controller value that might be desired.	
tick	A pointer return value for the tick value of the next event found.	
d0	A pointer return value for the first data value of the event.	
d1	A pointer return value for the second data value of the event.	
selected	A pointer return value for the is-selected status of the event.	
evtype	A stazed parameter for picking either all event or unselected events.	

Then set the status and control character parameters using that event.

#### **Parameters**

status	Provides a pointer to the MIDI status byte to be set, as a way to retrieve the event.
СС	The return pointer for the control value.

### 13.67.5.168 get\_next\_trigger()

```
bool seq64::sequence::get_next_trigger (
    midipulse * tick_on,
    midipulse * tick_off,
    bool * selected,
    midipulse * tick_offset )
```

#### 13.67.5.169 quantize\_events()

One confusing things is why the original versions of the events don't seem to be deleted.

#### **Parameters**

status	Indicates the type of event to be quantized.
СС	The desired control-change to count, if the event is a control-change.
snap_tick	Provides the maximum amount to move the events. Actually, events are moved to the previous or next snap_tick value depend on whether they are halfway to the next one or not.
divide	A rough indicator of the amount of quantization. The only values used in the application seem to be either 1 or 2.
linked	False by default, this parameter indicates if marked events are to be relinked, as far as we can tell.

### 13.67.5.170 push\_quantize()

```
void seq64::sequence::push_quantize (
    midibyte status,
    midibyte cc,
    midipulse snap_tick,
    int divide,
    bool linked = false )
```

### 13.67.5.171 transpose\_notes()

If the scale value is 0, this is "no scale", which is the chromatic scale, where all 12 notes, including sharps and flats, are part of the scale.

Also, we've moved external calls to push\_undo() into this function. The caller shouldn't have to do that.

## Note

We noticed (ca 2016-06-10) that MIDI aftertouch events need to be transposed, but are not being transposed here. Assuming they are selectable (another question!), the test for note-on and note-off is not sufficient, and so has been replaced by a call to event::is\_note\_msg().

#### **Parameters**

steps	The number of steps to transpose the notes.
scale	The scale to make the notes adhere to while transposing.

```
13.67.5.172 shift_notes()
void seq64::sequence::shift_notes (
             midipulse ticks )
13.67.5.173 multiply_pattern()
void seq64::sequence::multiply_pattern (
             double multiplier )
13.67.5.174 musical_key() [1/2]
midibyte seq64::sequence::musical_key ( ) const [inline]
13.67.5.175 musical_key() [2/2]
void seq64::sequence::musical_key (
             int key ) [inline]
13.67.5.176 musical_scale() [1/2]
midibyte seq64::sequence::musical_scale ( ) const [inline]
13.67.5.177 musical_scale() [2/2]
void seq64::sequence::musical_scale (
             int scale ) [inline]
13.67.5.178 background_sequence() [1/2]
int seq64::sequence::background_sequence ( ) const [inline]
13.67.5.179 background_sequence() [2/2]
void seq64::sequence::background_sequence (
             int bs ) [inline]
Disabling the sequence number (setting it to SEQ64_SEQUENCE_LIMIT) is valid.
13.67.5.180 show_events()
void seq64::sequence::show_events ( ) const
```

13.67.5.181 copy\_events()

Compare this function to the remove\_all() function. Copying the container is a lot of work, but fairly fast, even with an std::multimap as the container.

Threadsafe Note that we had to consolidate the replacement of all the events in the container in order to prevent the "Save to Sequence" button in the eventedit object from causing the application to segfault. It would segfault when the mainwnd timer callback would fire, causing updates to the sequence's slot pixmap, which would then try to access deleted events. Part of the issue was that note links were dropped when copying the events, so now we call verify\_and\_link() to hopefully reconstitute the links.

#### **Parameters**

newevents	Provides the container of MIDI events that will completely replace the current container. Normally	1
	this container is supplied by the event editor, via the eventslots class.	

Makes if-clauses easier to read.

#### **Parameters**

е	Provides the event to be checked.
status	Provides the event type that must be matched.
tick←	The lower end of the range of timestamps that the event must fall within.
_s	
tick←	The upper end of the range of timestamps that the event must fall within.
_f	

## Returns

Returns true if the event matchs all of the restrictions noted.

## 13.67.5.184 set\_parent()

Remember that m\_parent is not at all owned by the sequence. We just don't want to do all the work necessary to make it a reference, at this time.

## **Parameters**

p A pointer to the parent, assigned only if not already assigned.

### 13.67.5.185 put\_event\_on\_bus()

```
void seq64::sequence::put_event_on_bus (
```

```
event & ev ) [private]
```

This function does not bother checking if m\_masterbus is a null pointer.

#### **Parameters**

```
ev The event to put on the buss.
```

### Threadsafe

```
13.67.5.186 set_trigger_offset()
```

If m\_length is 0, then m\_trigger\_offset is simply set to the parameter.

### Threadsafe

#### **Parameters**

trigger_offse	t The full trigger offset to set.
---------------	-----------------------------------

### 13.67.5.187 adjust\_trigger\_offsets\_to\_length()

## Threadsafe

Might can get rid of this function?

### **Parameters**

```
newlength The new length of the adjusted trigger.
```

### 13.67.5.188 adjust\_offset()

We no longer bother checking the pointer. If it is bad, all hope is lost. If the event is a note off, and that note is currently playing, then send a note off.

Not threadsafe

#### **Parameters**

i Provides the iterator to the event to remove from the event list.

Finds the given event in m\_events, and removes the first iterator matching that. If there are events that would match after that, they remain in the container. This matches seq24 behavior.

Not threadsafe

#### **Parameters**

*e* Provides a reference to the event to be removed.

```
13.67.5.191 remove_all()
void seq64::sequence::remove_all ( ) [private]
```

Unsets the modified flag. (Why?) Also see the new copy\_events() function.

```
13.67.5.192 channel_match()
```

#### **Parameters**

e The event whose channel nybble is to be checked.

#### Returns

Returns true if the channel-matching feature is enable and the channels match, or true if the channel-matching feature is turned off.

## 13.67.6 Friends And Related Function Documentation

# 13.67.6.1 perform

```
friend class perform [friend]
```

## 13.67.6.2 triggers

friend class triggers [friend]

### 13.67.7 Field Documentation

```
13.67.7.1 m events clipboard
```

```
event_list seq64::sequence::m_events_clipboard [static], [private]
```

Being static allows for copy/paste between patterns.

```
13.67.7.2 m_parent
```

```
perform* seq64::sequence::m_parent [private]
```

We can use the rc\_settings flag(s), but JACK could be disconnected. We could use a reference here, but, to avoid modifying the midifile class as well, we use a pointer. It is set in <a href="mailto:perform::add\_sequence">perform::add\_sequence</a>(). This member would also be using for passing modification status to the parent, so that the GUI code doesn't have to do it.

```
13.67.7.3 m_events
```

```
event_list seq64::sequence::m_events [private]
```

It used to be called m\_list\_events, but a map implementation is now available, and is the default.

```
13.67.7.4 m_triggers
```

```
triggers seq64::sequence::m_triggers [private]
```

13.67.7.5 m\_events\_undo\_hold

```
event_list seq64::sequence::m_events_undo_hold [private]
```

Changed, of course, from std::list<event> to the sequence::Events typedef.

```
Events m_events_undo_hold;
```

## 13.67.7.6 m\_have\_undo

```
bool seq64::sequence::m_have_undo [private]
```

## 13.67.7.7 m\_have\_redo

```
bool seq64::sequence::m_have_redo [private]
```

Previously, unlike the perfedit, the seqedit did not provide a redo facility.

```
13.67.7.8 m_events_undo
EventStack seq64::sequence::m_events_undo [private]
13.67.7.9 m_events_redo
EventStack seq64::sequence::m_events_redo [private]
13.67.7.10 m_iterator_draw
event_list::iterator seq64::sequence::m_iterator_draw [private]
13.67.7.11 m_channel_match
bool seq64::sequence::m_channel_match [private]
If true (not yet the default), then the seqedit window will record only MIDI events that match its channel. The old
behavior is preserved if this variable is set to false.
13.67.7.12 m_midi_channel
midibyte seq64::sequence::m_midi_channel [private]
However, if this value is EVENT_NULL_CHANNEL (0xFF), then this sequence is an SMF 0 track, and has no single
channel.
13.67.7.13 m_bus
midibyte seq64::sequence::m_bus [private]
13.67.7.14 m_song_mute
bool seq64::sequence::m_song_mute [private]
13.67.7.15 m_transposable
bool seq64::sequence::m_transposable [private]
A potential feature from stazed's seq32 project. Now it is an actual, configurable feature.
13.67.7.16 m_notes_on
```

int seq64::sequence::m\_notes\_on [private]

```
13.67.7.17 m_masterbus
mastermidibus* seq64::sequence::m_masterbus [private]
13.67.7.18 m_playing_notes
int seq64::sequence::m_playing_notes[SEQ64_MIDI_NOTES_MAX] [private]
It is used when muting, to shut off the notes that are playing.
13.67.7.19 m_was_playing
bool seq64::sequence::m_was_playing [private]
13.67.7.20 m_playing
bool seq64::sequence::m_playing [private]
13.67.7.21 m_recording
bool seq64::sequence::m_recording [private]
13.67.7.22 m_quantized_rec
bool seq64::sequence::m_quantized_rec [private]
13.67.7.23 m_thru
bool seq64::sequence::m_thru [private]
13.67.7.24 m_queued
bool seq64::sequence::m_queued [private]
13.67.7.25 m_dirty_main
bool seq64::sequence::m_dirty_main [private]
```

Provides the main dirtiness flag.

```
13.67.7.26 m_dirty_edit
bool seq64::sequence::m_dirty_edit [private]
13.67.7.27 m_dirty_perf
bool seq64::sequence::m_dirty_perf [private]
13.67.7.28 m_dirty_names
bool seq64::sequence::m_dirty_names [private]
13.67.7.29 m_editing
bool seq64::sequence::m_editing [private]
13.67.7.30 m_raise
bool seq64::sequence::m_raise [private]
It allows a sequence editor window to pop up if not already raised, in seqedit::timeout().
13.67.7.31 m_name
std::string seq64::sequence::m_name [private]
13.67.7.32 m_last_tick
midipulse seq64::sequence::m_last_tick [private]
Provides the last tick played.
13.67.7.33 m_queued_tick
midipulse seq64::sequence::m_queued_tick [private]
13.67.7.34 m_trigger_offset
midipulse seq64::sequence::m_trigger_offset [private]
```

```
13.67.7.35 m_maxbeats
const int seq64::sequence::m_maxbeats [private]
Hardwired to c_maxbeats at present.
13.67.7.36 m_ppqn
int seq64::sequence::m_ppqn [private]
13.67.7.37 m_seq_number
int seq64::sequence::m_seq_number [private]
This number is set in the perform::install_sequence() function.
13.67.7.38 m_length
midipulse seq64::sequence::m_length [private]
This value should be a power of two when used as a bar unit.
13.67.7.39 m_snap_tick
midipulse seq64::sequence::m_snap_tick [private]
It starts out as the value m_ppqn / 4.
13.67.7.40 m_time_beats_per_measure
int seq64::sequence::m_time_beats_per_measure [private]
Defaults to 4. Used by the sequence editor to mark things in correct time on the user-interface.
13.67.7.41 m_time_beat_width
int seq64::sequence::m_time_beat_width [private]
Defaults to 4, which means the beat is a quarter note. A value of 8 would mean it is an eighth note. Used by the
```

Defaults to 4, which means the beat is a quarter note. A value of 8 would mean it is an eighth note. Used by the sequence editor to mark things in correct time on the user-interface.

int seq64::sequence::m\_clocks\_per\_metronome [private]

13.67.7.42 m\_clocks\_per\_metronome

This value provides the number of MIDI clocks between metronome clicks. The default value of this item is 24. It can also be read from some SMF 1 files, such as our hymne.mid example.

```
13.67.7.43 m_32nds_per_quarter
```

```
int seq64::sequence::m_32nds_per_quarter [private]
```

This value provides the number of notated 32nd notes in a MIDI quarter note (24 MIDI clocks). The usual (and default) value of this parameter is 8; some sequencers allow this to be changed.

```
13.67.7.44 m_us_per_quarter_note
```

```
long seq64::sequence::m_us_per_quarter_note [private]
```

This value can be extracted from the beats-per-minute value (mastermidibus::m\_beats\_per\_minute), but here we set it to 0 by default, indicating that we don't want to write it. Otherwise, it can be read from a MIDI file, and saved here to be restored later.

```
13.67.7.45 m_rec_vol
```

```
int seq64::sequence::m_rec_vol [private]
```

### 13.67.7.46 m\_note\_on\_velocity

```
int seq64::sequence::m_note_on_velocity [private]
```

Currently set to SEQ64\_DEFAULT\_NOTE\_ON\_VELOCITY. If the recording velocity (m\_rec\_vol) is non-zero, this value will be set to the desired recording velocity. A "stazed" feature.

```
13.67.7.47 m_note_off_velocity
```

```
int seq64::sequence::m_note_off_velocity [private]
```

Currently set to SEQ64\_DEFAULT\_NOTE\_OFF\_VELOCITY, and currently unmodifiable. A "stazed" feature.

```
13.67.7.48 m_musical_key
```

```
midibyte seq64::sequence::m_musical_key [private]
```

If the value is SEQ64\_KEY\_OF\_C, then there is no musical key to be set.

```
13.67.7.49 m_musical_scale
```

```
midibyte seq64::sequence::m_musical_scale [private]
```

If the value is the enumeration value c\_scale\_off, then there is no musical scale to be set.

```
13.67.7.50 m_background_sequence
```

```
int seq64::sequence::m_background_sequence [private]
```

If the value is greater than max\_sequence(), then there is no background sequence to be set.

```
13.67.7.51 m mutex
```

```
mutex seq64::sequence::m_mutex [mutable], [private]
```

Made mutable for use in certain locked getter functions.

```
13.67.7.52 m_note_off_margin
```

```
const midipulse seq64::sequence::m_note_off_margin [private]
```

Also used when the user attempts to shrink a note to zero (or less than zero) length.

# 13.68 seq64::trigger Class Reference

This class hold a single trigger for a sequence object.

## **Public Member Functions**

• trigger ()

Initializes the trigger structure.

bool operator< (const trigger &rhs)</li>

This operator compares only the m\_tick\_start members.

• midipulse length () const

'Getter' function for member m\_tick\_end and m\_tick\_start.

• midipulse tick\_start () const

'Getter' function for member m\_tick\_start

void tick\_start (midipulse s)

'Setter' function for member m tick start

void increment\_tick\_start (midipulse s)

'Setter' function for member m\_tick\_start

void decrement\_tick\_start (midipulse s)

'Setter' function for member m\_tick\_start

• midipulse tick\_end () const

'Getter' function for member m\_tick\_end

• void tick\_end (midipulse e)

'Setter' function for member m\_tick\_end

void increment\_tick\_end (midipulse s)

'Setter' function for member m\_tick\_end

· void decrement tick end (midipulse s)

'Setter' function for member m\_tick\_end

midipulse offset () const

'Getter' function for member m\_offset

• void offset (midipulse o)

'Setter' function for member m\_offset

• void increment\_offset (midipulse s)

'Setter' function for member m\_offset

• void decrement\_offset (midipulse s)

'Setter' function for member m\_offset

• bool selected () const

'Getter' function for member m\_selected

void selected (bool s)

'Setter' function for member m\_selected

### **Private Attributes**

• midipulse m\_tick\_start

Provides the starting tick for this trigger.

• midipulse m\_tick\_end

Provides the ending tick for this trigger.

· midipulse m\_offset

Provides the offset for this trigger.

• bool m selected

Indicates that the trigger is part of a selection.

## 13.68.1 Detailed Description

This class is used in playback, and is contained in the triggers class.

## 13.68.2 Constructor & Destructor Documentation

```
13.68.2.1 trigger()
```

```
seq64::trigger::trigger ( ) [inline]
```

# 13.68.3 Member Function Documentation

```
13.68.3.1 operator<()
```

## **Parameters**

*rhs* The "right-hand side" of the less-than operation.

#### Returns

Returns true if m\_tick\_start is less than rhs's.

```
13.68.3.2 length()
midipulse seq64::trigger::length ( ) const [inline]
```

We've seen that some of the calculations of trigger length are wrong, being 1 tick less than the true length of the trigger in pulses. This function calculates trigger length the correct way.

```
13.68.3.3 tick_start() [1/2]
midipulse seq64::trigger::tick_start ( ) const [inline]
13.68.3.4 tick_start() [2/2]
void seq64::trigger::tick_start (
             midipulse s ) [inline]
13.68.3.5 increment_tick_start()
void seq64::trigger::increment_tick_start (
             midipulse s ) [inline]
13.68.3.6 decrement_tick_start()
void seq64::trigger::decrement_tick_start (
             midipulse s ) [inline]
13.68.3.7 tick_end() [1/2]
midipulse seq64::trigger::tick_end ( ) const [inline]
13.68.3.8 tick_end() [2/2]
void seq64::trigger::tick_end (
             midipulse e ) [inline]
13.68.3.9 increment_tick_end()
void seq64::trigger::increment_tick_end (
             midipulse s ) [inline]
```

```
13.68.3.10 decrement_tick_end()
void seq64::trigger::decrement_tick_end (
             midipulse s ) [inline]

13.68.4.4 m_selected
bool seq64::trigger::m_selected [private]
```

# 13.69 seq64::triggers Class Reference

The triggers class is a receptable the triggers that can be used with a sequence object.

#### **Public Member Functions**

• triggers (sequence &parent)

Principal constructor.

• ∼triggers ()

A rote destructor.

• triggers & operator= (const triggers &rhs)

Principal assignment operator.

void set\_ppqn (int ppqn)

'Setter' function for member m\_ppqn We have to set this value after construction for best safety.

• void set\_length (int len)

'Setter' function for member m\_length We have to set this value after construction for best safety.

const List & triggerlist () const

'Getter' function for member m\_triggers This is the const version

· List & triggerlist ()

'Getter' function for member m\_triggers

void push\_undo ()

Pushes the list-trigger into the trigger undo-list, then flags each item in the undo-list as unselected.

• void pop\_undo ()

If the trigger undo-list has any items, the list-trigger is pushed into the redo list, the top of the undo-list is coped into the list-trigger, and then pops from the undo-list.

void pop\_redo ()

If the trigger redo-list has any items, the list-trigger is pushed into the undo list, the top of the redo-list is coped into the list-trigger, and then pops from the redo-list.

· void print (const std::string &seqname) const

Prints a list of the currently-held triggers.

bool play (midipulse &starttick, midipulse &endtick)

If playback-mode (song mode) is in force, that is, if using in-triggers and on/off triggers, this function handles that kind of playback.

• void add (midipulse tick, midipulse len, midipulse offset=0, bool adjustoffset=true)

Adds a trigger.

void adjust\_offsets\_to\_length (midipulse newlen)

Adjusts trigger offsets to the length specified for all triggers, and undo triggers.

· void split (midipulse tick)

Splits the first trigger that brackets the splittick parameter.

void grow (midipulse tickfrom, midipulse tickto, midipulse length)

Grows a trigger.

· void remove (midipulse tick)

Deletes the first trigger that brackets the given tick from the trigger-list.

bool get state (midipulse tick)

Checks the list of triggers against the given tick.

bool select (midipulse tick)

Checks the list of triggers against the given tick.

bool unselect ()

Unselects all triggers.

bool intersect (midipulse position, midipulse &start, midipulse &end)

This function examines each trigger in the trigger list.

void remove\_selected ()

Deletes the first selected trigger that is found.

void copy\_selected ()

Copies the first selected trigger that is found.

void paste (midipulse paste tick=SEQ64 NO PASTE TRIGGER)

If there is a copied trigger, then this function grabs it from the trigger clipboard and adds it.

bool move\_selected (midipulse tick, bool adjustoffset, grow\_edit\_t which=GROW\_MOVE)

Moves selected triggers as per the given parameters.

• midipulse get\_selected\_start ()

Gets the selected trigger's start tick.

• midipulse get\_selected\_end ()

Gets the selected trigger's end tick.

midipulse get\_maximum ()

Get the ending value of the last trigger in the trigger-list.

· void move (midipulse starttick, midipulse distance, bool direction)

Moves triggers in the trigger-list.

· void copy (midipulse starttick, midipulse distance)

Not sure what these diagrams are for yet.

• void clear ()

Clears the whole list of triggers.

• bool next (midipulse \*tick\_on, midipulse \*tick\_off, bool \*selected, midipulse \*tick\_offset)

Get the next trigger in the trigger list, and set the parameters based on that trigger.

trigger next\_trigger ()

Get the next trigger in the trigger list.

void reset\_draw\_trigger\_marker ()

Sets the draw-trigger iterator to the beginning of the trigger list.

- · void set trigger paste tick (midipulse tick)
- · midipulse get\_trigger\_paste\_tick () const

## **Private Types**

```
    enum grow_edit_t {
        GROW_START,
        GROW_END,
        GROW MOVE }
```

Provides a typedef introduced by Stazed to make the trigger grow/move code easier to understand.

typedef std::list< trigger > List

Exposes the triggers type, currently needed for midi container only.

typedef std::stack< List > Stack

Provides a stack for use with the undo/redo features of the trigger support.

### **Private Member Functions**

· midipulse adjust\_offset (midipulse offset)

Adjusts the given offset by mod'ing it with m\_length and adding m\_length if needed, and returning the result.

void split (trigger &trig, midipulse splittick)

Splits the trigger given by the parameter into two triggers.

#### **Private Attributes**

· sequence & m\_parent

Holds a reference to the parent sequence object that owns this trigger object.

· List m\_triggers

This list holds the current pattern/triggers events.

· trigger m clipboard

This item holds a single copied trigger, to be pasted later.

· Stack m undo stack

Handles the undo list for a series of operations on triggers.

Stack m\_redo\_stack

Handles the redo list for a series of operations on triggers.

· List::iterator m iterator play trigger

An iterator for cycling through the triggers during playback.

• List::iterator m\_iterator\_draw\_trigger

An iterator for cycling through the triggers during drawing.

• bool m\_trigger\_copied

Set to true if there is an active trigger in the trigger clipboard.

midipulse m\_paste\_tick

The tick point for pasting.

int m\_ppqn

Holds the value of the PPQN from the parent sequence, for easy access.

• int m\_length

Holds the value of the length from the parent sequence, for easy access.

## **Friends**

- class FruityPerfInput

## 13.69.1 Member Typedef Documentation

13.69.1.1 List

typedef std::list<trigger> seq64::triggers::List [private]

```
13.69.1.2 Stack
typedef std::stack<List> seq64::triggers::Stack [private]

13.69.2 Member Enumeration Documentation

13.69.2.1 grow_edit_t
```

enum seq64::triggers::grow\_edit\_t [private]

#### Enumerator

GROW_START	Grow the start of the trigger.
GROW_END	Grow the end of the trigger.
GROW_MOVE	Move the entire trigger block.

# 13.69.3 Constructor & Destructor Documentation

### 13.69.3.1 triggers()

#### **Parameters**

parent The triggers object often needs to tell its parent sequence object what to do (such as stop playing).

## 13.69.3.2 ∼triggers()

```
seq64::triggers::~triggers ( )
```

## 13.69.4 Member Function Documentation

## 13.69.4.1 operator=()

Follows the stock rules for such an operator, but does a little more then just assign member values.

FIXED, BEWARE: Currently, it does not assign them all, so we should create a partial\_copy() function to do this work, and use it where it is needed.

## **Parameters**

```
rhs Provides the "right-hand side" of the assignment operation.
```

### Returns

Returns a reference to self, for use in concatenated assignment operations.

## 13.69.4.2 set\_ppqn()

```
13.69.4.3 set_length()
```

Also, there a chance that the length of the parent might change from time to time. Currently, only the sequence constructor and midifile call this function.

```
13.69.4.4 triggerlist() [1/2]
const List& seq64::triggers::triggerlist ( ) const [inline]
13.69.4.5 triggerlist() [2/2]
List& seq64::triggers::triggerlist ( ) [inline]
13.69.4.6 push_undo()
void seq64::triggers::push_undo ( )
13.69.4.7 pop_undo()
void seq64::triggers::pop_undo ( )
13.69.4.8 pop_redo()
void seq64::triggers::pop_redo ( )
13.69.4.9 print()
void seq64::triggers::print (
             const std::string & seqname ) const
Parameters
 segname
            A tag name to accompany the print-out, for the human to read.
```

## 13.69.4.10 play()

This is a new function for sequence::play() to call.

The for-loop goes through all the triggers, determining if there is are trigger start/end values before the *end\_tick*. If so, then the trigger state is set to true (start only within the tick range) or false (end is within the tick range), and the trigger tick is set to start or end. The first start or end trigger that is past the end tick cause the search to end.

If the trigger state has changed, then the start/end ticks are passed back to the sequence, and the trigger offset is adjusted.

#### **Parameters**

start_tick Provid		Provides the starting tick value, and returns the modified value as a side-effect.
	end_tick	Provides the ending tick value, and returns the modified value as a side-effect.

#### Returns

Returns true if we're through playing the frame (trigger turning off), and the caller should stop the playback.

#### 13.69.4.11 add()

## What is this?

## **Parameters**

tick	Provides the tick (pulse) time at which the trigger goes on.
len	Provides the length of the trigger. This value is actually calculated from the "on" value minus the "off" value read from the MIDI file.
offset	This value specifies the offset of the trigger. It is a feature of the c_triggers_new that c_triggers doesn't have. It is the third value in the trigger specification of the Sequencer64 MIDI file.
fixoffset	If true, the offset parameter is modified by <a href="mailto:adjust_offset">adjust_offset()</a> first. We think that basically makes sure it is positive.

### 13.69.4.12 adjust\_offsets\_to\_length()

#### **Parameters**

newlength	Provides the length to which to adjust the offsets.
-----------	---

### **COMMON CODE?**

This is the first trigger where splittick is greater than L and less than R.

#### **Parameters**

	splittick	Provides the tick that must be bracketed for the split to be made.	]
--	-----------	--	---

## 13.69.4.14 grow()

This function looks for the first trigger where the tickfrom parameter is between the trigger's tick-start and tick-end values. If found then the trigger's start is moved back to tickto, if necessary, or the trigger's end is moved to tickto plus the length parameter, if necessary.

Then this new trigger is added, and the function breaks from the search loop.

#### **Parameters**

tickfrom	The desired from-value back which to expand the trigger, if necessary.
tickto	The desired to-value towards which to expand the trigger, if necessary.
len	The additional length to append to tickto for the check.

### 13.69.4.15 remove()

#### **Parameters**

*tick* Provides the tick to be examined.

### 13.69.4.16 get\_state()

If any trigger is found to bracket that tick, then true is returned.

#### **Parameters**

*tick* Provides the tick of interest.

## Returns

Returns true if a trigger is found that brackets the given tick.

### 13.69.4.17 select()

If any trigger is found to bracket that tick, then true is returned, and the trigger is marked as selected.

### **Parameters**

*tick* Provides the tick of interest.

## Returns

Returns true if a trigger is found that brackets the given tick.

# 13.69.4.18 unselect()

```
bool seq64::triggers::unselect ( )
```

## Returns

Always returns false.

## 13.69.4.19 intersect()

If the given position is between the current trigger's tick-start and tick-end values, the these values are copied to the start and end parameters, respectively, and then we exit.

position	The position to examine.	
start	The destination for the starting tick (m_tick_start) of the matching trigger.	
ender	The destination for the ending tick (m_tick_end) of the matching trigger.	

#### Returns

Returns true if a trigger was found whose start/end ticks contained the position. Otherwise, false is returned, and the start and end return parameters should not be used.

# 

It pastes at the copy end. or at the paste-tick, if supplied.

# **Parameters**

paste_tick	Provides the optional tick at which to paste the trigger. If not set to
	SEQ64_NO_PASTE_TRIGGER, this value is used to adjust the paste offset.

# 13.69.4.23 move\_selected()

tick	The tick at which the trigger starts.	
fixoffset	Set to true if the offset is to be adjusted.	
which	Selects which movement will be done, as discussed above. See the values of the trigger::grow_edit_t type.	

#### Returns

Returns true if there was room to move. Otherwise, false is returned. We need this feature to support keystoke movement of a selected trigger in the perfroll window, and keep it from continually incrementing when there can be no more movement. This causes moving the other direction to be delayed while the accumulating movement counter is used up. However, right now we can't rely on this result, and ignore it. There may be no way around this minor issue.

```
13.69.4.24 get_selected_start()
midipulse seq64::triggers::get_selected_start ( )
```

We guess this ends up selecting only one trigger, otherwise only the last selected one would effectively set the result.

#### Returns

Returns the tick\_start() value of the last-selected trigger. If no triggers are selected, then midipulse(-1) is returned.

```
13.69.4.25 get_selected_end()
midipulse seq64::triggers::get_selected_end ( )
```

#### Returns

Returns the tick\_end() value of the last-selected trigger. If no triggers are selected, then midipulse(-1) is returned.

```
13.69.4.26 get_maximum()
midipulse seq64::triggers::get_maximum ( )
```

# Returns

Returns the tick-end for the last trigger, if available. Otherwise, 0 is returned.

# 13.69.4.27 move() void seq64::triggers::move ( midipulse starttick, midipulse distance, bool direction )

There's no way to optimize this by saving tick values, as they are potentially modified at each step.

	starttick	The current location of the triggers.
distance The distance away from the current location to which to move the trigge direction If true, the triggers are moved forward. If false, the triggers are moved by		The distance away from the current location to which to move the triggers.
		If true, the triggers are moved forward. If false, the triggers are moved backward.

# 13.69.4.28 copy() void seq64::triggers::copy ( midipulse starttick, midipulse distance ) ... a [ ][ ] . . . ... a . . . 7 play 5 3 offset 10 play L [ ] [ ] [] orig Γ [ ] [ ][] split on the R marker, shift first [ ] delete middle [ ][] [] move ticks L R ][ ] [] split on L ] [ ] [] increase all after L ] 0123456789abcdef0123456789abcdef ][ ][ ][ ][ ][ ] [ ][ ] 6 2 2 6 inverse offset [ ][ ][][][][][][ 4 0 7 4 2 0 4 0 1 4 6 0 ][ ][ ] ] [ ] ][ ][][][][][][ c 4 0 f c a 8 4 c 0 1 4 6 8 e a 2 6 inverse offset ][][][][][][][] ] [ ][ ] gfca8 ghkmn inverse offset 0123456789abcdefghijklmonpq

Copies triggers to a point distant from a given tick.

ponmlkjihqfedcba9876543210

starttick The current location of the triggers.		The current location of the triggers.
	distance	The distance away from the current location to which to copy the triggers.

Todo It would be a bit simpler to simply return a trigger object, wouldn't it?

#### **Parameters**

tick_on	Return value for the retrieval of the starting tick for the trigger	
tick_off	Return value for the retrieval of the ending tick for the trigger.	
selected	Return value for the retrieval of the is-selected flag for the trigger.	
offset	Return value for the retrieval of the offset for the trigger.	

# Returns

Returns true if a trigger was found. If false, the caller cannot rely on the values returned through the return parameters.

**Side-effect(s)** The value of the m\_iterator\_draw\_trigger member will be altered by this call, unless pointing to the end of the triggerlist, or if there are no triggers.

```
13.69.4.31 next_trigger()

trigger seq64::triggers::next_trigger ( )
```

# Returns

Returns the next trigger. If there is none, a default trigger object is returned.

```
13.69.4.32 reset_draw_trigger_marker()
void seq64::triggers::reset_draw_trigger_marker ( ) [inline]
```

offset Provides the offset, mod'ed against m\_length, used to adjust the offset.

#### Returns

Returns the new offset. However, if m length is 0, no change is made, and the original offset is returned.

The original trigger ends 1 tick before the splittick parameter, and the new trigger starts at splittick and ends where the original trigger ended.

# Parameters

trig	Provides the original trigger, and also holds the changes made to that trigger as it is shortened, as a side-effect.
splittick	The position just after where the original trigger will be truncated, and the new trigger begins.

# 13.69.5 Friends And Related Function Documentation

```

bool seq64::triggers::m_trigger_copied [private]

13.69.6.9 m_paste_tick
midipulse seq64::triggers::m_paste_tick [private]
```

Set to -1 if not in force. This is a new feature from stazed's Seq32 project.

```
13.69.6.10 m_ppqn
int seq64::triggers::m_ppqn [private]
```

This should not change, but we have to set it after construction, and so we provide a setter for it, set\_ppqn(), called by the sequence constructor.

```
13.69.6.11 m_length
int seq64::triggers::m_length [private]
```

This might change, we're not yet sure.

# 13.70 seq64::user\_instrument Class Reference

Provides data about the MIDI instruments, readable from the "user" configuration file.

#### **Public Member Functions**

user\_instrument (const std::string &name="")

Default constructor.

• user\_instrument (const user\_instrument &rhs)

Copy constructor.

user instrument & operator= (const user instrument &rhs)

Principal assignment operator.

• bool is\_valid () const

'Getter' function for member m\_is\_valid

• void set\_defaults ()

Sets the default values.

• const std::string & name () const

'Getter' function for member m\_instrument\_def.instrument (name of instrument)

• int controller count () const

'Getter' function for member m\_controller\_count This function returns the number of active controllers.

• int controller max () const

'Getter' function for member MIDI\_CONTROLLER\_MAX This function returns the maximum number of controllers, active or inactive.

const std::string & controller\_name (int c) const

'Getter' function for member m\_instrument\_def.controllers[c]

bool controller\_active (int c) const

'Getter' function for member m\_instrument\_def.controllers\_active[c]

void set\_controller (int c, const std::string &cname, bool isactive)

'Setter' function for member m\_instrument\_def.controllers[c] and .controllers\_active[c] Only sets the controller values if the object is already valid.

#### **Private Member Functions**

• void set\_name (const std::string &instname)

'Setter' function for member m\_instrument\_def.instrument If the name parameter is not empty, the validity flag is set to true, otherwise it is set to false.

void copy\_definitions (const user\_instrument &rhs)

Copies the array members from one instance of user\_instrument to this one.

#### **Private Attributes**

• bool m\_is\_valid

Provides a validity flag, useful in returning a reference to a bogus object for internal error-check.

• int m\_controller\_count

Provides the actual number of non-default controllers actually set.

· user\_instrument\_t m\_instrument\_def

The instance of the structure that this class wraps.

# 13.70.1 Detailed Description

Will later make the size adjustable, if it makes sense to do so.

# 13.70.2 Constructor & Destructor Documentation

Fills in the defaults for the instrument definition, sets its name, and provides some light validation.

#### **Parameters**

name The name of the instrument, valid only if it is not empty.

#### **Parameters**

*rhs* The sources of the data for the copy.

# 13.70.3 Member Function Documentation

```
13.70.3.1 operator=()
```

```
rhs The sources of the data for the assignment.
```

#### Returns

Returns a reference to this object.

```
13.70.3.2 is_valid()
bool seq64::user_instrument::is_valid ( ) const [inline]

13.70.3.3 set_defaults()

void seq64::user_instrument::set_defaults ( )

Also invalidates the object.

13.70.3.4 name()

const std::string& seq64::user_instrument::name ( ) const [inline]

13.70.3.5 controller_count()

int seq64::user_instrument::controller_count ( ) const [inline]

13.70.3.6 controller_max()

int seq64::user_instrument::controller_max ( ) const [inline]
```

Remember that the controller numbers for each MIDI instrument range from 0 to 127 (MIDI\_CONTROLLER\_MAX-1).

```
13.70.3.7 controller_name()
```

```
const std::string & seq64::user_instrument::controller_name (  \qquad \qquad \text{int } c \text{ ) const}
```

c The index of the desired controller.

# Returns

The name of the desired controller has is returned. If the index c is out of range, or the object is not valid, then a reference to an internal, empty string is returned.

#### 13.70.3.8 controller\_active()

```
bool seq64::user_instrument::controller_active (  \quad \text{int } c \text{ ) const}
```

#### **Parameters**

c The index of the desired controller.

#### Returns

The status of the desired controller has is returned. If the index c is out of range, or the object is not valid, then false is returned.

# 13.70.3.9 set\_controller()

# Parameters

С	The index of the desired controller.	
cname	The name of the controller to be set as the controller name.	
isactive	A flag that indicates if the desired controller is active.	

# 13.70.3.10 set\_name()

# Too tricky?

# **Parameters**

instname The name of the instrument, valid only if it is not e	ty.
--	-----

#### 13.70.3.11 copy\_definitions()

Does not include the validity flag.

#### **Parameters**

rhs The sources of the data for the partial copy.

#### 13.70.4 Field Documentation

```
13.70.4.1 m_is_valid
```

```
bool seq64::user_instrument::m_is_valid [private]
```

Callers should check this flag via the is\_valid() accessor before using this object. This flag is set to true when any valid member assignment occurs via a public setter call. However, setting an empty name for the instrument member will render the object invalid.

```
13.70.4.2 m_controller_count
```

```
int seq64::user_instrument::m_controller_count [private]
```

Often, the "user" configuration file has only a few out of the 128 assigned explicitly.

```
13.70.4.3 m_instrument_def
```

```
user_instrument_t seq64::user_instrument::m_instrument_def [private]
```

# 13.71 seq64::user\_instrument\_t Struct Reference

This structure corresponds to [user-instrument-N] definitions in the  $\sim$ /.seq24usr or  $\sim$ /.config/sequencer64/susr file.

#### **Data Fields**

· std::string instrument

Provides the name of the "instrument" being supported.

• std::string controllers [SEQ64\_MIDI\_CONTROLLER\_MAX]

Provides a list of up to 128 controllers (e.g.

bool controllers\_active [SEQ64\_MIDI\_CONTROLLER\_MAX]

Provides a flag that indicates if each of up to 128 controller is active and supported.

#### 13.71.1 Field Documentation

#### 13.71.1.1 instrument

```
std::string seq64::user_instrument_t::instrument
```

Do not confuse "instrument" with "program" here. An "instrument" is most likely a hardware MIDI sound-box (though it could be a software synthesizer as well.

#### 13.71.1.2 controllers

```
std::string seq64::user_instrument_t::controllers[SEQ64_MIDI_CONTROLLER_MAX]
```

"Modulation"). If a controller isn't present, or if General MIDI is in force, this name might be empty.

#### 13.71.1.3 controllers active

```
bool seq64::user_instrument_t::controllers_active[SEQ64_MIDI_CONTROLLER_MAX]
```

If false, it might be an unsupported controller or a General MIDI device.

# 13.72 seq64::user\_midi\_bus Class Reference

Provides data about the MIDI busses, readable from the "user" configuration file.

#### **Public Member Functions**

• user midi bus (const std::string &name="")

Default constructor.

user\_midi\_bus (const user\_midi\_bus &rhs)

Copy constructor.

• user\_midi\_bus & operator= (const user\_midi\_bus &rhs)

Principal assignment operator.

• bool is\_valid () const

'Getter' function for member m\_is\_valid

void set defaults ()

Sets the default values.

• const std::string & name () const

'Getter' function for member m\_midi\_bus\_def.alias (name of alias)

int channel\_count () const

 ${\it 'Getter' function for member m\_channel\_count}$ 

• int channel\_max () const

'Getter' function for member SEQ64\_MIDI\_BUS\_CHANNEL\_MAX

• int instrument (int channel) const

'Getter' function for member m\_midi\_bus\_def.instrument[channel]

• void set\_instrument (int channel, int instrum)

'Getter' function for member m\_midi\_bus\_def.instrument[channel]

#### **Private Member Functions**

• void set\_name (const std::string &name)

'Setter' function for member m\_midi\_bus\_def.alias (name of alias) Also sets the validity flag according to the emptiness of the name parameter.

• void copy\_definitions (const user\_midi\_bus &rhs)

Copies the member fields from one instance of user\_midi\_bus to this one.

#### **Private Attributes**

• bool m\_is\_valid

Provides a validity flag, useful in returning a reference to a bogus object for internal error-check.

• int m\_channel\_count

Provides the actual number of non-default buss channels actually set.

• user\_midi\_bus\_t m\_midi\_bus\_def

The instance of the structure that this class wraps.

# 13.72.1 Detailed Description

Will later make the size adjustable, if it makes sense to do so.

# 13.72.2 Constructor & Destructor Documentation

#### **Parameters**

name The name of the buss, valid only if it is not empty.

#### **Parameters**

*rhs* The sources of the data for the copy.

# 13.72.3 Member Function Documentation

#### 13.72.3.1 operator=()

#### **Parameters**

*rhs* The sources of the data for the assignment.

#### Returns

Returns a reference to this object.

```
13.72.3.2 is_valid()
```

```
bool seq64::user_midi_bus::is_valid ( ) const [inline]
```

#### 13.72.3.3 set\_defaults()

```
void seq64::user_midi_bus::set_defaults ( )
```

Also invalidates the object. All 16 of the channels are set to SEQ64\_GM\_INSTRUMENT\_FLAG (-1).

#### 13.72.3.4 name()

```
const std::string& seq64::user_midi_bus::name ( ) const [inline]
```

#### 13.72.3.5 channel\_count()

```
int seq64::user_midi_bus::channel_count ( ) const [inline]
```

# Returns

This function returns the number of channels. Basically this value is always the same as that returned by channel max(), but this pair of functions is consistent with the count functions in the user instrument class.

# 13.72.3.6 channel\_max()

```
int seq64::user_midi_bus::channel_max ( ) const [inline]
```

#### Returns

Returns the maximum number of MIDI buss channels. Remember that the instrument channels for each MIDI buss range from 0 to 15 (MIDI\_BUS\_CHANNEL\_MAX-1).

#### 13.72.3.7 instrument()

channel Provides the desired buss channel number	er.
--	-----

#### Returns

The instrument number of the desired buss channel is returned. If the channel number is out of range, or the object is not valid, then SEQ64\_GM\_INSTRUMENT\_FLAG (-1) is returned.

#### 13.72.3.8 set\_instrument()

Does not alter the validity flag, just checks it.

#### **Parameters**

channel	Provides the desired buss channel number.
instrum	Provides the instrument number to set that channel to.

#### 13.72.3.9 set\_name()

#### 13.72.3.10 copy\_definitions()

Does not include the validity flag.

#### 13.72.4 Field Documentation

# 13.72.4.1 m\_is\_valid

```
bool seq64::user_midi_bus::m_is_valid [private]
```

Callers should check this flag via the is\_valid() accessor before using this object. This flag is set to true when any valid member assignment occurs via a public setter call.

# 13.72.4.2 m\_channel\_count

```
int seq64::user_midi_bus::m_channel_count [private]
```

Often, the "user" configuration file has only a few out of the 16 assigned explicitly.

#### 13.72.4.3 m\_midi\_bus\_def

```
user_midi_bus_t seq64::user_midi_bus::m_midi_bus_def [private]
```

# 13.73 seq64::user\_midi\_bus\_t Struct Reference

This structure corresponds to [user-midi-bus-0] definitions in the  $\sim$ /.seq24usr ("user") file ( $\sim$ /.config/sequencer64/sequencer64.usr in the latest version of the application).

#### **Data Fields**

· std::string alias

Provides the user's desired name for the MIDI bus.

int instrument [SEQ64\_MIDI\_BUS\_CHANNEL\_MAX]

Provides an implicit list of MIDI channels from 0 to 15 (1 to 16) and the "instrument" number assigned to each channel.

# 13.73.1 Field Documentation

#### 13.73.1.1 alias

```
std::string seq64::user_midi_bus_t::alias
```

For example, "2x2 A" for some kind of MIDI card or USB MIDI cable. If manual-alsa-ports is enabled, this could be something like "[0] seq24 0", and that is what should be shown in that case.

#### 13.73.1.2 instrument

```
int seq64::user_midi_bus_t::instrument[SEQ64_MIDI_BUS_CHANNEL_MAX]
```

Note that the "instrument" is not a MIDI program number. Instead, it is the number associated with a "user-instrument" section in the "user" configuration file.

# 13.74 seq64::user\_settings Class Reference

Holds the current values of sequence settings and settings that can modify the number of sequences and the configuration of the user-interface.

#### **Public Member Functions**

user\_settings ()

Default constructor.

· user settings (const user settings &rhs)

Copy constructor.

• user\_settings & operator= (const user\_settings &rhs)

Principal assignment operator.

void set defaults ()

Sets the default values.

• void normalize ()

Calculate the derived values from the already-set values.

bool add\_bus (const std::string &alias)

Adds a user buss to the container, but only does so if the name parameter is not empty.

bool add instrument (const std::string &instname)

Adds a user instrument to the container, but only does so if the name parameter is not empty.

· const user midi bus & bus (int index)

'Getter' function for member Unlike the non-const version this function is public.

const user\_instrument & instrument (int index)

'Getter' function for member Unlike the non-const version this function is public.

int bus\_count () const

'Getter' function for member m\_midi\_buses.size()

• void set\_bus\_instrument (int index, int channel, int instrum)

'Getter' function for member m\_midi\_buses[index].instrument[channel] Currently this function is used, in the userfile ::parse() function.

• int bus\_instrument (int buss, int channel)

'Getter' function for member m\_midi\_buses[buss].instrument[channel]

• const std::string & bus\_name (int buss)

'Getter' function for member m\_midi\_buses[buss].name

· int instrument count () const

 ${\it 'Getter' function for member m\_instruments.size()}$ 

· void set instrument controllers (int index, int cc, const std::string &ccname, bool isactive)

'Setter' function for member m\_midi\_instrument\_defs[index].controllers, controllers\_active

const std::string & instrument\_name (int instrum)

'Getter' function for member m\_instruments[instrument].instrument (name of instrument)

• const std::string & instrument\_name (int buss, int channel)

Gets the correct instrument number from the buss and channel, and then looks up the name of the instrument.

bool instrument\_controller\_active (int instrum, int cc)

'Getter' function for member m\_instruments[instrument].controllers\_active[controller]

bool controller\_active (int buss, int channel, int cc)

A convenience function so that the caller doesn't have to get the instrument number from the bus\_instrument() member function.

const std::string & instrument\_controller\_name (int instrum, int cc)

'Getter' function for member m\_instruments[instrument].controllers\_active[controller]

• const std::string & controller name (int buss, int channel, int cc)

'Getter' function for member m\_instruments[instrument].controllers\_active[controller] A convenience function so that the caller doesn't have to get the instrument number from the bus\_instrument() member function.

int grid\_style () const

'Getter' function for member m\_grid\_style Checks for normal style.

• bool grid\_is\_normal () const

'Getter' function for member m\_grid\_style Checks for normal style.

· bool grid is white () const

'Getter' function for member m\_grid\_style Checks for the white style.

bool grid\_is\_black () const

'Getter' function for member m\_grid\_style Checks for the black style.

• int grid brackets () const

'Getter' function for member m\_grid\_brackets

• int mainwnd\_rows () const

'Getter' function for member m\_mainwnd\_rows

• int mainwnd\_cols () const

'Getter' function for member m\_mainwnd\_cols

• int seqs\_in\_set () const

'Getter' function for member m\_seqs\_in\_set, dependent member

int gmute\_tracks () const

'Getter' function for member m\_gmute\_tracks, dependent member

int max\_sets () const

'Getter' function for member m max sets

• int max\_sequence () const

'Getter' function for member m\_max\_sequence, dependent member

int text\_x () const

'Getter' function for member m\_text\_x, not user modifiable, not saved

int text\_y () const

'Getter' function for member m\_text\_y, not user modifiable, not saved

• int seqchars x () const

'Getter' function for member m\_seqchars\_x, not user modifiable, not saved

int seqchars\_y () const

'Getter' function for member m\_seqchars\_y, not user modifiable, not saved

• int seqarea\_x () const

'Getter' function for member m\_seqarea\_x, not user modifiable, not saved

int seqarea\_y () const

'Getter' function for member m\_seqarea\_y, not user modifiable, not saved

• int seqarea\_seq\_x () const

'Getter' function for member  $m\_seqarea\_seq\_x$ , not user modifiable, not saved

• int seqarea\_seq\_y () const

'Getter' function for member m\_seqarea\_seq\_y, not user modifiable, not saved

int mainwid\_border () const

'Getter' function for member m\_mainwid\_border

• int mainwid\_spacing () const

'Getter' function for member m\_mainwid\_spacing

int mainwid\_x () const

'Getter' function for member m\_mainwid\_x, dependent member

int mainwid\_y () const

'Getter' function for member m\_mainwid\_y, dependent member

• int control\_height () const

'Getter' function for member m\_control\_height

· int zoom () const

'Getter' function for member m\_current\_zoom

• void zoom (int value)

'Setter' function for member m\_current\_zoom This value is not modified unless the value parameter is between 1 and 512, inclusive.

· bool global seq feature () const

'Getter' function for member m\_global\_seq\_feature\_save

• void global\_seq\_feature (bool flag)

'Setter' function for member m\_global\_seq\_feature\_save

int seqedit\_scale () const

'Getter' function for member m segedit scale

· void segedit scale (int scale)

'Setter' function for member m\_seqedit\_scale

• int seqedit\_key () const

'Getter' function for member m\_seqedit\_key

void seqedit\_key (int key)

'Setter' function for member m\_seqedit\_key

• int seqedit\_bgsequence () const

'Getter' function for member m\_seqedit\_bgsequence

void seqedit\_bgsequence (int seqnum)

'Setter' function for member m\_seqedit\_bgsequence Note that SEQ64\_IS\_LEGAL\_SEQUENCE() allows the SE← Q64\_SEQUENCE\_LIMIT (0x800 = 2048) value, to turn off the use of a background sequence.

bool use\_new\_font () const

'Getter' function for member m\_use\_new\_font

bool allow\_two\_perfedits () const

'Getter' function for member m\_allow\_two\_perfedits

• int perf\_h\_page\_increment () const

'Getter' function for member m\_h\_perf\_page\_increment

int perf\_v\_page\_increment () const

'Getter' function for member m\_v\_perf\_page\_increment

• int progress\_bar\_colored () const

'Getter' function for member m\_progress\_bar\_colored

· bool progress\_bar\_thick () const

'Getter' function for member m\_progress\_bar\_thick

· bool inverse colors () const

Accessor m\_inverse\_colors

int window\_redraw\_rate () const

'Getter' function for member m window redraw rate ms

· bool use\_more\_icons () const

'Getter' function for member m\_use\_more\_icons

bool save\_user\_config () const

'Getter' function for member m\_save\_user\_config

void save\_user\_config (bool flag)

'Setter' function for member m\_save\_user\_config

• int midi\_ppqn () const

'Getter' function for member m\_midi\_ppqn

int midi\_beats\_per\_bar () const

'Getter' function for member m\_midi\_beats\_per\_measure

• int midi\_beats\_per\_minute () const

'Getter' function for member m\_midi\_beats\_per\_minute

int midi\_beat\_width () const

 ${\it 'Getter' function for member m\_midi\_beat\_width}$ 

· char midi buss override () const

'Getter' function for member m\_midi\_buss\_override

• int min\_zoom () const

'Getter' function for member mc\_min\_zoom

• int max zoom () const

'Getter' function for member mc\_max\_zoom

int baseline\_ppqn () const

'Getter' function for member mc\_baseline\_ppqn

· void use\_new\_font (bool flag)

'Setter' function for member m\_use\_new\_font

void allow two perfedits (bool flag)

Sets the value of allowing two perfedits to be created and shown to the user.

void perf h page increment (int inc)

Sets the horizontal page increment size for the horizontal scrollbar of a perfedit window.

void perf\_v\_page\_increment (int inc)

Sets the vertical page increment size for the vertical scrollbar of a perfedit window.

void progress\_bar\_colored (int palcode)

'Setter' function for member m\_progress\_bar\_colored

void progress\_bar\_thick (bool flag)

'Setter' function for member m\_progress\_bar\_thick

• void inverse\_colors (bool flag)

'Setter' function for member m inverse colors

void window\_redraw\_rate (int ms)

'Setter' function for member m\_window\_redraw\_rate\_ms

void use\_more\_icons (bool flag)

'Setter' function for member m use more icons

• void midi\_ppqn (int ppqn)

'Setter' function for member m\_midi\_ppqn This value can be set from 96 to 19200 (this upper limit will be determined by what Sequencer64 can actually handle).

void midi\_buss\_override (char buss)

'Setter' function for member m midi buss override This value can be set from 0 to 31.

#### **Protected Member Functions**

void grid brackets (int thickness)

'Getter' function for member m\_grid\_brackets

void grid\_style (int gridstyle)

 ${\it 'Setter' function for member m\_grid\_style}$ 

void mainwnd rows (int value)

'Setter' function for member m\_mainwnd\_rows This value is not modified unless the value parameter is between 4 and 8, inclusive.

void mainwnd\_cols (int value)

'Setter' function for member m\_mainwnd\_cols This value is not modified unless the value parameter is between 8 and 10, inclusive.

void max\_sets (int value)

'Setter' function for member m\_max\_sets This value is not modified unless the value parameter is between 32 and 64, inclusive.

void text\_x (int value)

'Setter' function for member m\_text\_x This value is not modified unless the value parameter is between 6 and 6, inclusive.

void text y (int value)

'Setter' function for member m\_text\_y This value is not modified unless the value parameter is between 12 and 12, inclusive.

void seqchars\_x (int value)

'Setter' function for member m\_seqchars\_x This affects the size or crampiness of a pattern slot, and for now we will hardwire it to 15.

void seqchars\_y (int value)

'Setter' function for member m\_seqchars\_y This affects the size or crampiness of a pattern slot, and for now we will hardwire it to 5.

void segarea\_x (int value)

'Setter' function for member m\_seqarea\_x

void seqarea\_y (int value)

'Setter' function for member m\_segarea\_y

void seqarea\_seq\_x (int value)

'Setter' function for member m\_segarea\_seq\_x

void seqarea\_seq\_y (int value)

'Setter' function for member m\_seqarea\_seq\_y

• void mainwid border (int value)

'Setter' function for member m\_mainwid\_border This value is not modified unless the value parameter is between 0 and 3, inclusive.

void mainwid spacing (int value)

'Setter' function for member m\_mainwid\_spacing This value is not modified unless the value parameter is between 2 and 6, inclusive.

· void control height (int value)

'Setter' function for member m\_control\_height This value is not modified unless the value parameter is between 0 and 4, inclusive.

• void dump summary ()

Provides a debug dump of basic information to help debug a surprisingly intractable problem with all busses having the name and values of the last buss in the configuration.

void midi beats per bar (int beatsperbar)

'Setter' function for member m\_midi\_beats\_per\_measure This value can be set from 1 to 16.

• void midi\_beats\_per\_minute (int beatsperminute)

 ${\it 'Setter' function for member m\_midi\_beats\_minute This value can be set from 20 to 500.}$ 

void midi\_beat\_width (int beatwidth)

'Setter' function for member m\_midi\_beatwidth This value can be set to any power of 2 in the range from 1 to 16.

# **Private Types**

```
    enum mainwid_grid_style_t {
        grid_style_normal,
        grid_style_white,
        grid_style_black,
        grid_style_max }
```

typedef std::vector< user\_midi\_bus > Busses

[user-midi-bus-definitions]

- typedef std::vector< user\_midi\_bus >::iterator BussIterator
- typedef std::vector< user\_midi\_bus >::const\_iterator BussConstIterator
- typedef std::vector< user\_instrument > Instruments

[user-instrument-definitions]

- typedef std::vector< user instrument >::iterator InstrumentIterator
- typedef std::vector< user\_instrument >::const\_iterator InstrumentConstIterator

#### **Private Member Functions**

user\_midi\_bus & private\_bus (int buss)

'Getter' function for member m\_midi\_buses[index] (internal function) If the index is out of range, then an invalid object is returned.

user\_instrument & private\_instrument (int instrum)

'Getter' function for member m\_instruments[index] If the index is out of range, then a invalid object is returned.

#### **Private Attributes**

• Busses m\_midi\_buses

Provides data about the MIDI busses, readable from the "user" configuration file.

· Instruments m instruments

Provides data about the MIDI instruments, readable from the "user" configuration file.

• mainwid\_grid\_style\_t m\_grid\_style

[user-interface-settings]

· int m grid brackets

Specify drawing brackets (like the old Seq24) or a solid box.

· int m mainwnd rows

Number of rows in the Patterns Panel.

· int m mainwnd cols

Number of columns in the Patterns Panel.

int m\_max\_sets

Maximum number of screen sets that can be supported.

· int m mainwid border

These control sizes.

- · int m\_mainwid\_spacing
- · int m control height

This constants seems to be created for a future purpose, perhaps to reserve space for a new bar on the mainwid pane.

int m\_current\_zoom

Provides the initial zoom value, in units of ticks per pixel.

• bool m\_global\_seq\_feature\_save

If true, this value provide a bit of backward-compatibility with the global key/scale/background-sequence persistence feature.

· int m\_seqedit\_scale

Replaces sequence is loaded into the sequence editor.

· int m segedit key

Replaces seqedit::m\_initial\_key as the repository for the key to apply when a sequence is loaded into the sequence editor.

• int m\_seqedit\_bgsequence

Replaces sequedit::m\_initial\_sequence as the repository for the background sequence to apply when a sequence is loaded into the sequence editor.

• bool m use new font

Sets the usage of the font.

bool m\_allow\_two\_perfedits

Enables the usage of two perfedit windows, for added convenience in editing multi-set songs.

• int m\_h\_perf\_page\_increment

Allows a changed to the page size for the horizontal scroll bar.

int m\_v\_perf\_page\_increment

Allows a changed to the page size for the vertical scroll bar.

· int m\_progress\_bar\_colored

If set, makes progress bars have the "progress\_color()", instead of black.

bool m\_progress\_bar\_thick

If set, makes progress bars thicker than 1 pixel...

· bool m inverse colors

If set, use an alternate, neo-inverse color palette.

• int m window redraw rate ms

Provides the global setting for redraw rate of windows.

• bool m\_use\_more\_icons

Another [user-interface-settings] item.

int m\_text\_x

Constants for the mainwid class.

- int m\_text\_y
- · int m seqchars x

Constants for the mainwid class.

- · int m\_seqchars\_y
- int m\_midi\_ppqn

Provides the universal PPQN setting for the duration of this setting.

• int m\_midi\_beats\_per\_measure

Provides the universal and unambiguous MIDI value for beats per measure, also called "beats per bar" (BPB).

int m midi beats per minute

Provides the universal and unambiguous MIDI value for beats per minute (BPM).

• int m\_midi\_beat\_width

Provides the universal MIDI value for beats width (BW).

· char m midi buss override

Provides a universal override of the buss number for all sequences, for the purpose of convenience of of testing.

- int m total segs
- · int m\_seqs\_in\_set

Number of patterns/sequences in the Patterns Panel, also known as a "set" or "screen set".

• int m\_gmute\_tracks

Number of group-mute tracks that can be supported, which is m\_seqs\_in\_set squared, or 1024.

int m\_max\_sequence

The maximum number of patterns supported is given by the number of patterns supported in the panel (32) times the maximum number of sets (32), or 1024 patterns.

int m\_seqarea\_x

The m\_seqarea\_x and m\_seqarea\_y constants are derived from the width and heights of the default character set, and the number of characters in width, and the number of lines, in a pattern/sequence box.

- int m segarea y
- int m\_seqarea\_seq\_x

Area of what? Doesn't look at all like it is based on the size of characters.

- int m\_seqarea\_seq\_y
- int m\_mainwid\_x

The width of the main pattern/sequence grid, in pixels.

- · int m mainwid y
- · bool m\_save\_user\_config

Provides a temporary variable that can be set from the command line to cause the "user" state to be saved into the "user" configuration file.

• const int mc\_min\_zoom

Provides the minimum zoom value, currently a constant.

• const int mc\_max\_zoom

Provides the maximum zoom value, currently a constant.

const int mc\_baseline\_ppqn

Permanent storage for the baseline, default PPQN used by Seq24.

#### **Friends**

· class userfile

# 13.74.1 Detailed Description

These settings will eventually be made part of the "user" settings file.

# 13.74.2 Member Typedef Documentation

#### 13.74.2.1 Busses

```
typedef std::vector<user_midi_bus> seq64::user_settings::Busses [private]
```

Internal type for the container of user\_midi\_bus objects. Sorry about the "confusion" about "bus" versus "buss". See Google for arguments about it.

#### 13.74.2.2 BussIterator

```
typedef std::vector<user_midi_bus>::iterator seq64::user_settings::BussIterator [private]
```

#### 13.74.2.3 BussConstIterator

typedef std::vector<user\_midi\_bus>::const\_iterator seq64::user\_settings::BussConstIterator
[private]

#### 13.74.2.4 Instruments

```
typedef std::vector<user_instrument> seq64::user_settings::Instruments [private]
```

Internal type for the container of user\_instrument objects.

#### 13.74.2.5 InstrumentIterator

```
typedef std::vector<user_instrument>::iterator seq64::user_settings::InstrumentIterator [private]
```

# 13.74.2.6 InstrumentConstiterator

```
\label{typedef} \begin{tabular}{ll} typedef std::vector < user_instrument > ::const_iterator seq 64::user_settings::Instrument Const \leftarrow Iterator [private] \end{tabular}
```

# 13.74.3 Member Enumeration Documentation

#### 13.74.3.1 mainwid\_grid\_style\_t

```
enum seq64::user_settings::mainwid_grid_style_t [private]
```

#### Enumerator

grid_style_normal	
The grid background color is white. This style better fits displaying the white-on-black	
sequence numbers. The box is drawn with brackets on either side.	
grid_style_black	The grid background color is black.
grid_style_max	Marks the end of the list, and is an illega

# 13.74.4 Constructor & Destructor Documentation

For the m\_midi\_buses and m\_instruments members, this function can only iterate over the current size of the vectors. But the default size is zero!

```
13.74.5.3 normalize()
```

```

             bool flag ) [inline]
```

```
13.74.5.92 perf_h_page_increment() [2/2]
void seq64::user_settings::perf_h_page_increment (
    int inc)
```

This value ranges from 1 (the original value, really too small for a "page" operation) to 6 (which is 24 measures, the same as the typical width of the perfroll)

This value ranges from 1 (the original value, really too small for a "page" operation) to 18 (which is 18 tracks, slightly more than the typical height of the perfroll)

```
13.74.5.94 progress_bar_colored() [2/2]
void seq64::user_settings::progress_bar_colored (
             int palcode ) [inline]
13.74.5.95 progress_bar_thick() [2/2]
void seq64::user_settings::progress_bar_thick (
             bool flag ) [inline]
13.74.5.96 inverse_colors() [2/2]
void seq64::user_settings::inverse_colors (
            bool flag ) [inline]
13.74.5.97 window_redraw_rate() [2/2]

            int ms ) [inline]
13.74.5.98 use_more_icons() [2/2]
void seq64::user_settings::use_more_icons (
             bool flag ) [inline]
13.74.5.99 midi_ppqn() [2/2]
void seq64::user_settings::midi_ppqn (
             int value )
```

The default value is 192.

The default value is -1, which means that there is no buss override. It provides a way to override the buss number for smallish MIDI files. It replaces the buss-number read from the file. This option is turned on by the —bus option, and is merely a convenience feature for the quick previewing of a tune. (It's called "developer laziness".)

This invalid object has an empty alias, and all the instrument numbers are -1.

This invalid object has an empty(), instrument name, false for all controllers\_active[] values, and empty controllers[] string values.

# 13.74.6 Friends And Related Function Documentation

#### 13.74.6.1 userfile

```
friend class userfile [friend]
```

#### 13.74.7 Field Documentation

## 13.74.7.1 m\_midi\_buses

```
Busses seq64::user_settings::m_midi_buses [private]
```

Since this object is a vector, its size is adjustable.

#### 13.74.7.2 m\_instruments

```
Instruments seq64::user_settings::m_instruments [private]
```

The size is adjustable, and grows as objects are added.

#### 13.74.7.3 m\_grid\_style

```
mainwid_grid_style_t seq64::user_settings::m_grid_style [private]
```

These are not labelled, but are present in the "user" configuration file in the following order:

```
-# grid-style
-# grid-brackets
-# mainwnd-rows
-# mainwnd-cols
-# max-set
-# mainwid-border
-# control-height
-# zoom
-# global-seq-feature
-# use-new-font
-# allow-two-perfedits
-# perf-h-page-increment
-# perf-v-page-increment
-# progress-bar-colored (new)
-# progress-bar-thick (new)
-# window-redraw-rate-ms (new)
```

Specifies the current grid style.

## 13.74.7.4 m\_grid\_brackets

```
int seq64::user_settings::m_grid_brackets [private]
```

0 = no brackets, 1 and above is the thickness of the brakets. 1 is the normal thickness of the brackets, 2 is a two-pixel thickness, and so on.

#### 13.74.7.5 m\_mainwnd\_rows

```
int seq64::user_settings::m_mainwnd_rows [private]
```

The current value is 4, and if changed, many other values depend on it. Together with m\_mainwnd\_cols, this value fixes the patterns grid into a 4 x 8 set of patterns known as a "screen set". We would like to be able to change this value from 4 to 8, and maybe allow the values of 5, 6, and 7 as well. But if we could just get 8 working, then well would Sequencer64 deserve the 64 in its name.

#### 13.74.7.6 m mainwnd cols

```
int seq64::user_settings::m_mainwnd_cols [private]
```

The current value is 4, and probably won't change, since other values depend on it. Together with m\_mainwnd\_rows, this value fixes the patterns grid into a 4 x 8 set of patterns known as a "screen set".

#### 13.74.7.7 m\_max\_sets

```
int seq64::user_settings::m_max_sets [private]
```

Basically, that the number of times the Patterns Panel can be filled. 32 sets can be created. Although this value is part of the "user" configuration file, it is likely that it will never change. Rather, the number of sequences per set would change. We'll see.

# 13.74.7.8 m\_mainwid\_border

```
int seq64::user_settings::m_mainwid_border [private]
```

We'll try changing them and see what happens. Increasing these value spreads out the pattern grids a little bit and makes the Patterns panel slightly bigger. Seems like it would be useful to make these values user-configurable.

#### 13.74.7.9 m\_mainwid\_spacing

```
int seq64::user_settings::m_mainwid_spacing [private]
```

## 13.74.7.10 m\_control\_height

```
int seq64::user_settings::m_control_height [private]
```

But it is used only in this header file, to define m\_mainwid\_y, but doesn't add anything to that value.

#### 13.74.7.11 m\_current\_zoom

```
int seq64::user_settings::m_current_zoom [private]
```

The original default value was 32 ticks per pixel, but larger PPQN values need higher values, and we will have to adapt the default zoom to the PPQN value. Also, the zoom can never be zero, as it can appear as the divisor in scaling equations.

#### 13.74.7.12 m\_global\_seq\_feature\_save

```
bool seq64::user_settings::m_global_seq_feature_save [private]
```

In this feature, applying one of these three changes to a sequence causes them to also be applied to sequences that are subsequently opened for editing. However, we improve on this feature by allowing the changes to be saved in the global, proprietary part of the saved MIDI file.

If false, the user can still save the key/scale/background-sequence values with each individual sequence, so they can be different.

This value will be true by default, unless changed in the "user" configuration file.

#### 13.74.7.13 m\_seqedit\_scale

```
int seq64::user_settings::m_seqedit_scale [private]
```

Its default value is c\_scale\_off. Although this value is now stored in the user\_settings class, it always comes from the currently loaded MIDI file, if present. If m\_global\_seq\_feature\_save is true, this variable is stored in the "proprietary" track at the end of the file, under the control tag c\_musicscale, and will be applied to any sequence that is edited. If m\_global\_seq\_feature\_save is false, this variable is stored, if used, in the meta-data for the sequence to which it applies, and, again, is tagged with the control tag c\_musicscale.

#### 13.74.7.14 m\_seqedit\_key

```
int seq64::user_settings::m_seqedit_key [private]
```

Its default value is SEQ64\_KEY\_OF\_C. Although this value is now stored in the user\_settings class, it always comes from the currently loaded MIDI file, if present. If m\_global\_seq\_feature\_save is true, this variable is stored in the "proprietary" track at the end of the file, under the control tag c\_musickey, and will be applied to any sequence that is edited. If m\_global\_seq\_feature\_save is false, this variable is stored, if used, in the meta-data for the sequence to which it applies, and, again, is tagged with the control tag c\_musickey.

#### 13.74.7.15 m\_seqedit\_bgsequence

```
int seq64::user_settings::m_seqedit_bgsequence [private]
```

Its default value is SEQ64\_SEQUENCE\_LIMIT. Although this value is now stored in the user\_settings class, it always comes from the currently loaded MIDI file, if present. If m\_global\_seq\_feature\_save is true, this variable is stored, if it has a valid (but not "legal") value, in the "proprietary" track at the end of the file, under the control tag c\_backsequence, and will be applied to any sequence that is edited. If m\_global\_seq\_feature\_save is false, this variable is stored, if used, in the meta-data for the sequence to which it applies, and, again, is tagged with the control tag c\_backsequence.

#### 13.74.7.16 m\_use\_new\_font

```
bool seq64::user_settings::m_use_new_font [private]
```

By default, in normal mode, the new font is used. In legacy mode, the old font is used.

13.74.7.17 m\_allow\_two\_perfedits

```
bool seq64::user_settings::m_allow_two_perfedits [private]
```

Defaults to true.

13.74.7.18 m\_h\_perf\_page\_increment

```
int seq64::user_settings::m_h_perf_page_increment [private]
```

The value used to be hardwired to 1 (in four-measure units), now it defaults to 4 (16 measures at a time). The value of 1 is already covered by the scrollbar arrows.

13.74.7.19 m\_v\_perf\_page\_increment

```
int seq64::user_settings::m_v_perf_page_increment [private]
```

The value used to be hardwired to 1 (in single-track units), now it defaults to 8. The value of 1 is already covered by the scrollbar arrows.

13.74.7.20 m\_progress\_bar\_colored

```
int seq64::user_settings::m_progress_bar_colored [private]
```

This value is no longer hardwired in the gui\_palette\_gtk2 module to be red. Now we want to let the color select from a slightly large palette. We chande this from a boolean to an integer to allow the selection of more colors.

13.74.7.21 m\_progress\_bar\_thick

```
bool seq64::user_settings::m_progress_bar_thick [private]
```

2 pixels. It isn't useful to support anything thicker.

13.74.7.22 m\_inverse\_colors

```
bool seq64::user_settings::m_inverse_colors [private]
```

Not all colors are reversed, though.

13.74.7.23 m\_window\_redraw\_rate\_ms

```
int seq64::user_settings::m_window_redraw_rate_ms [private]
```

Not all windows use this yet. The default is 40 ms (c\_redraw\_ms, which is 20 ms in Windows builds)), but some windows originally used 25 ms, so beware of side-effects.

#### 13.74.7.24 m\_use\_more\_icons

```
bool seq64::user_settings::m_use_more_icons [private]
```

If set to 1, icons will be used for more buttons. This setting affects only a few buttons so far, such as the buttons at the top of the main window.

## 13.74.7.25 m\_text\_x

```
int seq64::user_settings::m_text_x [private]
```

The m\_text\_x and m\_text\_y constants help define the "seqarea" size. It looks like these two values are the character width (x) and height (y) in pixels. Thus, these values would be dependent on the font chosen. But that, currently, is hard-wired. See the m\_font\_6\_12[] array for the default font specification.

However, please not that font files are not used. Instead, the fonts are provided by two pixmaps in the src/pixmap directory: font\_b.xpm (black lettering on a white background) and font\_w.xpm (white lettering on a black background).

We have added black-on-yellow and yellow-on-black versions of the fonts, to support the highlighting of pattern boxes if they are empty of actual MIDI events.

We have also added a set of four new font files that are roughly the same size, and are treated as the same size, but look smooth and less like a DOS-era font.

The font module does not use these values directly, but does define some similar variables that differ slightly between the two styles of font. There are a lot of tricks and hard-wired places to fix before further work can be done with fonts in Sequencer64.

## 13.74.7.26 m text y

```
int seq64::user_settings::m_text_y [private]
```

#### 13.74.7.27 m\_seqchars\_x

```
int seq64::user_settings::m_seqchars_x [private]
```

The m\_seqchars\_x and m\_seqchars\_y constants help define the "seqarea" size. These look like the number of characters per line and the number of lines of characters, in a pattern/sequence box.

# 13.74.7.28 m\_seqchars\_y

```
int seq64::user_settings::m_seqchars_y [private]
```

#### 13.74.7.29 m\_midi\_ppqn

```
int seq64::user_settings::m_midi_ppqn [private]
```

This variable replaces the global ppqn. The default value of this setting is 192 parts-per-quarter-note (PPQN). There is still a lot of work to get a different PPQN to work properly in speed of playback, scaling of the user interface, and other issues. Note that this value can be changed by the still-experimental –ppqn option. There is one remaining trace of the global, though: DEFAULT\_PPQN.

13.74.7.30 m\_midi\_beats\_per\_measure

```
int seq64::user_settings::m_midi_beats_per_measure [private]
```

This variable will replace the global beats per measure. The default value of this variable is SEQ64\_DEFAULT\_← BEATS\_PER\_MEASURE (4). For external access, we will call this value "beats per bar", abbreviate it "BPB", and use "bpb" in any accessor function names. Now, although it applies to the whole session, we should be able to continue seq24's tradition of allowing each sequence to have its own time signature. Also, there are a number of places where the number 4 appears and looks like it might be a hardwired BPB value, either for MIDI purposes or for drawing the piano-roll grids. So we might need a couple different versions of this variable.

13.74.7.31 m\_midi\_beats\_per\_minute

```
int seq64::user_settings::m_midi_beats_per_minute [private]
```

This variable will replace the global beats per minute. The default value of this variable is DEFAULT\_BPM (120). This variable should apply to the whole session; there's probably no way to support a diffent tempo for each sequence. But we shall see. For external access, we will call this value "beats per minute", abbreviate it "BPM", and use "bpm" in any accessor function names.

13.74.7.32 m\_midi\_beat\_width

```
int seq64::user_settings::m_midi_beat_width [private]
```

This variable will replace the global beat\_width. The default value of this variable is DEFAULT\_BEAT\_WIDTH (4). Now, although it applies to the whole session, we should be able to continue seq24's tradition of allowing each sequence to have its own time signature. Also, there are a number of places where the number 4 appears and looks like it might be a hardwired BW value, either for MIDI purposes or for drawing the user-interface. So we might need a couple different versions of this variable. For external access, we will call this value "beat width", abbreviate it "BW", and use "bw" in any accessor function names.

13.74.7.33 m\_midi\_buss\_override

```
char seq64::user_settings::m_midi_buss_override [private]
```

This variable replaces the global buss-override variable, and is set via the command-line option -bus.

13.74.7.34 m\_total\_seqs

```
int seq64::user_settings::m_total_seqs [private]
```

13.74.7.35 m\_seqs\_in\_set

```
int seq64::user_settings::m_seqs_in_set [private]
```

This value is  $4 \times 8 = 32$  by default.

Warning

Currently implicit/explicit in a number of the "rc" file and rc\_settings. Would probably want the left 32 or the first 32 items in the main window only to be subject to keystroke control. This value is calculated by the normalize() function, and is *not* part of the "user" configuration file.

```
820
13.74.7.36 m_gmute_tracks
int seq64::user_settings::m_gmute_tracks [private]
This value is not part of the "user" configuration file; it is calculated by the normalize() function.
13.74.7.37 m_max_sequence
int seq64::user_settings::m_max_sequence [private]
It is a derived value, and not stored in the "user" file.
m_max_sequence = m_seqs_in_set * m_max_sets;
13.74.7.38 m_seqarea_x
int seq64::user_settings::m_seqarea_x [private]
Compare these two constants to m_seqarea_seq_x(y), which was in mainwid.h, but is now in this file.
13.74.7.39 m_seqarea_y
int seq64::user_settings::m_seqarea_y [private]
13.74.7.40 m_seqarea_seq_x
int seq64::user_settings::m_seqarea_seq_x [private]
These are used only in the mainwid module.
13.74.7.41 m_seqarea_seq_y
int seq64::user_settings::m_seqarea_seq_y [private]
13.74.7.42 m_mainwid_x
int seq64::user_settings::m_mainwid_x [private]
```

Affected by the m\_mainwid\_border and m\_mainwid\_spacing values.

(c\_seqarea\_x + c\_mainwid\_spacing) \* c\_mainwnd\_cols c\_mainwid\_spacing + c\_mainwid\_border \* 2

c\_mainwid\_x =

```
Generated by Doxygen
```

13.74.7.43 m\_mainwid\_y

```
int seq64::user_settings::m_mainwid_y [private]
```

13.74.7.44 m\_save\_user\_config

```
bool seq64::user_settings::m_save_user_config [private]
```

Normally, this state is not saved. It is not saved because there is currently no user-interface for editing it, and because it can pick up some command-line options, and it is not right to have them written to the "user" configuration file.

(The "rc" configuration file is a different case, having historically always been saved, and having a number of command-line options, such as JACK settings that should generally be permanent on a given system.)

Anyway, this flag can be set by the –user-save option. This setting is never saved. But note that, if no "user" configuration file is found, it is then saved anyway.

13.74.7.45 mc\_min\_zoom

```
const int seq64::user_settings::mc_min_zoom [private]
```

It's value is 1.

13.74.7.46 mc\_max\_zoom

```
const int seq64::user_settings::mc_max_zoom [private]
```

It's value was 32, but is now 512, to allow for better presentation of high PPQN valued sequences.

13.74.7.47 mc\_baseline\_ppqn

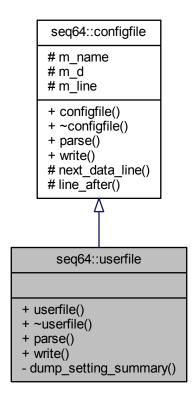

```
const int seq64::user_settings::mc_baseline_ppqn [private]
```

This value is necessary in order to keep user-interface elements stable when different PPQNs are used. It is set to DEFAULT\_PPQN.

# 13.75 seq64::userfile Class Reference

Supports the user's  $\sim$  /.config/sequencer64/sequencer64.usr and  $\sim$  /.seq24usr configuration file

Inheritance diagram for seq64::userfile:

# **Public Member Functions**

• userfile (const std::string &a\_name)

Principal constructor.

• ∼userfile ()

A rote destructor needed for a derived class.

• bool parse (perform &a\_perf)

Parses a "usr" file, filling in the given perform object.

bool write (const perform &a\_perf)

This function just returns false, as there is no "perform" information in the user-file yet.

# **Private Member Functions**

• void dump\_setting\_summary ()

Provides a debug dump of basic information to help debug a surprisingly intractable problem with all busses having the name and values of the last buss in the configuration.

# **Additional Inherited Members**

## 13.75.1 Constructor & Destructor Documentation

#### 13.75.1.1 userfile()

#### **Parameters**

name

Provides the full file path specification to the configuration file.

```
13.75.1.2 ∼userfile()
```

```
seq64::userfile::~userfile ( )
```

#### 13.75.2 Member Function Documentation

## 13.75.2.1 parse()

This function opens the file as a text file (line-oriented).

#### **Parameters**

a\_perf The performance object, currently unused.

#### Returns

Returns true if the parsing succeeded.

Implements seq64::configfile.

# 13.75.2.2 write()

# **Parameters**

*a\_perf* | The performance object, currently unused.

## Returns

Returns true if the writing succeeded.

Implements seq64::configfile.

13.75.2.3 dump\_setting\_summary()

void seq64::userfile::dump\_setting\_summary ( ) [private]

Does work only if PLATFORM\_DEBUG is defined; see the user\_settings class.
